Chapter 1: Introduction

Welcome!

It is the dawn of the 24th century, and an interesting point in time for the human race. Fifth Age chronicles the dawn (perhaps more like early mid-morning) of humanity exploring the stars and getting into all manner of trouble, fraught with peril, excitement and drama. The science in this sci-fi is a little on the harder side than some might be used to and the adventure is a little pulpy, a perfect mix for the 5e DnD system.

Humanity’s first contact with alien life was a violent one, but fruitful. Equipped with the FTL technology of the alien civilization they encountered, humans could have eventually had the stars, but eventually is just never good enough. Pushing the boundaries of the technology, humans have spread farther, faster, than any species in recorded history, to the horror and dismay of other species who see humanity as a cancerous plague infecting the new frontier opened up by the enhanced Hyperdrive.

The solar system is divvied up by a smattering of old earth nation states, intent on keeping their grip on power while shadowy secret societies and mega corporations pull strings and manipulate events. Individual colonies might attempt to maintain their sovereignty, but eventually most bow to the will of the League of Starfaring Nations, or sell out to one of the licensed mega-corps.

The thin strands binding together dozens of newly settled worlds and old earth are the spacers, daring starfarers willing to brave the dangers of hyperspace to haul freight, information, and new colonists into the frontier. Thanks to the relativistic time effects of hyperspace, these career spacers will age only a few short years while decades pass on the planet of their birth, meaning they must cast aside their old ties to friends and family, becoming a new type of culture all to themselves. Fifth Age is the story about these courageous adventurers, intrepid explorers and ruthless mercenaries, pushing the light of humanity into the deep darkness, and finding wealth, glory and adventure.

Do you have what it takes to turn your back on the planet of your birth, and leave everyone you’ve ever known to die of old age while you step onto alien worlds, and see things no human ever has?
Chapter 2:
Character Creation

Character creation in Fifth Age follows a series of simple steps:

1. **Assign Ability Scores**
2. **Choose a Species** (and a subrace, if applicable)
3. **Choose a Class**
4. **Choose a Background**

1. **Assign Ability Score**
   
   This system assumes character creation will use a point buy system, to ensure even and balanced characters in the hands of players. This system is outlined in the core handbook and SRD, this chart is provided for ease of use. 27 is a good point value to start with, allowing a character to have three glowing strengths and three noticeable weaknesses. (15,15,15,8,8,8), or whatever you would like. Note that the standard array is 15,14,13,12,10,8. These numbers for point buy are before applying any racial, background or other character creation bonuses. Keep in mind you cannot buy a higher base ability score than 15, but racial bonuses can push it beyond that. Also, remember that characters have a maximum of 20 in each ability score, unless that is somehow raised, such as by certain races.

   For a change of pace you can use a standard 52 card deck of playing cards to generate your ability scores. Using this method, deal out two cards for each ability score, and decide which of these totals are high enough to suit your adventurousness, and which you need to up. You can deal up to three more cards into each ability score, counting all totals according to the following chart. Remember, total whatever the hand would be (like blackjack) but only pay attention to the one’s place (the 5 in 25, the 4 in 34) and add this to a base ability score of 6.

   ![Baccarat Card Values](image)

   **Examples**
   - 3 4 ♥ = 7
   - 9 8 9 ♥ = 4
   - 6 7 2 ♥ = 2

2. **Choose a Species**
   
   Your character’s species is major component of their mechanical and flavorful identity, and selecting the appropriate species to suit your concept and needs is vital. Note that most species alter your ability scores, provide abilities, and some even offer subrace options for further specialization and identity.

3. **Choose a Class**
   
   Your choice in class is the single most defining choice you will make in character creation. Your class represents your archetypal path in the world, and defines your characters core capabilities and focus. Classes have a variety of specializations, so the decision you make now is important, but remember to look ahead at where you are eventually going, specializations can change the face of a class into something you might have never suspected.

4. **Choose a Background**
   
   Backgrounds in Fifth Age come with noticeable mechanical benefits as well as implied roleplaying ones, and offer your character even more chances to become specialized, flavorful, and unique. Most backgrounds provide proficiencies in tools, skills or even weapons and armor.

   Note that if a background offers you a choice between something you are proficient in already and something you are not, you must select the thing you are not proficient in. There might be overlap, granting you proficiency in something with which you are already proficient, in this case you can suggest an alternative proficiency to your DM, and pending their approval take that instead.
Chapter 3: Species

The focus of this work is human centric, and will focus on the mostly likely characters to sign aboard human built star ships headed for the human frontier. Fermi had it all wrong, and there’s a strong argument for some intelligent design out there, the galaxy seems to be teeming with life compatible with our own, just waiting to be… Discovered. That being said, this work assumes a campaign fairly early in human expansionism, and there is not a lot of species diversities in earth’s fleets quite yet.
Human

A species of sapient mostly hairless ape native to the third planet of the Sol system, commonly known as Terra to the rest of the galaxy, or as Earth to its natives in English.

Manifest Destiny
Not unlike a virus, humanity has spread out from its point of origin for most of its existence, a trend that has begun to accelerate exponentially with the discovery of the Hyperdrive.

Master Survivors
Clever and adaptable, Humans show a propensity for overcoming challenges, and are quite adaptable, both mentally and physically, after taming all the native biomes of their homeworld they are now moving on to similarly adapt or adapt to the new environments they meet, planetary, political, and perhaps most ominously economical.

Military Minded
Not the most aggressive species encountered by explorers, Humans are unique in that they are disturbingly well organized with their aggression, putting technologies to work offensively in undreamt of fashions all in the name of their ideal of ‘Weaponization’, to convert every known scientific principle of the universe to work as a tool for warfare.

Diverse but Indivisible
Having dozens, or perhaps hundreds, of political entities and organizations, the humans compete with each other, making war on their own species, over things like the color of their flags, or preferred language. Despite this fractious community even the most aggressive and territorial of human groups will unite against a common outside antagonist.

Human Names
Humans generally have two physical sexes for reproductive purposes, and naming conventions differ amongst these groups with the exception that an individual usually has a single primary name and a name marking it as member of a larger genetic grouping of relatives.

Male Names: Jack, William, Liam, David, James, Wei, Omar, Aarav, Alexander

Female Names: Olivia, Emma, Sofia, Chloé, Madison, Fatima, Jing, Aadhya, Anastasiya

Surnames: Smith, Johnson, Jones, Williams, Brown, Rodriguez, Wang, Li, Patel, Smirnov

Human Traits
Humans are highly adaptable with a deep pool of genetic diversity to pull from, and few generalizations can be made of them.

Adaptability: Humans can add +1 to two separate ability scores.

Age: Humans reach adulthood in their late teens, and rarely live more than a century.

Size: Humans vary wildly in size, from under 5 feet, to nearly 7 feet in height. Regardless, humans have a size of Medium.

Speed: A human’s base walking speed is 30 feet.

Diverse Education: Choose a single skill or Tool and gain proficiency in it.

Languages: Human characters speak, read and write their native language and English.

Subrace: Humans exhibit a wide variety of naturally evolved biodiversity, but the effects of genetic engineering and culture have had a profound influence on the species, effectively resulting in several noticeable subraces.
Cyborg
Cybernetically augmented from before birth, these humans have integrated technological components into their bodies, offering them possibilities denied to their purely biological brethren.

**Ability Score Increase**: +1 to any ability score

**Mind Machine Interface**: You possess an MMI port that allows you to directly interface with technology. You permanently possess a computer interface, and when connected to a compatible device or system with which you are proficient, increase your proficiency bonus by +1 if relevant. (Note that this ability affects Robot Control Interfaces, effectively increasing your total CP of controlled robots by 1.)

Spaceborn
Genetically modified for life in space, this type of human is particularly adapted for life with wide gravity tolerances (from 0 to 3 g), and high radiation environments. Notable for a complete lack of body hair and a lower body temperature, as well as a host of other minor changes.

**Ability Score Increase**: +1 Dexterity

**Slow Metabolism**: Gain Resistance to Radiation damage, and advantage on saving throws against radiation effects.

**Environmental Resistance**: This character can ignore penalties for high gravity up to 3g.
Earthborn
You are notable not for genetic or technological augmentation but rather for the lack of them. As a normally born human, raised to adulthood on earth herself, you had the chance to study the latest technologies, attend the most ancient of universities, and to be in the very heart of human culture, granting you opportunities and experiences no other human possesses.

Wealth of Experience: This character can choose an additional background to represent their life experiences. Some backgrounds might not be suitable for this feature, and require DM approval.

Tube Born
Designed in a lab, with certain traits in mind, you were born of genetic experimentation and scientific funding, not biological parents. You can look in the mirror knowing that you are exactly what your creator wanted you to be.

Ability Score Increase: +1 each to two different ability scores.
Synthetic

Created and built, these synthetic life forms are sentient, sapient, and one would certainly hope, completely loyal to the species who created them.

Digital Sentience

These are more than simple automatons and machines, and possess free will and intelligence, or a simulation thereof so realistic we can’t tell the difference and had to give them rights.

Software Souls

Synthetic intelligence is stored within their software, and with proper preparation can be retrieved or stored in compatible systems. Whether restarting this software, or backing up and restoring its originator, constitutes as ‘death’ is a matter up for some debate.

Ownership

Under human law, synthetics owe their builders the cost of the manufacture of their chassis plus interest to be paid back by any party holding their contract, which with very long terms and planned obsolescence means that very few synthetics fully own their own chassis, and those that do often continue in the roles they were initially set to serve.

If you prick them, do they bleed?

On Earth, Synthetics have won their rights as sapient free citizens. This has resulted in several outcomes, new production of full synthetics has nearly come to a halt, this is in favor of simply building less advanced robotics and drones which have greatly reduced capabilities, but none of those pesky human rights. Additionally, the hobbling programming in most synthetics has been removed by law, removing from them the hard coded requirements to follow “three laws” programming. This unprecedented level of freedom has had the unfortunate side effect of making humans far less likely to trust synthetics.

Synthetic Names

Synthetics are given an alphanumeric serial number upon manufacture which is tied to their software, and possess a chassis with a model name and number. Synthetics will often take a name comfortable for their creators, or indicative of their purpose, usually gifted by the humans closest to them.

Serial Numbers: 9CG8VNC9QXB9, 7E2RZDGCNZN6, L3FSYVUBJ46F, V7TVVU6K4TGC, EPRBXVKQDEEM, DAHTP4QI69B5

Chassis Models: ZV-9 Maintenance Worker, Butler 1400 Personal Service, Rhotech Industries Rocket Technician, Alyssa 6900 Human Companionship Interface

Nicknames: Clicky, Clanks, Mr. Handy, Mecha-Mop, Bobby, Alley, Chromedome

Synthetic Traits

Age: AIs take up to six terran months to be evaluated and deployed, and a chassis can spend long periods between manufacture and deployment, but rarely more than a year. Synthetic chassis can last up to several decades, and no AI has yet perished of entropic decay.

Size: Synthetic chassis can be constructed in almost any conceivable shape and size to serve their intended purpose, but most shipboard robots are similar in size to humans, ranging between 4 and 6 feet tall, often noticeably shorter than the humans that construct them. Regardless, Synthetics are size Medium.

Speed: Most synthetics are humanoid, and have a walk speed of 30 feet.
**Infravision:** Most synthetics can see in the infrared spectrum, effectively seeing in the dark.

**Self-Repairing Mechanism:** Constructed of smart materials and with limited onboard production capabilities, Synthetics can heal themselves similarly to an organic character using hit dice during short rests. However, once these hit dice are gone, they must be restored by a long rest as normally, but require additional repair materials weighing one pound per hit die (1 credit per pound).

**Well Made:** Designed for durability, Synthetics gain an additional 4 starting HP and 4 HP on leveling up, regardless of their class.

**Inorganic:** Synthetics are not alive in the traditional sense, and are immune to most disease and infections, and do not require sleep or food and water. Synthetic characters are immune to Poison and Radiation damage, and cannot gain the Poisoned condition or disease. When a synthetic is reduced to 0 HP, it is disabled, and can only be restored with an appropriate ability check.

**Charging Requirements:** Synthetics rely on external power sources for their energy needs, and must be recharged as part of their daily duty cycle, requiring access to a sufficient power source at least once per day for optimal operation. Storing energy sources for a Synthetic travelling away from its normal power sources is no more difficult than carrying food and water for a biological creature, and generally take up less weight than that food and water.

**Legacy of Service:** Despite their freedoms, synthetics were originally created to serve mankind, and their core programming reflects this. Synthetics are strongly motivated at a “subconscious” level to protect and serve humanity and when acting to directly save a human life, they gain advantage on any ability checks made in this pursuit.

For fear of mechanical imbalance, limit this ability to times of appropriate dramatic tension. (Checks to stabilize, athletics to push someone out of the way of danger, etc)

**Languages:** Synthetics speak the language of their manufacturers, English, and Tradespeak.

**Chassis**

Synthetics require a chassis to operate in meatspace, built to various specifications for different purposes.

---

**Optional Rule: Modular Chassis**

It might be possible to swap the AI that effectively “is” a synthetic into a wholly new chassis. This would involve removing the benefits of the old chassis, and adding the benefits of the new one.

Allowing this kind of modularity in synthetics can be exciting and add a lot of depth to them as characters, making them more unique and not just “people in robot suits”, but can have some game balancing side effects, so think it through very carefully first, and consult with your DM.

An average chassis might cost 2,500 credits, a sizeable expense for working class synthetics.
**Laborer Model**

Built for heavy lifting, you are like a cross between a longshoreman and a forklift. You gain +2 Strength and +2 Constitution, and proficiency with your built-in repair kit.

**Service Model**

Designed for human interaction, these models have more processing power and better emotion emulators and motile facial features. You gain +4 Charisma, and proficiency with Persuasion.
Tech Model
You were designed to aid in the gathering and processing of data, general research, and to assist in technical tasks. You gain +2 Intelligence and +2 Wisdom, and gain proficiency with any two skills, toolkits or systems.

Security Model
Protecting humanity sometimes means pacifying them with force, for their own good of course, and you were designed to do this with the minimum amount of risk to human safety. You gain +2 Dexterity, and proficiency in Law.
Greylien

The K'Titch'Zaa first visited earth many millennia ago, and have kept up a fitful watch over us for much of the time since. Looked down on by the rest of Galactic Society as lacking in advancement and making no contributions to society, they were given the very least priority for colonization and resource extraction, and few species had any interest in trade with them. All of that changed when their compassion saved the crew of humanity’s first doomed expedition to a neighboring star. Known from that day to this as Greys, or Grey Aliens, and now commonly Greyliens, the K'Titch'Zaa have become humanity’s only true alien ally.

Scavengers

Evolved from scavengers, Greyliens can consume almost any organic compounds and possess stout digestive systems that can even ignore the handedness of DNA. Given their diet of carrion and a weak technological base (seeing as their home system is particularly resource poor, and their homeworld can barely support life), this species has very little to offer galactic society, and have taken scavenging to space, travelling world to world, carving out niches in other cultures performing the most unsavory of work, and making do with the cast offs and leftovers of other civilizations, often acquired at extortionist prices.

Masters of Resourcefulness

Greyliens maintain their space presence through a mastery of salvaging, pilfering, and jury rigging. Greyliens have struggled for millennia to maintain their tenuous presence in space, stubbornly refusing to give up the stars, which led to their first assisting humans, whom they viewed as similar underdogs.

Not that Alien

Roughly Humanoid, oxygen breathing, left handed amino acids, similar tolerances, this species stepped straight out of science fiction and myth and into the limelight of earth’s public stage, and serve to this day as an example of aliens that humans can interact with sensibly and positively. There are some claims to genetic engineering and abductions with the Greyliens claiming that their government has no knowledge of such events, and would have strictly forbade them.

Seeing as the rescue of the lost human expedition that led to our receiving the Hyperdrive was likewise forbidden, these denials raise more eyebrows than questions.

Galactic Enemy #1

As humanity’s advanced Hyperdrive wreaks havoc on untold millennia of economic stability, casting the fortunes of worlds and billions of lives into turmoil, galactic society fractures and the Greyliens make excellent targets for blame. Greyliens are damned as provocateurs, would be conquerors, anarchists, traitors, collaborators and worse by the rest of galactic society. Their close ties with humanity and seeming new wave of prosperity seem almost too good to be true, if you can ignore the rest of the galaxy hating them...

Greylien Names

Greyliens reproduce asexually, communally raising young and possess a name granted at the time they reach majority by the rest of their community, in addition to a surname derived from the community they hail from.

Given Names: Z’Kee, F’Chuk’K’Ka, St’lee, Rik’Tik’T’Chek

Clan Name: Olee, Qoosoo, Rolloo, Gree,
Race Traits

**Ability Score Increase**: +1 Dexterity, +1 Wisdom

**Age**: Greyliens mature in their early teens, and rarely live more than 50 or 60 years of age.

**Size**: Greyliens range from as little as 3 feet tall to as much as 6 feet tall, depending on nutrition and living conditions. Depending on subrace Greyliens are Small or Medium.

**Speed**: Greyliens have a move speed of 40 feet.

**Titanium stomach**: Greyliens cannot receive the poisoned condition, and are resistant to poison damage.

**Natural Survivor**: Gain proficiency with Repair Kits, and the Survival skill.

**Master of Improvisation**: A Greylien may modify a weapon or armor as if applying a mod (found in chapter 8). Only its creator may make use of the equipment once modified in this way. This does not count as a normal mod of any MK level, but cannot stack unless mods of this type normally do so. This modification costs no credits, as it is done with scrap and scavenged components.

**Languages**: You can speak, read, and write Greylien, Tradespeak, and one other language.

**Subrace**: Greyliens are members of one of several distinct racial groups.

---

**Shorts**

These diminutive Greyliens are timid and cautious, particularly quiet, and are excellent mechanics.

**Ability Score Increase**: +1 Intelligence

**Just a Shadow**: You are size small, and gain proficiency in stealth. You can attempt a stealth check while only lightly obscured, such as behind another creature.

---

**Talls**

Up to twice the height of Shorts, Talls are medium sized, and noticeably sturdier than the rest of their kin.

**Ability Score Increase**: +2 Constitution

**Hands On**: Gain proficiency in one weapon, toolkit, or in planetary vehicles or spaceships.
**Friendlies**

Adaptable and outgoing, often called little green men, these aliens are known for their servile natures and easygoing ways. Gracious and even charming, these aliens have made their way into human and galactic society in many ways.

*Ability Score Increase:* +1 Charisma

*Non-Threatening:* You are size small, gain proficiency with Persuasion, you can end your turn inside a friendly creature’s space, and receive half cover (hard) while they are at least one size larger than you.

**Newcomer**

In the wake of the Greylian’s troubles, many came to earth as refugees, bringing with them a bounty of technological knowledge and finding a level of acceptance and prestige they had never before experienced in the worlds of the Galactic Hegemony. These Greyliens have settled into their new home with fervor, and see the friendship of humans as key to the survival of their race and view even at the cost of their own culture being subsumed by that of their hosts as a small price to pay.

*Ability Score Increase:* +2 Wisdom

*Hero Worship:* When you use the Help action to assist a human with a task, you may add your proficiency bonus to the roll as well as granting advantage.
Alien

The universe is teeming with alien life, and a fair amount of it has clawed its way up the evolutionary ladder to sapience, meaning that explorers will meet countless examples of alien species if they travel far enough, long enough.

Generally Humanoid

Alien lifeforms run the gamut from the vaguely humanoid, to the truly exotic and bizarre. Generally speaking, only the most human like and compatible of these lifeforms will be of interest to humans, especially as travelling companions. View the amount of bipedal oxygen breathing species listed here not as an endorsement for that type of life, but rather as the criteria requirements for potential crewmembers on the human ships that this work is aimed at chronicling the adventures of.

Social Animals

The types of alien species most likely to throw their lot in with the humans and travel alongside them will have descended from social animals, and have a clear understanding of chain of command and power structure, as well as a willingness to work with other species and attempt to understand them.

Adaptable

Life with humans isn’t easy, even for other humans, imagine how adaptable an alien has to be to learn to live and work beside them. The aliens listed here will be able to tolerate similar environments and conditions as humans, often sharing food and breathable atmosphere. Just the ability to tolerate human psychology and work with them is a mark of an adaptable species, making these species exceptional.

Endless Diversity

There is always a new species to meet out there, always a new take on alien life, by no means consider these species options the only ones available. Work with your DM to convert fantasy races into aliens, or to stat out your favorite bizarre alien creature from another property. Your imagination is the only limit.

Alien Names

Alien names will be quite varied, and often unpronounceable, don’t be afraid to go by your alien character’s human nickname. Otherwise, delve deep into your imagination and find what type of name the alien might have. If that’s intimidating, you might want to stick to Human characters.
Alien Traits

Aliens have a wide variety of traits, too diverse to list here, that will be listed in their individual entries.

**Age:** Most aliens reach maturity in 8-30 years, and have a lifespan of rarely more than a century or two.

**Size:** Aliens vary wildly in size, from under 3 feet, to nearly 9 feet in height. Most aliens have a size of Medium.

**Speed:** Most aliens have a base walking speed of 30 feet.

**Languages:** Aliens speak, read and write their native language, Tradespeak, and one human language of their choice. (Unless you want to be a jerk and skip the human language part, while that would make roleplay complex and rewarding.)

**Stoph (Slugmen, Sluggos)**

The Stoph are a species of gastropoidal aliens native to a system deep in the zone of influence of the Galactic Commonwealth. Humans encountered several large colonies of the Stoph on the edge of our space where they languished on the commonwealth frontier and quite cheerily accepted humanity’s offers of relative freedom under the colonial charter of the League of Starfaring Nations. Stoph make excellent pilots, and have found myriad opportunities on independent and corporate ships operating the galactic frontier.

Stoph are hermaphroditic, and reproduce seasonally by paired mating, a relationship that rarely lasts more than the season, but which can sometimes last decades before suddenly ending.

Stoph can vocalize a wide range of sounds, and can speak human languages with ease. Stoph consume liquid water and a mostly herbivorous diet, and can acclimate to an oxygen mix atmosphere comfortable to humans. Gravity preference lies in the .8 to 1.3 range, but with few drawbacks for gravities up to 2.2, or atmospheric up to 3 atmospheres.

**Ability Score Increase:** Stoph characters have particularly keen senses and are curious and introspective, increasing their starting wisdom by +4 and their maximum wisdom by +4.

**Unique Senses:** Stoph can see in a much wider spectrum than humans, effectively able to see anything three dimensional within a range of 60 feet.

Stoph characters gain proficiency with the perception skill.

**Wallcrawlers:** Stoph have a climb speed equal to their movement speed.
Tiel (Greens, Treebeards)

The Tiel are humanoids that exist symbiotically with a barky plant that covers their skin. While being (fairly) close to mammals, the plant component of their physiology offers several interesting benefits. Able to survive up to three months without food thanks to photosynthesis, and several hours without air, the Tiel are a particularly hardy species. Omnivorous, Tiel consume less than one might expect for beings of their bulk, but are often driven to taste anything they encounter that might be edible.

Tiel possess two sexes with and mate for life. Females bear live young after a gestation period of over a year, and hours after birth their young are capable of ingesting fruit pulp, their primary diet for some time.

Tiel have rough gravelly voices, and can emit sound well below the human range of hearing. Passable at speaking human languages, one never mistakes a Tiel for another species over audio comms. Tiel prefer a higher oxygen mix than humans, but with dietary supplements can tolerate a 21% oxygen atmosphere. The Tiel thrive in high gravity environments and are quite comfortable at up to 3 gravities, but suffer from prolonged exposure to zero gravity environments.

**Ability Score Increase:** Tiel are exceptionally hardy, increasing their starting constitution by +4 and increasing their maximum constitution by +4.

**Rough and Ready:** Tiel are protected by a barky coating of their plant symbiote, and their AC cannot be lower than 16 as a result. A number of times per day equal to their proficiency bonus, when a Tiel would take damage, they can reduce that amount by 1d6 plus their constitution modifier.
Gloemn (Treefs, Hoppers)

The Gloemn were first encountered by humans in a primitive state similar to earth’s stone age. Intelligent and adaptable, the Gloemn are no fools, despite their primitive background.

The Gloemn possess two sexes, and lay eggs that are alternatingly carried by either gender in an abdominal pouch until hatching, when the young are raised communally by all adult Gloemn. Socially motivated in their breeding practices,

Gloemn breeding pairs will reassess their partner’s status constantly, and break it to pursue better opportunities when they present themselves.

Gloemn have surprisingly pleasant tenor voices, and prize musical singing, their gravity tolerance is similar to humans, and require a much lower oxygen mix of only 12%, but can be acclimated up to normal human normal. Semi amphibious, a Gloemn can survive underwater by absorbing oxygen through its skin for several hours at a time.

*Ability Score Increase:* Gloemn reflexes and musculature are exceptional, increasing their starting and maximum dexterity by +2.

*Natural Athletes:* Gloemn gain proficiency in Athletics and can add their proficiency bonus twice on all checks to jump, climb or swim.

*Prodigious Leap:* Once per round, a Gloemn can use a bonus action to leap up to 20 feet horizontally or 10 feet vertically. This distance does not count against their movement for the round.

Daht (Apes, Squatch)

The Daht are a group of hulking humanoids with a penchant for violence and the reputation for the same. With no real worlds of their own, Daht mercenaries wander the galaxy finding service for up to generations at a time, serving as bodyguards, soldiers, and even just hired muscle. Although prone to emotional outbursts, one should never think a Daht is just big and dumb, because they would only be half right.

Daht have three sexes, with the males and females being almost indistinguishable, and a third gender that is only marginally intelligent. Females give live birth six weeks after fertilization by a male, and the third gender concentrates on early childhood development, producing milk and feeding the young while serving as vicious protectors of households.

Daht require very particular environmental requirements and suffer in extremes of heat or atmospheres with too little oxygen. Seemingly to have evolved on a world with significantly stronger gravity than earth, Daht are comfortable at up to three gravities. Human languages lie just at the outside edge of Daht vocalization, and while some sounds are difficult for them to make, a Daht will be understood, one way or another.
**Ability Score Increase:** Daht are veritable mountains of muscle, increase their starting and maximum Strength scores by +4.

**Menacing:** Daht characters gain proficiency in the Intimidation skill, and can add their strength bonus to Charisma (Intimidation) checks.

**Legendary Warriors:** Daht are natural born warriors, and pursue combat training most of their lives. Each round of combat a Daht can reroll the damage dice for a weapon attack, and keep either result.

---

**Custom Alien Species**

The universe is full of bizarre and unique life, just waiting to be discovered. Using this species option, you can create your own custom alien race and describe it how you like, pending DM approval. A custom alien is built by spending 12 AP (Ability Points) to purchase a variety of bonuses and capabilities off the following list:

**1 pts.**
- Increase an Ability Score maximum by +2
- +5 Feet of Movement (maximum +10 movement)
- Skill or Tool proficiency (Maximum of 2 tools and skills)

**2 pts. (Max. 6 pts.)**
- +2 Starting Str, Con, Int, Wis, Cha
- +1 Starting Dex
- Special movement mode (Climb, Swim, Glide) equal to movement

**4 pts.**
- Flight (equal to movement)
- BonusFeat orFeat Equivalent ability (Can only be chosen once)
Chapter 4: Class

The focus of this work is on a hard sci-fi setting of excitement and adventure, and not a simple number crunching game of character optimization. Six classes, each with three specializations seems quite sufficient, but don't let that stop you. Want to bring in a seven foot tall reptilian barbarian who owes your character a lifedebt, feel free. Half the classes from a normal fantasy RPG would work here just fine. Maybe you pick up a pack of approximately medieval grasshopper looking aliens who think you’re their messiah on a holy crusade, and make a really crack boarding party after you gave them power axes. Why not. If you pick up a magic using class and give them a laser sword, that’s on you, I tried to paint a hard sci-fi setting, and you know what you did. But hey, have fun with it.
Soldier

The harsh crack of weapons fire rings out over the already deafening bustle of the alien marketplace, and suddenly the various vendors and customers begin to panic and scream, adding to the cacophony. You ready your side arm and drop into the cover provided by a food vendor’s cart, and scan the crowd looking for the source of the disturbance. A chorus of terrified shrieks rise out of a crowd of alien priests on the far side of the market square, and you see a group of militants carrying rifles, one has a member of your crew by the arm and is saying something in its language to the crowd of panicking locals. It brandishes the weapon at the human, and you know it is time to act...

On a starship, soldiers fill roles as security and weapons officers, operating ships weapons and fighting during any action the crew becomes involved in. Whether it is animal threats on newly discovered worlds, or even opposition from other human groups, Soldiers stand ready to throw themselves into the line of fire to protect their less capable crew mates.

Soldiers easily make durable combat characters able to both dish out, and receive, punishment and interact dynamically in the field of battle. Soldiers shine in the Combat pillar of the game, with less to offer in peaceful situations, but no crew will regret having one along when it hits the fan, and only the soldier was keeping an eye on exits and was watching for an ambush.

Soldiers are the best class because they have the widest access to weapons and armor, the best military training, and are thus the most prepared to face the dangers of unexplored worlds, and keep their comrades safe.

Class Features

As a Soldier, you gain the following class features.

Hit Points
Hit Dice: 1d10 per soldier level
Hit Points at 1st Level: 10 + your Constitution modifier
Hit Points at Higher Levels: 1d10 (or 6) + your Constitution modifier per soldier level after 1st

Proficiencies
Armor: Protective Gear, Combat Armor
Weapons: Civilian Weaponry, Military Weaponry
Tools: Choose one of Weapons Systems or Space Vehicles as well as one Systems Proficiency
Skills: Choose two skills from Acrobatics, Athletics, History, Insight, intimidation, Perception, and Survival

Equipment
You start with the following equipment, in addition to the equipment granted by your background:
- Blaster Rifle or Laser Rifle and Power Axe
- Armored Skinsuit
- One of: Laser Pistol, Blaster Pistol or Combat Knife
- Spacer’s Kit or Explorer’s Kit
Second Wind
Beginning at 1st level you have a limited well of stamina that you can draw on to protect yourself from harm. On your turn, you can use a bonus action to regain hit points equal to 1d10 + your soldier level. Once you use this feature, you must finish a short or long rest before you can use it again.

Combat Focus
Starting at 2nd level, you adopt a particular style of fighting as your specialty. Choose one of the following options. You can't take a Combat Focus option more than once, even if you later get to choose again.

• **Defense Focus**
  While you are wearing armor, you gain a +1 bonus to AC.

• **Long Arm Focus**
  You gain a +1 bonus to attack rolls made with two handed ranged weapons.

• **Melee Focus**
  When you roll a 1 or 2 on a damage die for an attack you make with a melee weapon that you are wielding, you can reroll the die and must use the new roll, even if the new roll is a 1 or a 2.

• **Side Arm Focus**
  While wielding a one handed ranged weapon and no weapon in your off hand, you deal an additional 2 damage.

• **Two-Weapon Focus**
  When you engage in two-weapon fighting, you can add your ability modifier to the damage of the second attack.

• **Unarmed Focus**
  When you make an unarmed strike, add your proficiency bonus to the damage roll.

###Feat and Ability Score Improvement
When you reach 3rd level, and again at 6th and 9th level, you can increase one ability score of your choice by 2, or you can increase two ability scores of your choice by 1 up to your default maximum of 20. Additionally, you can choose one feat to gain or increase an ability score by 1, and increase its maximum by one instead.

###Extra Attack
Beginning at 5th level, you can attack twice, instead of once, whenever you take the Attack action on your turn.

###Battle Hardened
Beginning at 8th level, when you are reduced to 0 hit points but not killed outright, you can drop to 1 hit point instead. You can’t use this feature again until you finish a long rest. Additionally, your Second Wind class feature can be used as a reaction when taking damage.

###Soldier Specialization
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.
Marine
Marines are trained for direct personal combat, excelling at both executing and repelling boarding actions.

Improved Critical
Beginning when you choose this specialization at 4th level, your weapon attacks score a critical hit on an additional number on a d20, usually 19 or 20.

Additionally, you can choose a second option from the Combat Focus class feature.

Veteran
At 7th level, you can choose a third option from the Combat Focus class feature. You gain 10 maximum hit points.

Elite
Beginning at 10th level, you can attack three times, instead of once, whenever you take the Attack action on your turn. You gain 10 maximum hit points.

Gunner
Gunned focus on heavy, vehicle and starship based weapons, which explains why they are so prone to attempting to lug weapons of this grade into personal combat.

The Bigger the Better
Beginning when you choose this specialization at 4th level, you gain proficiency with all heavy and vehicle based weapons, as well as with demolitions kits. Increase by 1 the DC of all saving throws made against your attacks.

Precise Aiming
Beginning at 7th level, you add your proficiency bonus to all damage rolls made using weapons with which you are proficient.

Increased Payload
Beginning at 10th level, when you make an attack with a one handed ranged weapon, it deals an additional damage die of the type it normally deals. When you make an attack with a two handed ranged weapon it deals an additional two damage dice of the type it normally deals.
Mobile Infantry

Also commonly known as Ground Pounders and Shock Jocks, Mobile Infantry are specialists in using advanced armor suits to deploy into the most dangerous and threatening environments.

Without your suit, you are nothing

When you choose this specialization at 4th level, you gain proficiency with Repair Kits, and with Powered Armor and are able to requisition a Mobile Infantry Suit. While attuned to you, this armor provides the following abilities in addition to its basic statistics:

- This Armor has a pool of 20 Armor HP that are lost first when you would take HP damage. Whenever you take a short rest, recover 5 of these HP, all of them for a long rest.

- During a Short rest, you can spend a Hit Die to recover 10 + Intelligence bonus Armor HP.

- Whenever you gain a soldier Level, Increase your suit’s maximum Armor HP by 5.

Without you, your suit is nothing

Beginning at 7th level, whenever you use the Second Wind class feature, your Armor HP is recovered by 1d10 plus your soldier Level.

As a Bonus action you can execute an Action Surge, granting you an additional action this turn. You can use this ability again after a short or long rest.

War Face

Beginning at 10th level, you can select any two Modifications for your armor and apply them with no cost or limits, exceeding the normal amount of maximum modifications and amount of times a specific modification can be applied to a suit of armor.

New Armor: Mobile Infantry Suit

Powered Armor
Cost: $4,000 credits. AC 19, Minimum Strength requirement of 15, penalty to stealth checks while worn, vacuum safe, Special, Requires Attunement.

This prototype armor is bulky and quite heavy (weighing over 100 pounds) but does not contribute to your encumbrance while attuned, effectively carrying its own weight with hydraulic-assist technology. This armor counts as a heavy armor for the sake of any armor mods applied to it.

An optional Insertion or breaching pod capable of low orbit atmospheric insertions can be purchased for the cost of $1,200 credits. This device allows a single suit to land safely on a planetary surface, or breach a ship or station. It costs $200 credits to resupply this pod after it has been used, to return it to functionality for its next use.
As you stand clinging to the outside hull of the station, only your mag-boots keeping you from careening into the deep black, you see the device attached to the station’s metal skin. Your sniffer detects no increased ambient radiation, so it probably isn’t thermonuclear, that’s good. The casing comes off easily, and you discover more shielding, heating and insulation, and finally tanks of growth medium. Biological. You check your schematics, this is apparently tied into the water treatment plant. That is very bad. Disabling the device takes several minutes longer than you were hoping, but as you finish you get a priority message in your HUD, it’s the captain asking if you’re ready to move on to the other six devices. You hear explosions over the channel in the background, and decide not to complain as you make your way to the next waypoint.

On a starship, technicians fill the roles as science, medical and engineering personnel, solving problems and repairing the ship, its crew, or more often both. As engineers, scientists, doctors, mechanics... and a host of other roles, technicians are vital to the safety and wellbeing of their ship and crew, being relied upon constantly to create ingenious solutions to the countless problems that plague spacers.

Technicians are hardy enough to assist in the combat pillar, usually in a support role, but truly shine in exploration pillar, overcoming obstacles and creating innovative solutions to problems with their broad skill set.

Technicians are the best class because their mastery of science and technology prepares them for the unknowns in the depth of space, and logic and reasoning are mightier than bullets or brawn when it comes to solving the big problems.

Class Features
As a Technician, you gain the following class features.

Hit Points
Hit Dice: 1d8 per Technician level
Hit Points at 1st Level: 8 + your Constitution modifier
Hit Points at Higher Levels: 1d8 (or 5) + your Constitution modifier per Technician level after 1st

Proficiencies
Armor: Protective Gear
Weapons: Civilian Weapons
Tools: Choose one of Medkit, Repair Kit or Robot Control Interface, and any two Systems Proficiencies
Skills: Choose three from Biology, Computer Use, Engineering, History, Insight, Investigation, Medicine, Navigation, Perception

Equipment
You start with the following equipment, in addition to the equipment granted by your background:

- Stun Pistol or Laser Pistol
- Skinsuit
- Repair Kit or Medical Kit
- Computer Interface and Spacer’s Kit
Expertise
At 1st level, choose two of your skill proficiencies, systems proficiencies or tools you are proficient in the use of. Your proficiency bonus is doubled for any ability check you make that uses any of the chosen proficiencies. (Note that this has no effect on the amount of CP controlled with a Robot control interface)

Fast Hands
Starting at 2nd level, you can use a toolkit, item or skill that is normally an action as if its use was a bonus action. (Excluding robot commands, which are only bonus actions for Robomancers.)

Feat and Ability Score Improvement
When you reach 3rd level, and again at 6th and 9th level, you can increase one ability score of your choice by 2, or you can increase two ability scores of your choice by 1 up to your default maximum of 20. Additionally, you can choose one feat to gain or increase an ability score by 1, and increase its maximum by one instead.

Quick Thinking
Starting at 5th level, you can take two bonus actions per round.

Reliable Talent
Starting at 8th level, whenever you make an ability check using your proficiency bonus, treat all rolls of 9 or less as if you rolled a 10.

Technician Specialization
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.

Medic
Medics are trained medical professionals well versed in diagnosing and treating a variety of ailments and injuries.

First Responder
Starting at 4th level when you acquire this specialization, you gain proficiency with medkits if you are not already, or with medicine if you are proficient with a medkit, but not with medicine. If you are already proficient with both Medicine and Medkits, you may add your proficiency bonus to all of your ability checks to heal living creatures.
Additionally, whenever you use a medkit to heal or stabilize a living target, that creature can spend a number of its Hit Dice up to your proficiency bonus to heal itself.

**Hands that Heal**
From 7th level onward, whenever you use an action or bonus action to heal a target, you can add your proficiency bonus to the amount healed, and to each hit die spent by the target.

**Don’t you die on me!**
Starting at 10th level, whenever you allow a target to spend healing dice, they immediately regain a hit die that must be used immediately to heal themselves.

**Robomancer**
Self-styled ‘Robomancers’ are known for their skill with advanced robotics and artificial intelligence that borders on the arcane.

**Mechanical Minions**
Starting at 4th level, if you are not already proficient with Robot Control Interfaces, you gain proficiency with them. If you are already proficient with RCIs, you gain proficiency with repair kits, and if you are already proficient with them, gain proficiency with engineering instead. If you are already proficient with all of these, you may add double your proficiency bonus when making ability checks related directly to robots and synthetics.

Additionally, you can attune to and control an additional 1 CP worth of robotic minions and using a Robot Control Interface to issue commands is a bonus action for you.

**Best friend 2.0**
From 7th level onwards you can attempt to hack an enemy robot or synthetic as a bonus action using your robot control interface. The target gains the charmed condition and can only attack the Robomancer with a successful intelligence saving throw DC 8 plus the Robomancer’s intelligence bonus and proficiency bonus.

Whenever a creature you can see targets you or a friendly synthetic or robot within five feet of you, you can use a reaction to switch the locations of yourself and the creature, redirecting the attack to the creature of your choice moved in this way.

**Ghost in the Machine**
Starting at 10th level your robotic minions develop unique personalities of their own, and can behave on their own initiative at the DMs discretion.

Additionally, each robot you create gains a bonus feat of your choice upon attunement.

---

**RobotFeat: Mod Bot**
This feat can only be taken by robots affected by the “Ghost in the Machine” class feature of Robomancer Technicians. This Robot can have up to 1 CP of total modifications that do not affect its CP cost.
Mechanic
Mechanics apply their knowledge in a wide variety of sciences and technical aptitudes towards the repair and maintenance of starships, vehicles and equipment.

Intimate Knowledge
Starting at 4th level, you are now considered proficient in all ship’s systems and ship based weaponry and can manage two duty stations instead of one. You gain proficiency with repair kits if you lack it, or with engineering if you are proficient with repair kits but not with engineering. If you are already proficient with both of these, you may double your proficiency bonus when making checks related to spaceships.

Additionally whenever you use a repair kit to heal a synthetic target, that creature can spend hit dice to heal itself up to a maximum amount (of HD spent) equal to your proficiency bonus. Robots you repair recover an additional amount of HP equal to your Technician level.

Miracle Worker
From 7th level you can, as a bonus action, grant yourself advantage on your next attack roll, saving throw, or ability check.

Knack
Starting at 10th level you can use your Reaction to enhance the effectiveness of a system or device you operate. This adds your Intelligence bonus to the numerical bonus or output of the system or device, or doubles its effectiveness at DM’s discretion.

The Science of Today is the Technology of Tomorrow
The technician is potentially the most genre defining class presented in this document, harnessing the forces of the universe to create wonder, and more delicious soft drinks.

A technician might want to create gadgets, devices, and inventions, and should be encouraged in these aims. Adapting alien technology, using new materials, and just plain innovation are all good activities for technicians.

The class has the Fast Hands and quick thinking features for the express purpose of allowing technicians to better support their group, and utilize all those fantastic gizmos they should be well known for.

A general guideline when attempting to invent something is to not remake already existing objects, and to create devices that exist within reasonable power levels for game balance purposes. While innovation does occur, most of the numbers set forth herein are balanced for table play, and exist for a reason. Saying “I build a better gauss rifle” is all well and good, laudable, even, but saying “I build a gauss rifle that does d10s instead of d8s” is not only out of character, but flies in the face of game balance.

“Inventing” mods is very acceptable, or even researching new prototypes. But try to maintain the wonder and adventure of the setting by keeping these items on a smaller scale of production, this makes them (and by extension, you) more special.
Officer
You hear a scream and turn to see Jenkins go down in a spray of blood. You holster your pistol and rush to help. Jenkins is perforated through his suit, and you can see nothing but blood in his helmet. Jenkins is gone. You can't hold this position forever. You scan through your comms, Biggs says that it will be at least another ten minutes before the engines are warmed up to go, Scott reports two more of the bombs were disabled, that just leaves three, this might be doable. The motion detectors go off again, another group is coming down the corridor. You draw your pistol and check the charge, five shots remaining. You see Cortez trying to aim his rifle down the hallway but his hands are shaking, he's just a kid. You slap him on the shoulder and smile reassuringly, and tell him that everything is fine, we have this, but to make every shot count. His hands visibly steady, he nods and gulps. You sink into cover behind the barricade and take aim down the corridor. Who knows, maybe you weren't even lying.

Officers fill command positions, developing and implementing strategy and tactics, all the while administering to those under their command. Disciplined and charismatic, officers provide the structure and framework for work to get done, and missions to be completed, making sure that logistics are in place and always having another plan if things go wrong.

Officers are excellent in most pillars of gameplay in a support role, but can really shine in Social encounters, using their interaction skills to organize their fellows and work over outsiders. Officers can easily be skilled diplomats as well as leaders.

Officer is the best class because everyone looks to you for guidance and inspiration, making you a natural choice for leader. Whenever others can't quite succeed at what they try, you can enable them to.

Class Features
As an officer, you gain the following class features.

Hit Points
Hit Dice: 1d8 per officer level
Hit Points at 1st Level: 8 + your Constitution modifier
Hit Points at Higher Levels: 1d8 (or 5) + your Constitution modifier per Officer level after 1st

Proficiencies
Armor: Protective Gear
Weapons: Civilian Weapons
Tools: Choice of any two tool, systems, or vehicle proficiencies.
Skills: Choose three of Athletics, Acrobatics, Computer Use, Culture, Deception, History, Insight, Intimidation, Law, Navigation, Perception, Persuasion
Equipment
You start with the following equipment, in addition to the equipment granted by your background:

- Laser Pistol
- Skinsuit
- Any one Toolkit with which you are proficient
- Choice of Explorer’s kit or Spacer’s Kit

Leadership
From 1st level onwards, as a reaction, whenever an ally you can see has made an ability check, saving throw or attack, after the die has been rolled but before the results have been announced, you can (as a reaction) add your charisma bonus to that roll. This ability cannot be used on the same character more than once before you take a short or long rest.

Inspiration
Starting at 2nd level, you can inspire others through stirring words. To do so, you use a bonus action on your turn to choose one creature other than yourself within 60 feet of you who can hear you. That creature gains one Inspiration die, a d6.

Once within the next 10 minutes, the creature can roll the die and add the number rolled to one ability check, attack roll, or saving throw it makes. The creature can wait until after it rolls the d20 before deciding to use the Inspiration die, but must decide before the DM says whether the roll succeeds or fails. Once the Inspiration die is rolled, it is lost. A creature can have only one Inspiration die at a time.

You can use this feature a number of times equal to your Officer level plus Charisma modifier (a minimum of once). You regain any expended uses when you finish a long rest.

Feat and Ability Score Improvement
When you reach 3rd level, and again at 6th and 9th level, you can increase one ability score of your choice by 2, or you can increase two ability scores of your choice by 1 up to your default maximum of 20. Additionally, you can choose one feat to gain or increase an ability score by 1, and increase its maximum by one instead.

Delegation
Starting at 5th level, once per round as a bonus action, direct one of your companions to act. When you do so, choose a friendly creature who can see or hear you. That creature can immediately use its reaction to make a single attack, or take a bonus action.

Commanding Presence
From 8th level onward, whenever you take a short rest, you regain a use of your Inspiration ability. Henceforth, the Inspiration dice you grant are increased to d8s.

Officer Specialization
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.

Ace
Aces are known for dazzling feats of piloting, and inspiring others with their incredible feats of skill.

Cocky
Starting at 4th level, you can use your Inspiration ability on yourself as a bonus action or as a reaction before you make an attack roll, saving throw or ability check. You gain a number of additional uses of this ability equal to your Charisma modifier (meaning your total number of uses per long rest is equal to your level plus twice your charisma modifier.)

A few maneuvers
From 7th level when you or a vehicle you are piloting are hit by an attack, you can, as a reaction, increase your AC (or that of the vehicle you are piloting) by 3 against this attack, possibly causing it to miss.

I’m the best
Beginning at 10th level, once per round you can (as a bonus action) expend three uses of your Inspiration ability to take an additional action in addition to your normal action and bonus action.

Captain
Captains are masters of inspiring their crews, and pushing their starships to their very utmost limits.

Oh captain, My captain!
Starting at 4th level, when you use your Inspiration ability, you can grant an inspiration die to a number of targets that can see and hear you equal to your charisma modifier. This still counts as a single use of the ability.

Heartening Words
From 7th level, whenever a character receives an inspiration die from you they receive a number of temporary HP equal to your charisma modifier.

Into Hell
Starting at 10th level, your delegation ability can be used up to twice per round, and can be used as a reaction at any time in the round. (Meaning you can use it as a bonus action, and as a reaction, or as two separate bonus actions or reactions if you somehow managed to get additional bonus actions or reactions.)
Sarge
Serving as the vital backbone of any military organization, noncommissioned officers perform the role of ‘boots on the ground’ leadership that is most visible to enlisted troops. Common ranks include Sergeants, Petty Officers and Warrant officers of a variety of grades and specializations.

Don’t call me ‘Sir’
Starting at 4th level, you gain proficiency in Military Weapons and Combat armor if you did not already have it. If you are already proficient with Military Weapons and Combat armor, you become proficient with Heavy Weapons and Powered Armor instead. If you are already proficient with Heavy Weapons and Powered Armor, increase your maximum hit points by 8, and an additional 2 per Officer level you attain.

At the start of each of its turns, any creature that has an inspiration die provided by you gains an amount of temporary hp equal to your charisma bonus.

Work for a living
From 7th level onwards, whenever an attack you make reduces a creature to 0 hp, choose an ally within range that has had an inspiration die provided by you during this encounter, it gains another die without costing a use of your inspiration ability. This ability allows a creature to possess up to two inspiration dice provided by you.

Creatures that possess an inspiration die provided by you add your proficiency bonus to damage rolls from their attacks.

Do you want to live forever!?
Beginning at 10th level, you can expend two uses of your inspiration ability to grant yourself and each ally that has an inspiration die provided by you the ability to make an additional attack whenever it makes the attack action. This effect lasts for a number of rounds equal to your charisma bonus.
Operative

You hear the door to the restroom open, and hear the shuffling of clothing as the man begins to relieve himself. He never knows what was coming as a flurry of stunner darts drop him into the puddle of his own waste. You grunt noncommittally as you rejoin his squad, his uniform is tight, but thankfully no one else seems to notice. That must be their leader, the one with the ridiculous hat. You can hear radio traffic in your earpiece, that from your ship, as well as theirs, their handhelds didn’t even use biometrics. Amateurs. Hat man says crazy things, and the rest cheer, apparently they are about to charge the docking bay. That works. You thumb your weapon to automatic, and slowly follow up the back of the line. Their assault isn’t going to go as planned.

Operatives serve the special needs of their starships, performing a variety of unsavory acts as required. Thieves, assassins, spies, diplomats, private investigators, operatives can be perceived very differently based on their career choices, but one constant is present, operatives specialize in cunning. Do not doubt one in negotiations, and do not turn your back on one if they are your enemy.

Operatives thrive in the exploration and social pillars of gameplay, but are capable of respectable feats in the combat pillar as well, thanks to sneak attack. A properly positioned operative can end key threats before they begin, or negate the need for a fight.

Operative is the best class because it is untouchable. Whether it is in combat, trade or any other perceivable venue, your ability to lie, cheat, steal and murder are second to none. You can do what you like, and probably get away with it too.

Class Features

As an Operative, you gain the following class features.

Hit Points

Hit Dice: 1d8 per Operative level
Hit Points at 1st Level: 8 + your Constitution modifier
Hit Points at Higher Levels: 1d8 (or 5) + your Constitution modifier per Operative level after 1st

Proficiencies

Armor: Protective Gear
Weapons: Civilian Weapons, Military Weapons
Tools: Lockpicks and one Systems Proficiency.
Skills: Choose four from Acrobatics, Athletics, Culture, Computer Use, Deception, Insight, Intimidation, Investigation, Law, Perception, Performance, Persuasion, Sleight of Hand, and Stealth.
Equipment
You start with the following equipment, in addition to the equipment granted by your background:
- Combat Knife and Blaster Pistol
- Skinsuit
- Lockpicks
- Choice of Infiltration or Surveillance Kit

Starting at 5th level, when an attacker that you can see hits you with an attack, you can use your reaction to halve the attack’s damage against you. This is not damage reduction, and cannot be negated as such.

Devil’s own luck
From 8th level, when you roll a 1 or 2 on an attack roll, damage roll (this includes sneak attack dice as well as weapon dice), ability check, or saving throw, you can reroll the die but must use the new roll.

Operative Specialization
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.

### Level | Sneak Attack | Proficiency Bonus | Features
--- | --- | --- | ---
1st | 1d6 | +2 | Sneak Attack
2nd | 1d6 | +2 | Cunning Action
3rd | 2d6 | +2 | Feat/Ability Score
4th | 2d6 | +2 | Specialization Ability
5th | 3d6 | +3 | Uncanny Dodge
6th | 3d6 | +3 | Feat/Ability Score
7th | 4d6 | +3 | Specialization Ability
8th | 4d6 | +3 | Devil’s own luck
9th | 5d6 | +4 | Feat/Ability Score
10th | 5d6 | +4 | Specialization Ability

Sneak Attack
Beginning at 1st level, you know how to strike subtly and exploit a foe’s distraction. Once per turn, you can deal an extra 1d6 damage to one creature you hit with an attack if you have advantage on the attack roll.

You don’t need advantage on the attack roll if the target took damage this turn, or if another enemy of the target is within 5 feet of it, that enemy isn’t incapacitated, and you don’t have disadvantage on the attack roll.

The amount of the extra damage increases as you gain levels in this class, as shown in the Sneak Attack column of the Operative table.

Cunning Action
Starting at 2nd level, your quick thinking and agility allow you to move and act quickly. You can take the Dash, Disengage, or Hide actions as bonus actions.

Feat and Ability Score Improvement
When you reach 3rd level, and again at 6th and 9th level, you can increase one ability score of your choice by 2, or you can increase two ability scores of your choice by 1 up to your default maximum of 20. Additionally, you can choose one feat to gain or increase an ability score by 1, and increase its maximum by one instead.

Uncanny Dodge
**Special Agent**

Spies are of inestimable use to any organization, and the only greater fools than those with none in their employ are those that fully trust the ones they have.

**Skilled**

Starting at 4th level, you can gain proficiency in any two skills or Toolkits. Choose two skills or toolkits with which you are proficient: whenever you use one of these skills or toolkits to make an ability check, double your proficiency bonus with it.

**Infiltration Expert**

Starting at 7th level, you can unfailingly create false identities for yourself. You must spend seven days to establish the history, profession, and affiliations for an identity. Thereafter, if you adopt the new identity as a disguise, other creatures believe you to be that person until given an obvious reason not to.

**Silent as Death**

From 10th level, you can move at your full speed while using stealth, and if you move half your move speed or less, you gain advantage on that stealth check.

You are at your deadliest when you get the drop on your enemies. You have advantage on attack rolls against any creature that hasn’t taken a turn in the combat yet. In addition, any hit you score against a creature that is surprised is a critical hit.

**Scoundrel**

Scoundrels are thieves, conmen, smugglers and worse, serving their starship (and ultimately their best interests) by doing whatever has to be done.

**Always shoot first**

Starting at 4th level, you gain advantage on initiative checks and gain proficiency with weapons systems.

**Never play fair**

From 7th level, whenever you make opposed ability checks, your opponent gains disadvantage on the roll. Before you make an attack, you can use your reaction to give yourself advantage on the attack roll.

**Trust No-one**

When you reach 10th level, you have become adept at laying ambushes and quickly escaping danger. You can take two turns during the first round of any combat. You take your first turn at your normal initiative and your second turn at your initiative minus 10. You can’t use this feature when you are surprised.
Bounty Hunter
Bounty hunters are known to relentlessly track their targets across worlds and systems at the behest of governments, militaries and even private individuals.

Ruthless
Starting at 4th level, your cunning action is expanded to include shoving, disarming or grappling your opponent. These abilities use an opposed athletics check.

Always get my Man
From 7th level, as a bonus action, you can designate a creature, and against this target gain advantage on all investigation, perception and survival checks to track this character. All sneak attacks you make against this target deal an additional sneak attack die of damage.

As a bonus action after the target of this ability dies or is disabled, you can select another target.

Takedown
When you reach 10th level, your sneak attack dice become d8s, and whenever you deal sneak attack damage to a target they become paralyzed. At the end of their turn a paralyzed target can make a dc13 constitution save to remove this condition.
Savage
You have finished loading the last of the large metal barrels that are apparently so important, it is laughable that you can easily manage two while the humans insist on using one of their contraptions to carry just one. You hear the sounds of battle close in and can wait no longer, you feel your hearts beginning to pump harder in anticipation. As you exit the skyship, you see the small human is fighting with its bare hands, lacking even a knife, much less a respectable blade. You briefly consider striking it down, but it is a capable war leader and you doubt the other humans would follow your strength. In time they will see. You ready your q’nath blade, and extend your neck frills to roar your battle cry. Several of the enemies pause fighting to gaze upon your spectacle. The nearest releases urine, its pungent scent an obvious challenge of dominance. You grip your weapon with both hands and prepare to punish its arrogance.

Savages might join the crew of a starship, trading their prowess in battle for a chance to escape their primitive world and see the stars. Without an education and lacking technical understanding, savages are often relegated to less glamorous roles on a starship, but are of singular importance on their native worlds, or when dealing with situations that their more civilized companions are unaccustomed to.

Savages excel in planetary exploration and combat, having a difficult time with space combat and high level social challenges. Alternatively, a savage can be played as civilized, but just less advanced, and can fill a variety of social roles as appropriate.

Savage is the best class because you are not made weak and dependent on machines and tricks like the others. They have fallen for the lies of civilization, and you know what it means to be a true warrior and feel the land trod beneath your sandaled feet.

Class Features
As a Savage, you gain the following class features.

Hit Points
Hit Dice: 1d10 per Savage level
Hit Points at 1st Level: 10 + your Constitution modifier
Hit Points at Higher Levels: 1d10 (or 6) + your Constitution modifier per Savage level after 1st

Proficiencies
Armor: Archaic Armor
Weapons: Archaic Weapons
Saving Throws: All
Skills: Choose three from Acrobatics, Athletics, Insight, Intimidation, Perception, Stealth and Survival.

Equipment
You start with the following equipment, in addition to the equipment granted by your background:

- Any two Archaic Weapons or an Archaic weapon and Archaic Shield
- Archaic Armor
- Fetish, trophy or Religious item
Your party is not impeded or slowed by difficult terrain during overland travel.
• You can perform other activities while traveling at no penalty, such as tracking, foraging or using stealth.
• While tracking creatures you gain additional information.

**Combat Focus**
From 1st level, you adopt a particular style of fighting as your specialty. Choose one of the following options. You can’t take a Combat Focus option more than once, even if you later get to choose again.

- **Long Arm Focus**
  You gain a +2 bonus to attack rolls made with two handed ranged weapons.

- **Melee Focus**
  When you roll a 1 or 2 on a damage die for an attack you make with a melee weapon that you are wielding, you can reroll the die and must use the new roll, even if the new roll is a 1 or a 2.

- **Protection Focus**
  While wielding a shield, if a creature you can see attacks a target other than you within five feet of you, you can use your reaction to impose disadvantage on the attack.

- **Two-Weapon Focus**
  When you engage in two-weapon fighting, you can add your ability modifier to the damage of the second attack.

**Savage Defense**
Beginning at 2nd level, while wearing archaic armor or no armor, whenever you would take damage, reduce that damage by your constitution bonus.

**Feat and Ability Score Improvement**
When you reach 3rd level, and again at 6th and 9th level, you can increase one ability score of your choice by 2, or you can increase two ability scores of your choice by 1 up to your default maximum of 20. Additionally, you can choose one feat to gain or increase an ability score by 1, and increase its maximum by one instead.

**Extra Attack**
Beginning at 5th level, you can attack twice, instead of once, whenever you take the Attack action on your turn.

**Savage Ways**
Starting at 8th level, your time amongst these so called “civilized” folk have taught you many lessons, and you benefit from one of the following choices:

- **Crafty**: Your archaic weapons and armor can possess up to three modifications.
- **Killamajig**: You are considered proficient with any weapons and armor.
- **Champion**: Whenever you reduce an enemy to 0 hp, your allies gain temporary hp equal to your proficiency bonus.

**Savage Specialization**
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.
Hunter

Hunters track their prey relentlessly, taking trophies from their most challenging foes, and the biggest game.

Bloodthirsty

Starting at 4th level when you attack a creature that is at less than its maximum hp, your attacks deal an additional 1d8 damage.

Relentless

From 7th level onward, opportunity attacks against you gain disadvantage, and whenever a creature hits you with an attack, you gain +4 ac against the rest of its attacks for the rest of the turn.

Slayer

Starting at 10th level, whenever you deal damage with a weapon attack, you can make an additional attack against a target within five feet of the original target or adjacent to yourself as a reaction.

Additionally, when you attack a creature that is at less than its maximum hp, your attacks deal an additional 2d8 damage instead of 1d8.

Oathsworn

The Oathsworn follow a code of honor or philosophy that leads them to protect their comrades. This could be motivated by an oath of fealty, a lifedebt, or even just a general sense of common purpose, but it is dangerous to attempt to harm someone under the protection of these formidable warriors.

Dedicated Defender

Starting at 4th level, an attack that you could be the target of is made against an ally, you can (as a reaction) force that attack to be made against you instead. You gain resistance to damage dealt by this attack.

Vengeance

From 7th level onwards, whenever you attack a creature that has dealt damage to an ally since your last turn, you gain advantage on that attack and it deals an additional two weapon dice of damage.

Lightning Defense

Starting at 10th level you can make up to two reactions per turn. Whenever an attack is made against an ally, you can move up to half of your movement speed towards the originator of that attack and make a single melee attack against them as a reaction. If this attack hits, prevent the attack that creature was about to make from dealing any damage.
Warrior
Warriors are skilled combatants that seek to prove their worth in battle, defending their allies and going head to head with the toughest foes.

Warcry
Starting at 4th level, whenever you make an attack against a creature you can mark it. Until your next turn, it has disadvantage on attack rolls against all targets other than yourself.

Additionally, whenever you would have advantage on an attack, you can forego that advantage to make an additional attack against the same target. Multiple sources of advantage can be foregone in exchange for additional attacks. With extra attack, you forego advantage on both attacks to receive one extra attack, not two, because you are giving up the condition of advantage in general, and not for a particular attack.

A good day to die
From 7th level whenever you reduce a hostile creature to 0 hp, you lose any temporary hp you have from this ability, and gain a number of temporary hp equal to your constitution modifier plus Savage level.

Glorious Battle
Starting at 10th level you can use your action to either make a ranged attack against all targets within five feet of a space you designate, or a melee attack against any number of targets within five feet of you.

Archaic Weapon Examples

Spear: One Handed Melee Weapon, 1d8 Piercing damage. Special: Thrown 20/60. As a bonus action the wielder of this weapon can attack targets within 5 feet until the beginning of their next round.

Two Handed Sword: Two handed Melee Weapon, 1d12 Slashing Damage. Special: Whenever this weapon deals damage, roll its weapon damage dice twice, and keep the higher result of the two.

Warhammer: One Handed Melee Weapon, 1d8 Bludgeoning Damage. Special: When a weapon damage die of this weapon is rolled at its maximum value, you may roll an additional die and add it to the total damage dealt by the attack.

Musket: Two Handed Ranged Weapon, 1d10 Bludgeoning Damage, Range 60/180. Special: Loading,
Civilian

You hear another explosion from outside and instinctively cover your head. This isn’t what you signed up for. Ship’s purser, legal counsel, accountant. It was supposed to be easy money, work your passage to Nova Britannica and pocket a nice pay day to start a life with. Somewhere quiet, with trees, and a brook, and oh god! Over the radio, did they just say there are two bombs left? Why are there so many bombs? One bomb is too many bombs. The giant alien lizard thing hisses at you again, no clue what it is supposed to mean, do these even talk? You set down the dolly, this is the last of the barrels of... whatever they are, but the mechanic said they would explode if they got shot, so you’re glad to be done with them. You passed the bar for this? Screams from down the loading ramp, hissy crawls down it on all fours like a demented gecko, is the fight making it onto the ship? You ready your stunner and look for a place to hide. Not behind the barrels, though, maybe in that storage locker, if they find you, maybe you can stun them and run off the ship. To where the bombs are. Crap...

Civilians exist to fill roles that other classes just don’t, be they diplomats, merchants, experts, even school teachers. Civilians contribute little to the combat pillar of game play, but can excel in either social or exploration, depending on the scenario, and their relevant skill sets.

Civilian is the best class because nobody expects you to get shot at, or fly a hundred thousand ton star ship, or ride a giant flying dinosaur thing and try to drop grenades on an alien castle, or any of that ridiculous stuff that will probably get you killed.

Class Features
As a Civilian, you gain the following class features.

Hit Points
Hit Dice: 1d6 per Civilian level
Hit Points at 1st Level: 6 + your Constitution modifier
Hit Points at Higher Levels: 1d6 (or 4) + your Constitution modifier per Civilian level after 1st

Proficiencies
Armor: Protective Gear
Weapons: Stun Pistols, Stun Rifles, Stun Batons
Tools: Any One
Skills: Choose any three

Civilians fill a wide variety of roles in society as the class of people that literally make it civilized. Everything from janitors to professors make up the ranks of civilians, and while they might make poor adventurers, they make up for it with pluck and determination.
Equipment
You start with the following equipment, in addition to the equipment granted by your background:
- Skinsuit
- One Tool Kit
- Spacer’s Kit or Explorer’s Kit

Maximum Effort
Starting at 5th level, when you would fail a check or save, you can reroll that check or save, but must keep the new results. This ability can be used once per task.

A Level in Badass
At 8th level, your experience has coalesced to the point you have learned the tricks of another class. Choose any class, gain its first level proficiencies and abilities.

Civilian Specialization
At fourth level, choose a specialist field. This field of specialization grants features at 4th, 7th, and 10th level.

Specialist Examples
Acrobatics: Trapeze Artist, Yoga
Athletics: Greco Roman Wrestling, Football
Biology: Xenobiology, Microbiology, Genetics
Computer Use: AI programming, Network Security
Culture: English literature, Alien Culture, Art Critic
Deception: Lying to the cops, lying to Men/Women
Engineering: Civil engineer, Electrical engineering
History: Greylian History, 20th century Earth
Insight: Detecting Lies, Empathy
Investigation: Forensic investigator, Gossip
Intimidation: Humans, Synthetics, Aliens
Law: Criminal Law, Trade Law, Estate Law
Medicine: Internal Medicine, Trauma Medicine
Perception: Sharp Sense (Sight, Hearing, Smell)
Performance: Stand-up Comedy, Acting, Dancing
Persuasion: Seduction, Haggling, Diplomacy
Sleight of Hand: Magic Tricks, Pickpocketing
Stealth: Not being Heard, Not being seen
Survival: Urban survival, wilderness survival
Survivor
With tenacity and determination Survivors are bound and determined that they won’t die out here, and not like this!

Won’t go down easy!
Starting at 4th level, when you would take damage, you can spend a hit die to reduce that damage by 1d6 plus your wisdom modifier. Additionally, you can add your wisdom bonus to any saving throws you make.

Kicking and Screaming!
From 7th level, you can add at least half of your proficiency bonus (rounded up) to any attack roll or ability check, whether or not you are proficient with that weapon, skill or tool or any armor you are wearing.

Whenever you deal damage to a creature that has dealt you damage, that creature must make a wisdom saving throw (DC equal to 8 + your proficiency bonus plus your wisdom bonus) or gain vulnerability to the damage dealt by your attack.

Defiant until the end!
Starting at 10th level, the Dodge action is considered a bonus action for you. Additionally, if you would be reduced to 0 hp, you can spend a hit die and regain hp equal to 1d6 plus your wisdom bonus. At the beginning of an encounter, if you have less hit dice remaining than your wisdom bonus, regain one hit die.

Whenever an attack you make would reduce a creature to 0 hp, and you possess less than half of your maximum hit dice, regain one hit die.

Fortunate One
You were just born lucky. This isn’t superstition, just the simplest way of stating things, as events seem to have a way of playing out in your best interest a far larger amount of the time than statistics and probability would suggest. Perhaps it is intuition, fast reflexes, or some other undefined attribute, but regardless, you’ve got it.

Lucky Break
Starting at 4th level, you are preternaturally lucky, and can force any check, attack or save to be rerolled. This ability can be used three times before taking a long rest.

Nine Lives
From 7th level, it seems as though fate conspires to keep you alive. You automatically stabilize if you are reduced to 0 hp, but each round can make a dc10 constitution check. If you make three successful such checks (or make one with a result of 20 or higher) you regain 1 hp.

What are the odds?
Starting at 10th level, whenever you would roll a die, roll two instead, and keep the result you prefer. (When you make a check with advantage or disadvantage, you would roll 4 d20s, and keep the two you prefer, then choose the higher or lower number as appropriate.)
Team Player
You are the leader of a small team or group of individuals. Perhaps it is your family, perhaps it is your soccer team, or colleagues or co-workers.

One for all!
Starting at 4th level and again at 7th and 10th level, you are accompanied by an additional character. If this character is killed, you cannot acquire another until you attain another character level. When selecting this character, you can choose one of the following options that you have not already selected:

Mascot: this character is a child, pet, robot, or other quirky or adorable creature which has no practical skills. As long as the creature is within sight of you and at more than 0 hp, you, your partner, and your companions, can add +2 to all of your ability checks, attack rolls, and saving throws.

Companion: Treat this creature as a 1st level civilian which you control. This choice can be selected multiple times.

Partner: Treat this creature as a first level character of any class. When you gain a level, this character can as well, up to a maximum level equal to half of your own.

All for one!
From 7th level, you and your team can expend hit dice to heal one another when you take a short rest.

Additionally, you can choose an additional team member as specified in the ‘One for All!’ feature listed above.

Indivisible
At 10th level, you can select an additional character to join your team, as per the ‘One for All!’ feature listed above. This brings your team up to three members.

If one of your team members would die, you can replace them at an appropriate time of your DMs choosing instead of when you gain a level.
Chapter 5: 
Backgrounds

Backgrounds define a character’s early career choices, upbringing, and experiences that have led them to where they are now. A character’s background should be a major decision in terms of stats and abilities, but more importantly in terms of motivation and storytelling.
Aristocrat

Coming from a position of affluence, Aristocrats might not be actual nobility, but it is difficult to tell the difference. Children of powerful executives or wealthy families, Aristocrats had every conceivable advantage growing up, benefitting from minor gene tweaks, sterling education, and the ability to pick any course they want for their lives.

**Skill Proficiencies:** History, Culture

**Tool Proficiencies:** Any one musical instrument or Gaming Set

**Equipment:** A set of formal clothing, 500 credit chips

**Feature:** The 1%
Your family is astonishingly wealthy. While that money might not yet be yours, you can make limited use of your family’s affluence. Once per session a character with this feature can waive the cost of one good, service or bribe that the DM finds within reason, overcoming a challenge or limitation solely by deep pockets. This can include but is not limited to: bumping a ship to the front of the line for docking, subsidizing overpriced fuel or docking costs, acquiring a key replacement part, or securing the use of a single item. The invoices for all these purchases and costs will eventually make it back home to daddy, so at least try to be reasonable, or risk being cut off.

Celebrity

Perhaps you were on reality TV, maybe you hit a billion views on Ütube, and maybe you’re a concert violinist. Regardless, there are people who recognize you, and for you, any attention feels like good attention.

**Skill Proficiencies:** Culture, Perform

**Tool Proficiencies:** Disguise Kit, one type of musical instrument or gaming set

**Equipment:** One musical instrument of your choice, one flashy costume or outfit, 150 credit chips

**Feature:** Maybe you’ve heard of me
When interacting with someone you can make a charisma check DC 15 (10 if the target is from your home system) to be recognized. The result of this recognition is up to the DM, but might involve advantage on further skill checks, preferential treatment, free stuff and discounts.
Colonist

Mankind has settled its first new worlds, and you are among the descendants of those bold pioneers. Whether you came back to space to push the frontier further, or because of a desire for more civilization, you grew up on an alien world, and had to learn early how to survive.

Skill Proficiencies: Survival

Tool Proficiencies: Survey Equipment

Equipment: Laser Rifle, Bush Clothing, 50 Credits

Feature: Xenofrontiersman

You have an excellent grasp of planetary survey maps and charts, and always understand exactly where you are in relation to landmarks and other points of reference. Additionally, in compatible environments you can find edible food and potable water for up to five other people each day.

Company Man

You are the representative of one of the Mega-Corporations of earth, serving their interests among the stars. Greed is good, and whatever opportunities you find for the company to exploit will net you a healthy finder’s fee.

Skill Proficiencies: Deception, Law

Languages: Tradespeak

Equipment: Business Suit, Briefcase, 200 Credit chips

Feature: From the Home Office

As long as you remain in good standing with management, local fronts for your corporation will assist you with reasonable tasks and requests, as well as providing lodgings for you and a sufficiently small staff.
Criminal
You have a shady background, and are the member of a criminal organization, seeking opportunities to advance your organization among the stars.

Skill Proficiencies: Intimidation

Tool Proficiencies: Your choice of Forgery Kit, Lockpicks or Gaming Set

Equipment: Blaster Pistol or Combat Knife, basic outfit, 100 credit chips

Feature: I know a Guy
Your connections in the criminal underground let you find illegal or black market goods for purchase, or find outlets to sell similar.

Journalist
As a representative of a news organization you are among the stars looking for a story, perhaps to make a name for yourself, or to get back in the good graces of your organization.

Skill Proficiencies: Investigation

Tool Proficiencies: Disguise Kit or Forgery Kit

Equipment: Recording Rig, nice outfit, your choice of a disguise or forgery kit, and 100 credit chips

Feature: Sources
When investigation hits a dead end, or when you just need some clarifying information, a journalist can call on a network of confidential sources for this information. Sometimes bribes or favors will be required, and some information is just too dangerous for a source to divulge, but there is always at least a clue to be found.
Merchant

You were raised in the markets and bazaars of many stations and worlds, carrying out the vital commerce that fuels humanity’s expansion into the stars.

**Skill Proficiencies:** Deception and Persuasion

**Equipment:** Holdout laser pistol, fine outfit, 300 credit chips worth of trade goods.

**Feature:** Let’s Make a Deal
With profits on the line, you can always make yourself understood, and can attempt commerce even with beings you share no common language with. In addition, add your level and charisma bonus to all business ventures you engage in, and add one additional “Gain Die” to the prices of goods you sell, if using the optional “Trade Good Volatility” rules.
Military

You served one or more tours of duty in a military force, and attained rank before mustering out to find a life of adventure in space. Perhaps it was a planetary defense force, interstellar or system navy, or even just a local militia.

Specialty: During your time in the service, you received special training. Choose one of the following options to determine your specialization.

- **Basic Infantry Training**: You trained in basic to learn to use a wide variety of weapons and armor for personal combat. You gain proficiency in Military Weapons and Combat Armor.
- **Flight School**: You trained in flight school to fly anything, anywhere. You gain proficiency with Space Vehicles and Atmospheric Vehicles.
- **Corps of Engineers**: You served the corps of engineers, blasting and building for the service. You gain proficiency with Demolitions Kits and Robotic Control Interfaces.
- **Field Medicine**: You served as a field medic in the service. You gain proficiency with Medkits and Military Weapons.
- **Military Academy**: You attended a prestigious military academy. You gain proficiency in History and your choice of Intimidate or Persuasion.
- **Special Operations**: You served with special operations, which is all that you are allowed to say. You gain proficiency with Stealth and Survival.

Equipment: Your choice of Gauss Pistol or Blaster Pistol, dress uniform, medal of distinction, 50 credit chips.

Feature: Rank and File
You mustered out with your rank intact, at least an E4, and good standing with the military. You can use this to gain access to limited resources from military bases and vessels, such as emergency refueling or repairs, medical treatment, or access to communications lines.
Missionary
You have come to the stars to spread your religious or philosophical views, and have the backing of a church or group of similar minded individuals.

Skill Proficiencies: History and Persuasion

Languages: Choose any one language.

Equipment: Respectable outfit, copy of your core religious or philosophical text, 20 credit chips

Feature: Defender of the Faith
Wherever there are other followers of your faith or philosophy, expect to have allies to call on in times of need for basic lodgings, food, limited resources and general support. If there are no such followers, make some.

Offworlder
You are not native to human society, and are confused by its ways. Perhaps you were the orphaned survivor of a failed colony, abducted by aliens and later returned, or are even an alien from a distant world.

Skill Proficiencies: Sleight of Hand, Deception

Equipment: Combat Knife, token of your homeworld, 10 credit chips

Feature: Not from Around Here
You are obviously from a foreign culture, and humans have no clear idea exactly how to deal with you. By pretending not to understand languages, you can often bluff your way out of a sticky situation, and others will give you little thought as they speak in front of you, underestimating your understanding of concepts.
Police

You were a sworn peace officer working for a civilian government. You retired from policework to venture to the stars, but your record as a law enforcer follows you, making criminals nervous and security personnel rest easy.

Skill Proficiencies: Investigation, Law

Equipment: Choice of Stun Pistol or Stun Rifle, Riot Gear, Badge, normal outfit

Feature: Brothers in Blue
Your time as a law enforcer lets you more easily get along with security and local police. You can smooth over rough relations with authorities (within reason) and can be called upon by departments to assist with crime during emergencies.

Politician

You held an elected office or worked to help someone else hold one. You have experience dealing with bureaucracy and red tape from the inside, and have left for the stars to find a new avenue to power.

Skill Proficiencies: Choose any two of Deception, Persuasion, Insight or Law

Equipment: Nice Suit, 100 credit chips worth of vice product (cigars, alcohol, etc), holdout laser pistol.

Feature: Friends and Neighbors
You have a way with crowds, and given at least ten minutes can shift the mood of a group of people one step closer to friendly for the next few hours. Alternatively, you can convince a group of people you might just have the best solution to the current problem, real or imagined.
**Primitive**

You hail from a primitive world, though you might prefer the term ‘Less Advanced’. Perhaps it was roughly equivalent to the medieval period, or even the human Stone Age, but your grasp of science is just not up to par with interstellar species. That being said, you are less soft and weak than these beings spoiled by their technology.

**Skill Proficiencies:** You are proficient with Athletics and Survival

**Equipment:** Native Dress of your homeworld, trinket.

**Feature:** Noble Savage

You take pride in the world of your origin and in its ways, those you meet are just not prepared for them. As long as you are wielding archaic weapons you gain advantage on your attack rolls against targets who are not also using archaic weapons.

---

**Spacer**

You were born and raised onboard the early generation of relatively slow interstellar vessels, travelling between the stars of the fringe, trained from a young age to pitch in aboard a starship.

**Skill Proficiencies:** Acrobatics

**Languages:** Choose any two Languages.

**Tool Proficiencies:** Choose any two of Space Vehicles, Repair Kit or any System.

**Equipment:** Laser Pistol, Hardsuit (Armored Skinsuit with disadvantage on stealth checks), Repair Kit, Alien Trinket, 100 credit chips

**Feature:** Different Circles

Spacer social conventions are different than those of normal human society, and you have cultivated a reputation amongst spacers. Depending on if you are famous, or infamous, other spacers have certainly heard of you and will respond accordingly. Wherever spacers gather, you can expect to find a berth on a ship, aid, information, and acceptance barred to other folk.
Stationer
You were born and raised on a space station or habitat, having rarely or never been planetside. The rigid discipline required to live in an environment completely inhospitable for life has helped you become a very pragmatic and rational individual.

**Skill Proficiencies:** Choose either Engineering or Computer Use

**Languages:** Choose any one language.

**Tool Proficiencies:** Repair Kit

**Equipment:** Repair Kit, 200 credit chips

**Feature:** Station Secrets
You know the secret ways and back routes common to human built stations and habitats, and when outside of combat can travel without detection between any two locations in such an environment twice as quickly as you normally would.

Tanker
Your first memory was stumbling up from a crash of amniotic fluid, fully grown and formed, knowing how to walk, to stand, and speak. Your last few years of technical study passed quickly, a formality really, and now you stand ready to fulfill your purpose in the stars. While biologically human, you are different from the rest of humanity, a breed apart almost.

You were produced to fill some role on a starship or station, and are expertly adept at your specialization.

**Skill Proficiencies:** Choose any one skill or tool to gain proficiency in.

**Equipment:** 25 credit chips, one tool you are proficient with (if you gained proficiency with it using this background).

**Feature:** Bred to Order
You were created to fulfill a particular purpose. Whether that was surgical genius or waste disposal, you are nonetheless eminently qualified for this task. Double your proficiency bonus with the skill or tool in which you gained proficiency when choosing this background.
Chapter 6: New Skills, Feats and Proficiencies.

This chapter contains new skills, new feats, and new proficiencies.

It should be noted that Fifth Age makes extensive use of the SRD for all of its base resolution mechanics, and most skills. The skills in this chapter are considered to be in addition to the skills provided in the SRD.

A different genre altogether means that certain skills from the SRD are no longer useful or appropriate and can be safely left out altogether. The following skills are not commonly used in Fifth Age:

**Animal Handling**: Animal husbandry can be achieved with biology, and directing animals can be done with persuasion or intimidate as appropriate.

**Nature**: This skill is best covered by biology or survival depending on application.

**Religion**: The normal applications of this skill are now covered by Culture or History as appropriate.

Note that characters from vastly different societies might still practice some or all of these skills, but they are no longer pervasive enough to be considered core skills for the system.

**Arcana**: Magic is just superstition, and as such is no longer worthy of a skill into itself. You can simulate such knowledge with the culture or history skills.
New Skills
Fifth age adds several new skills, detailed below.

**Biology:** Intelligence (Biology) is used to cover both a general understanding of the life sciences, knowledge of living catalogued organisms, and the reasoning and capacity to study new forms of life. Characters wishing to understand an alien life form might make such a check to learn about the organism’s breathing requirements, or to find out what chemical compounds it would find poisonous.

**Computer Use:** Intelligence (Computer Use) is used when one interfaces with a computer in more than a casual fashion, and covers general knowledge of networks, programming and computer security systems. A character might make a computer use check to hack into a captured data pad, write a program to alert them to the comings and goings of a particular person on a station, or to keep another character from infiltrating the ship’s network by hypernet. Note that most uses of computer use require a means of interfacing with the computers in question, requiring access to a console or the user to possess a computer interface of some sort (at least 50 credits).
**Engineering**: Intelligence (Engineering) covers a wide variety of physical sciences and knowledge common to starship personnel operating in the field. Use of this skill would be appropriate for overloading a reactor, boosting a thruster’s output, or designing a replacement part for a damaged system.

**Culture**: Intelligence (Culture) is a general understanding of sociology, current events and pop culture that let you understand the cultural events going on in society around you. A character might use this skill to recognize a popular musician, fashion trend, artistic style, customs or a pop culture reference.
**Navigation:** Wisdom (Navigation) is used to plot Hyper-courses as well as plotting in normal space, and requires a solid mix of complex maths and common sense. A character would make such a check when preparing to make a jump out of a system too close to the gravity well, in an attempt to shave some relativistic time off of a trip or when attempting to conserve fuel when travelling body to body in a system.

**Law:** Intelligence (Law) is used to represent a character's knowledge of legal procedure and precedent, and such a skill might be used to recall what goods might be illegal in a region, write a business contract, understand a contract, and to argue in a court of law.
New Tool Proficiencies

Fifth Age adds several new tool and vehicle proficiencies, detailed below. Fifth age makes use of the tool proficiencies outlined in the SRD with very little exception except the reinterpretation of these into the modern (and postmodern) era.

The tools commonly still in use in Fifth Age are the following:

**Artisan’s Tools:** Sculptors, woodworkers and brewers are still around, and are joined by welders, plumbers and the like. If you are a skilled artisan, craftsman or tradesman, these tools are for you.

**Disguise Kit:** Playing pretend has gotten a big upgrade in the future, but the basics are the same.

**Forgery Kit:** Faking documents now takes more software than hardware, but if you need a fake passport, ident-chip or bill of lading, this is what you use.

**Gaming Set:** Perhaps even more relevant after their inclusion in the Olympic games, gaming is finally getting the recognition it deserves, be it Chess, Football, or Extreme Soldiers ’37 for Gamestation.

**Lockpicks:** Locks are only good for keeping honest people honest. These tools can be mechanical or software based depending on need.

**Musical Instrument:** As long as chicks dig musicians, there will be those who learn to play. Also, some people claim to express the artistic yearnings of their soul through song.

New Tools include the following:

**Astrosurveying Equipment:** This tool is used for the gathering and analysis of data on a system wide scale, creating detailed charts useful for navigating hazards, planetary orbits, and the like. A character would use this tool to create a detailed navigational chart for a system or when searching for which bodies contain mineral deposits.

**Demolitions Kit:** This toolkit is used for the creation, placing, or defusing of explosives and demolition charges. A character would use this tool when setting a ship to self-destruct, attempting to destroy a bridge, or to disarm a bomb.

**Repair Kit:** This toolkit is used to repair technological devices, systems or vehicles. A character might use this tool to repair battle damage to their starship, patch a propellant tank, reattach a synthetic’s arm that was torn off, or return a laser pistol to working order after being dropped in a swamp.

**Planetary Survey Equipment:** This tool is used for the gathering and analysis of data, on a planetary scale. A character would use this tool to create detailed planetary charts for navigation, exploration or colonization, or when looking for something particular on a world, like mineral deposits or other resources on a particular body.

**Vehicle (Atmospheric):** These are vehicles designed to be used within a planetary atmosphere, and can encompass planes, helicopters, tanks, transports and even sailing vessels. A character would use this proficiency when attempting particularly risky feats of piloting, such as in combat or attempting a dangerous landing.

**Vehicle (Space):** These vehicles were designed to be used primarily in space, and can encompass everything from space taxis, shuttles, cargo tows and lighter craft all the way up to battlecruisers. A character would use this proficiency for particularly daring feats of piloting, such as in combat or attempting risky maneuvers.
Systems Proficiencies

Fifth age characters are, generally speaking, the crew of star ships. Even the surliest grunt or most erudite scholar has some practical skill on such a vessel, or they would not have been allowed onboard a ship as crew. All characters have the ability to choose at least one systems proficiency, chosen from the list below, and are proficient with all subsystems of their chosen proficiency:

**Weapons (WEAP):** Weapons officers are proficient in the operation of ship based weapons systems, and can operate Weapons subsystems with proficiency. Such a character might be called upon to fire at an enemy ship, clear debris out of a flight lane or to shoot down incoming missiles.

**Engines (ENGI):** Engines officers (often called Engineers) are responsible for maintaining and operating the massive rocket thrusters that propel starships, their Hyperdrives, monitoring fuel, heat radiation, and a host of other high energy tasks. A character filling this role might be asked to overload a ship’s thrusters for a temporary boost in speed, overheat the reactor to shave a bit off of a hyper-jump charge, find a way to conserve fuel or propellant to make it on a particularly tight burn, or even just to find a way to put out literal or metaphorical fires in systems.

**Hull (Hull):** Hull officers tend to be mechanics and repair men, as well as cargo managers and pursers. Dealing with the physical realities of the ship, her structure, cargoholds, life support systems, armor maintenance and other seemingly mundane tasks, such a character might be called on to patch a breach in the hull, spin up a habitation module to disorient boarders, or figure out how much scotch could be given as a bribe to a stationmaster and still break even on this run.

**Computers (COMP):** Computer Operations Officers focus on the wellbeing and safe operation of the vital computer systems and networks that run almost every conceivable function onboard the ship. A character specializing in Comp Ops might be called on to repair an EMP fried navi-computer, fight off hostile intruders in the ships database, or purge a nasty computer virus from ship’s systems.

**Sensors (SENS):** Sensor Officers, often called Scan Techs, oversee, literally, what the ship can detect. Watching flight lanes, coordinating the positions of other ships and orbital objects in a system, surveying planets and asteroid belts, and keeping an eye on any other ships nearby. A character serving this role might be asked to find water asteroids for re-massing, determine the best place to land on an alien world, or figure out if that incoming ship has its weapons hot and primed to fire, or not.

**Communications (COMM):** Communications officers, are the nerve center of a starship in flight. In constant communication with personnel all over the ship, relaying orders as well as being the gateway to offship information, pinging sensor buoys, coordinating with station, hailing other ships, and in times of a fight, using all that fancy equipment to lie to enemy ships as adroitly as possible about where they actually are. A comm officer might be asked to jam communications on a patrol boat long enough to slip out of system before reinforcements arrive, find a way to communicate with an alien species, or to slip out of a missile lock.
**Feats**

Fifth age functions best with feats, allowing a wider level of customization for characters. The core assumption of the game is that a character will gain a feat at levels 3rd, 6th and 9th level along with their ability score increases.

It is not recommended to hand out feats from the SRD, as they are often much broader in scope and greater in power than the ones provided here. A Fifth Age feat is approximately half as powerful as a normal 5e feat, in most regards.

---

**Optional Rule: 1st Level Feats**

To add a little customization and breadth to characters created at first level, your DM might allow you to give up some ability scores to start the game with a bonus feat. 2 points of point buy, or reducing an ability score by 2, to a minimum of 11 are good places to start.

Maybe in exchange for a roleplay flaw, ask your DM.

---

**Ambidexterity**

*Prerequisite: Extra Attack class Feature*

Intense training and perhaps a little neurosurgery have allowed you to become fully ambidextrous. While you are wielding a one handed weapon in each hand and you make a two weapon fighting attack using a bonus action, you can make an additional attack with that weapon.

**Bulletstorm**

Spray and pray! You have become skilled with burstfire weapons, and can cover larger areas. Whenever you use the burstfire action, you can target an area ten feet wide, and fifteen feet long, or an area five feet wide and thirty feet long.

**Combat Focus**

You can choose a combat style from the following list. After choosing a style, you cannot select it again, even if allowed to select another combat style. Note that this feat duplicates the Combat Focus feature of the Soldier and Savage classes, and a Focus selected with either cannot be selected with the other. Either you have the focus, or you don’t, no stacking.

- **Defense Focus**
  While you are wearing armor, you gain a +1 bonus to AC.

- **Long Arm Focus**
  You gain a +2 bonus to attack rolls made with two handed ranged weapons.

- **Melee Focus**
  When you roll a 1 or 2 on a damage die for an attack you make with a melee weapon that you are wielding, you can reroll the die and must use the new roll, even if the new roll is a 1 or a 2.

- **Side Arm Focus**
  While wielding a one handed ranged weapon and no weapon in your off hand, you deal an additional 2 damage per attack.

- **Unarmed Focus**
  When you make an unarmed strike, add your proficiency bonus to the damage roll.

**Covering Fire**

You are adept at laying down covering fire. While wielding a ranged weapon you can, as a bonus action, designate a space, you are considered to be threatening an area five feet around that space, and can make opportunity attacks with your ranged weapon or participate in flanking if those rules are being used. Two characters with this feat can actually flank with ranged weapons.

**Commanding Officer**

Characters under your command receive temporary HP equal to your level plus charisma bonus at the start of each combat encounter. If you are reduced to 0 hp or less, they lose any remaining temporary hp granted by this ability.
Creatively Anachronistic
Your interest in history and primitive cultures has led you to train in their weapons and armor. You gain proficiency in Archaic Weapons and Archaic Armor, and can add half of your proficiency bonus to checks involving primitive culture and technology.

Eagle Eye
You have trained until you have become an excellent shot. Increase the normal range of your ranged weapons by an amount equal to their base normal range. (A 30/90 weapon becomes a 60/90 weapon for you.)

Heavy Armor Specialization
Your time wearing the heaviest of armors has allowed you to learn many tricks to avoid damage. When you take damage, you can use your reaction to reduce it by an amount equal to 1d10 plus your constitution bonus. You can use this ability twice before you take a short or long rest.

Heavy Munitions
You have trained in the use of heavy weapons, granting you the following abilities:

- You gain proficiency with heavy weapons and Powered Armor.
- You can use your strength bonus for attack and damage rolls with heavy weapons, and to calculate their saving throw DCs as appropriate.
- Whenever you score a critical hit, you can roll 2d6 and add it to the extra damage of the critical hit.

Judo
You have trained to include a wide variety of holds and throws in your hand to hand fighting repertoire, gaining the following abilities:

- Whenever you make an unarmed attack against a target, you can use your reaction to attempt to grapple the target.
- You can use your action to attempt to pin a target you are grappling. Succeed on an opposed Athletics check to grant both you and the target the restrained condition until you release them or they break free.
- When you use the Shove action you can both knock a creature prone, and push it 5 feet.

Killing Spree
You take particular glee in seeing your enemies fall before you, with each kill working you up into a bloodthirsty rage. Whenever you reduce an enemy to 0 hp, you can make an attack as a bonus action or as a reaction.

Kung Fu
Prerequisite: 5th level character
Your training in the martial arts has reached the point of true mastery. Whenever you use the attack action to make at least one unarmed attack, you can make an additional unarmed attack as part of that action. Additionally, your unarmed strikes deal an additional 1d6 damage to targets that you are grappling.
Light Armor Specialization
You have trained extensively wearing light armor, and are exceptionally agile while lightly armored. While wearing light or no armor, your movement speed is increased by 10 feet, and opportunity attacks against you gain disadvantage.

Lock and Load
You have trained in the use of military grade equipment, and have the certifications and licensing to prove it, gaining proficiency with Civilian Weapons, Protective Equipment, Military Weapons and Combat Armor.

Martial Artist
You have trained in the martial arts, allowing you to use your entire body as a weapon. Your unarmed strikes count as weapons and deal 1d6 bludgeoning damage, and can use either strength or dexterity for the attack and damage rolls. Once per turn, as a bonus action, you can make an unarmed strike. When you make an unarmed strike against a target you are grappling with, that attack gains advantage.

Medium Armor Specialization
You are accustomed to wearing medium armor, and do not find it as constrictive as others. While wearing medium armor, you can add up to 3 points of your dexterity bonus to your armor class instead of 2, and can use your reaction to reduce the damage you take from an attack by 1d6 + your con bonus. If you use this ability, you can not use it again until you take a short or long rest.

Melee Specialization
You have specialized your training in melee combat, becoming truly fearsome in hand to hand combat. You can add your proficiency bonus to your damage with melee weapon attacks. Any creature you threaten with a melee weapon provokes an opportunity attack when they make an attack with a ranged weapon.

Sharpshooting
Your marksmanship is unbelievably precise. You gain +2 to all of your attack rolls against a target with ½ or ¾ cover. Against targets without cover, you deal an additional 2 damage of the type the weapon used normally deals.

Sidearm Specialization
You have trained extensively with one handed firearms, and are able to put a surprising amount of shots down range. While wielding a one handed ranged weapon in one hand, and no weapon in the other hand, once per round you can, as a bonus action, make a weapon attack.

Sniper
Prerequisite: 5th level character
Your marksmanship training has enabled you to make incredible shots. While wielding a two handed ranged weapon you can, as an action, make a single attack with advantage. If both d20s rolled to make this attack would have resulted in hits, roll the weapon’s damage dice twice.

Suppressing Fire
With much practice, you have become skilled at suppressing enemies with your burstfire. When you make a burstfire attack, all targets in the area of effect must make a wisdom save (DC equal to 8 + proficiency bonus + your dexterity bonus) or have their speed reduced by half until your next turn. A creature that takes damage from the burstfire attack gains disadvantage on this save.

Training
You gain training in the use of specific equipment. Choose three total of armors, weapons, toolkits or systems and gain proficiency with those items. This feat can be taken multiple times, granting proficiency with three new items each time it is taken.
As humanity spills into the stars, it takes with it a host of competing corporations, struggling traders, dangerous technologies and leaves volatile markets in its wake. In the bustling marketplaces of stations and worlds a wide variety of equipment can be purchased, built locally or imported, the following tables represent a select grouping of those goods.

**The Solar Credit**
Backed by the First bank of Sol, one solar credit has a practical exchange value of one day’s worth of rations, environment and upkeep for a person space side. With each local government printing their own currency, and no fewer than 300 competing physical and cryptocurrencies on earth, the Solar credit was created as a commodities backed bond to facilitate currency exchanges between different markets.

Physically, a Credit Chip has a diameter of 25mm, and weighs 10 grams, being approximately the size of an American quarter dollar. These chips are minted by the First Bank of Sol with a shielded molecular storage medium containing a unique code held by the Solar Exchange on earth. Any tampering with a Credit chip’s storage causes it to self-destruct and prominently display a marker on the surface of the coin. Effectively proven tamper proof, the integrity of a Credit Chip is accepted in any reputable establishment anywhere in the human influenced zone.

As of the writing of this document, a Solar Credit has a worth of approximately $250 USD, as reflected by the solar exchange’s commodity basket of life support supplies, and can be exchanged for 24 solar hours of life support, lodging, food and water on a ship or orbital installation, approximately six times a similar amount to live planetside in Virginia.

### Protective Gear

Designed primarily to protect its wearer from a hostile environment, not actual combat, most Protective Gear armors offer minimal defenses but rather resistance to hazards. These armors routinely provide basic eye and ear protection.

A skinsuit differs from other armors in that an unmodified skinsuit can be worn underneath other armor and still grant most of its benefits (breathable atmosphere, vacuum safety, mag booting, etc). As such, it is commonly assumed that most characters wearing an armor have a skinsuit on underneath it if they plan on going into space.

A skinsuit uses a low pressure oxygen mix that requires the wearer to pre-breathe for an hour or risk the bends, a trade off that allows it to use 4 hour 1 pound breathing cartridges.

### Skinsuit

Skinsuits are, not surprisingly, like a second skin, using elastic pressure of the suit’s material to protect the wearer from vacuum and the detriments of zero gravity. These suits contain thermal conductors and heat radiators in case a wearer becomes overheated as well as heating packs to regulate temperature if the wearer becomes too cold.

The Skinsuit is ubiquitous among spacefaring humans, and it is widely produced by many companies, since each suit must be custom fit to the wearer.
**Body Armor:** Designed for police action against armed assailants, this heavy suit offers the best protection available on the civilian market. With layers of anti-ballistic gel, heat dispersive fiber and ceramic reinforcement in addition to conventional protection against knives and blunt force trauma, this armor keeps its wearer as safe as anything straight off the rack can. A character’s dexterity does not factor into their AC while wearing this armor. While wearing this bulky armor, a character’s movement speed is reduced by 10 feet.

**Riot Shield:** Designed to complement Body Armor, this piece of equipment enables its user to wade into even the thickest of mobs of rioters with little fear, and even offers its user an answer to ranged weapons and Molotov cocktails.

This heavy shield offers its wearer +1 AC while it is wielded. As a bonus action its user can gain ½ cover. (This confers +2 bonus to ac against all attacks, and +2 to dexterity saving throws.)

**Armored Skinsuit:** Similar to a standard skinsuit, except with armored plating to protect from hazards like debris and small arms fire. Sometimes referred to as a Hardsuit, these variations have many of the same features as normal skinsuits, but offer a more rugged exterior as well as the benefits of using a full atmosphere of pressure, and requiring no pre-breathing. The downside of these benefits is that the 4 hour breathing cartridges for this suit weigh 10 pounds. A character wearing an armored skinsuit has restricted movement, and cannot add more than 2 to their armor class from dexterity, and their movement speed is reduced by 5 feet.
**Archaic Armor**: This armor might be an antique, or just produced on a primitive planet, either way, it was never designed with advanced weapons in mind.

Light archaic armor offers an AC of 11+dex mod, medium archaic armor 12+dex (max of 2), and heavy archaic armor 15 while imposing disadvantage on stealth.

Archaic shields provide a +1 bonus to AC against modern weaponry, and a +2 bonus against archaic weapons.

Archaic armors can only possess one modification.

**Combat Armor**

Militaries and security forces develop defensive systems like these to protect the lives of their personnel in combat situations. This grade of armors are not illegal, but in civilized space requires registration and a license, and might be restricted in certain areas. These armors confer basic eye and ear protection for the wearer as well as basic functions as determined by your DM.

**Assault Shield**: Designed to supplement tip of the spear assault forces in boarding actions, carrying one of these is like carrying a mobile bulkhead. Equipped with maglocks and anchors, these shields can be deployed in a fixed position, offering a soldier a fixed firing position for cover.

A character wielding this shield gains a +2 bonus to ac against all attacks. As a bonus action, this shield can be deployed as a source of cover, granting up to two characters ½ cover from appropriately angled attacks. This allows the user to operate a two handed weapon from a position of cover. As a reaction, a character wielding this shield can impose disadvantage against a single attack they can see the source of.
**Battle Plate:** Using rigid armor plates and advanced fluidics, this armor is designed to protect its wearer from the most intense of firefights. This armor will reduce its wearer’s ability to maneuver, restricting their ability to add dexterity to their armor class to a maximum of +2.

**Low Profile Battle Suit:** Basically a skinsuit built from the molecules up for combat protection, this technology was developed to retain as much mobility as possible for its wearer while offering reasonable protection.

**Exo Suit:** Loaded with armor plating and shock absorbing gels, even with hydraulic assists this suit still requires a great deal of physical strength to operate successfully, and hampers the wearer’s mobility. A character’s dexterity does not factor into their AC while wearing this suit.

</table>
Weapon Properties

Ammunition: A weapon uses ammunition when it is fired, consuming energy and expending projectiles as appropriate. Lasers and blasters use power packs, and canisters of gas for lasing medium and coolant. Stun weapons use battery packs and cartridges of capacitor darts. Gauss weapons, mass drivers, and shredders use battery packs and metal slugs.

Burstfire: Weapons with the burstfire property can be used to make normal single target attacks, or by spending 10 pieces of ammunition, be used to target a 10’x10’ within normal range, and spray it with fire. Targets within the area must make a dc 15 Dexterity save or take the weapon’s normal damage. If an attack made with this weapon would be at disadvantage, the saving throw made to resist its effects is made with advantage.

A character wielding a weapon with the burstfire property can use a bonus action to increase the damage of the next normal attack made this round by one die at the cost of using 2 additional pieces of ammunition.

Nonlethal: Attacks by this weapon are configured to be nonlethal to human targets. Whenever a target is dealt damage by this weapon that would reduce him to 0 hp or below, it instead reduces the target to 0 hp, and they gain the incapacitated condition.

Reload: A weapon with this property only has enough, ammunition, energy or coolant (as appropriate) to make a limited number of shots before it must be reloaded. Reloading is a bonus action for most weapons and a normal action for heavy weapons.

Crude: A weapon with this trait is considered to be so simplistic or primitive that it can only possess a single mod.

New Damage Types

Laser: Lasers are focused beams of light. Beam lasers heat up a target, and blasters are so hot they cause the matter they hit to violently explode. Many creatures without eye protection in areas where laser damage is dealt must make a DC 10 constitution save to avoid being blinded.

Ballistic: Ballistic weapons deals damage by propelling a mass (projectile) travelling at high velocities, conferring kinetic energy into a target it strikes. Many creatures without ear protection in enclosed areas where ballistic damage is dealt must make a DC 10 constitution save to avoid being deafened.

Radiation: Caused by Ionizing radiation, and is made up of subatomic particles moving at speeds over 1% of the speed of light. Radiation is a particularly fearsome damage type that few weapons deal that has additional effects on the target beyond just dealing HP damage. Whenever a creature takes Radiation damage, reduce their maximum hit points by an amount equal to the damage dealt. This loss can be recovered with the appropriate drugs, bed rest, and access to suitable facilities and equipment. Check the Medical Supplies section for Radcleanse.

Special Weapons

Anti-Armor Rifle: This heavy rifle uses coilgun technology to fire armor piercing slugs at immense velocities, penetrating any known armor, ignoring damage resistance. This weapon can penetrate walls and ignore cover. Attacks made with this weapon can ignore ½ cover. Reduce its damage dice by one step if used to shoot through ¾ cover (which denies the target a cover bonus), or by two steps to ignore total cover (such as using thermal imaging to fire through a wall).

Archaic Weapon: These weapons are notoriously primitive. Simple cleavers, longswords, spears, bows, crude axes, and so forth. See the section below for detailed archaic weapon rules.

Gatling Laser: This weapon has six rotating laser barrels, and can lay down a tremendous amount of fire. The first time each round its user makes a burstfire attack with this weapon, targets in the affected area must make an additional dexterity save at DC 15 or take its listed damage.

Holdout Laser Pistol: A character gains advantage when concealing this weapon.

Flamer: This weapon fires a 15 foot long cone of flame or a 30 foot long line of flame. Each target caught within the area must make a Dexterity save, DC 15. A creature takes the listed weapon damage on a failed save, or half as much on a successful one. If a creature fails its save against this effect, they are set on fire, taking 1d6 fire damage at the start of their turn, until an action is used to extinguish them.
**Mass Driver:** This weapon can penetrate walls and ignore cover. Reduce its damage dice by one step if used to shoot through ½ cover (which denies the target a cover bonus) or by two steps if ignoring ¾ cover.

**Power Weapons:** This class of weapon uses a power source located in the handle, a compressed gas container and a number of mounted jets to allow the weapon to be effective in a zero gravity environment as well as to assist the user in making more powerful attacks.

**Rocket Launcher:** A rocket launcher fires special rocket propelled grenades whose effect duplicates those of the listed grenades with the following exceptions. A creature firing a rocket launcher designates a target within 360 feet and makes an attack roll against AC 10 if the target is within 120 feet, and AC 15 if the target is within 360 feet. If this attack misses, determine a random direction, the grenade impacts 3d6 x 5 feet in that direction if the target was within 120 feet, or 5d6 x 5 feet if the target was within 360 feet.

A rocket propelled grenade has twice the cost listed for a normal grenade below, increases its damage dice by one step, and uses a modified saving throw calculated as such: 8 + Dexterity bonus + Proficiency Bonus (if proficient with the launcher).

**Shredder:** A shredder is essentially powerful electromagnet that projects a magnetic vortex filled with whirling microfilament blades. The user of this weapon can, as an action, designate a 15 foot cone until the start of their next turn. When a creature enters the area for the first time on its turn, or starts its turn there, it must make a DC 13 Dexterity save, taking the listed damage if they fail the save or half as much if they succeed. Reloading this weapon requires a normal action.

### Grenades

Once per turn, as part of an attack action a character can throw a grenade at a point up to 60 feet away as an attack (Meaning a character with multi-attack could throw a grenade and attack with an equipped weapon as part of a single attack action). To make this attack, roll a Strength (Athletics) check DC 10 if the target is within 20 feet, or DC 15 if it is within 60 feet. If the check fails, the grenade impacts 1d6 x 5 feet from the desired point in a random direction if the target was within 20 feet, or 2d6 x 5 feet if it was between 20 and 60 feet away from the thrower.

</tbody>
</table>

**Frag Grenade:** A character caught within 15 feet of an exploding fragmentation grenade must make a dc15 dexterity saving throw, taking 5d6 ballistic damage on a failed save, and half as much on a successful one.

**Anti-Armor Grenade:** Designed to cripple and eliminate heavily armored personnel and lightly armored vehicles, a character caught within 15 feet of an exploding grenade must make a dc15 dexterity saving throw, taking 5d8 ballistic damage on a failed save, and half as much on a successful one. When this weapon deals damage to a target with Armor HP, the damage dealt by the attack is dealt both to the target’s normal as well as armor HP.

**Smoke Grenade:** Create a cloud of smoke 15 feet across at the point of impact. The cloud confers ½ cover (soft) to all creatures within it.

**Stun Grenade:** A character caught within 15 feet of an exploding stun grenade must make a dc15 constitution saving throw, taking 4d6 electric damage on a failed save, and half as much on a successful one. If a character fails a save against a stun grenade by 5 or more, they gain the stunned condition for one minute.

**Flashbang Grenade:** A character caught within 15 feet of an exploding flashbang grenade must make a dc15 constitution saving throw, becoming blinded and deafened for one minute on a failed save, and for one round on a successful one. Creatures wearing
modern equipment can not be affected by flashbangs more than twice in protective gear, or once in combat armor during a single encounter.

**Archaic Weapons**

Archaic weapons conform to basic damage profiles for the sake of simplicity, but can be specialized for needed depth. Note that archaic melee weapons use strength for their attack and damage rolls, and ranged weapons use dexterity for their attack and damage rolls.

When choosing a weapon you can choose one of the types below to gain a particular type of weapon:

**Blade:** Blades such as swords and machetes deal slashing or piercing damage, and are particularly reliable. Whenever rolling weapon damage you can roll the damage twice and select the total you prefer.

**Hafted:** Hafted weapons like axes, picks and hammers are particularly brutal weapons, dealing slashing, piercing or bludgeoning damage and whenever the maximum value is rolled on their damage die, you can roll an additional die of that type and add it to the total. A hafted weapon can be thrown with a range of 20/60 by reducing its damage die by one step.

**Polearms:** Polearms such as spears deal piercing or slashing damage and can extend their reach. Two handed polearms have a reach of 10 feet, and one handed polearms can extend their reach as such with a bonus action, or be thrown with a range of 20/60.

**Ranged:** Ranged weapons deal piercing damage, and can be simple weapons (such as bows, slings and darts) that deal the damage-listed, or complex weapons (like crossbows and primitive firearms) increasing their damage die by a step, but gaining the Loading condition that only allows them to be fired once in a round.
Packs

Characters usually begin the game with a pack containing a variety of minor items not worth tracking individually but which might be of use, and reflect their past and specialties.

<table>
<thead>
<tr>
<th>Packs</th>

<tr>
<td>Surveillance Pack</td>
<td>45</td>
<td>22</td>
</tr>
</tbody>
</table>

**Explorer:** Includes a backpack, a sleeping bag, survival tools, a mess kit, flashlight, 10 flares, 20 days of rations, canteen, emergency beacon and 50 feet of rope.

**Infiltration:** Includes a backpack, door alarm, flashlight, 5 days of rations, glass cutter, wall climbing cups, disguise kit, bug detector and a tiny camera.

**Spacer:** Includes a duffel, spare coverall, suit patch kit, entertainment device, towel, toiletries, and 150 feet of cord.

**Surveillance:** Includes a backpack, binoculars, infrared scope, camera drone and controller, 2 sticky cameras, 2 radio tags, 2 audio tags and a thermos.

Toolkits

A tool enables a character to do something difficult or impossible without it, such as repair a ship, destroy a bridge, forge an access card or cheat at cards (particularly hard without any cards!).

**Artisan's tools:** These tools allow you to pursue a particular craft or trade, such as brewing alcohol, tailoring, cooking, sculpting, carving wood, and so forth. Each type of craft is a separate proficiency, but it is a safe bet that if you want to make something, there is a particular artisan’s toolkit for it.

**Astro-surveyor:** This is mostly a specialized personal computer and specialized interface with reference libraries of star charts, specialized software for the charting of stellar phenomena and mapping of systems. If a character wants to map an asteroid belt, or determine if a distant star might have habitable planets, this device will let them decipher data from a telescope or ship’s observatory.

**Demolitions Kit:** This kit contains all the necessary tools for the creation and rigging of bombs and explosives, as well as defusing them. While the kit contains no explosives, it does contain detonating wire and transmitters, timers, radio controllers and a database of known demolitions equipment specifications.
**Disguise kit.** This kit contains a variety of cosmetics to allow a person to pretend to be another. This contains a variety of contact lenses to change eye color, hair dyes, fake fingerprint gloves, and minor wardrobe items like scarves, glasses, and fake piercings as well as gender covering items like urinary pipes, false breasts, tiedown tape and the like.

**Forgery kit** This kit contains the hardware and software needed to hack an identity chip, rewrite a keycard, scan and reproduce a signature, forge a document, lift and duplicate fingerprints, produce a false retina lens, and the like, allowing a character to spoof many types of security measures.

**Gaming set** This set contains all the pieces needed to engage in a type of gaming such as chess, poker, dice, videogames or tabletop RPGs. Proficiency with a gaming set allow a character to add their proficiency bonus when playing that game against another character.

**Lock picks.** Proving the ages old adage that ‘locks are only good for keeping honest people honest’ this tool can be used to subvert locking mechanisms on doors and other objects. It contains a variety of mechanical lock picks as well as a nifty codebreaker for those pesky digital systems. Certain types of locks cannot be subverted with this kit without substantial prep work, such as acquiring retinal scans, thumbprints, voice samples or even more grisly methods.

**Med Kit** Used for emergency medical situations, this toolkit allows a character to treat deadly wounds in the field. It is detailed further in the Medical Supplies section.

**Musical instrument** This is a single type of musical instrument such as a violin, keyboard or set of bagpipes. Each type of musical instrument is a separate proficiency.

**Planetary surveyor** This is a specialized personal computer and interface designed to allow a character to interpret scans of planetary bodies and regions, analyzing them for mineral deposits, soil and water quality and the like. A character would use this equipment to produce reliable planetary maps, determine a landing or colony location, or to parse complicated climatological data.

**Repair** This kit contains the many specialized and personal tools a skilled mechanic requires to service, repair and modify equipment, synthetics and vehicles. A character wanting to repair a hull breach, reattach a robot’s arm or add an enhanced scope to their rifle would make use of this toolkit.

A Repair kit may be used 10 times before it requires replacement supplies costing 25 credits. Until these replacements are acquired, all checks made with this tool kit are made with disadvantage. A character proficient in the Engineering skill reduces the DCs of the following uses of the repair kit by 5.

- Make a DC 20 Intelligence (Repair Kit) check, and if successful, restore to a robot or synthetic a number of HP equal to 1d6 plus the user’s intelligence bonus and the target’s maximum amount of hit dice. Note that a creature cannot regain HP from this use of any Repair kit until they finish a long rest. Make a DC 15 Intelligence (Repair Kit) check to reboot a disabled (0 hp) synthetic, which may make a DC 10 constitution check to regain 1 hp.
- With a DC 15 Intelligence (Repair Kit) check, repair up to six synthetics, allowing them to regain an additional 1d6 hp if they spend any healing dice for healing during a short rest. A character can only benefit from one such application per short rest.

**Robot Command Interface:** While not specifically a toolkit, a character can gain proficiency with this device as if it were with the Technician class, and with the Training feat. It is detailed more accurately in the Robots section of this chapter.
Medical Supplies
Life out there can be dangerous, and a host of medical advances have been made, offering a number of efficacious, though expensive, treatments for a variety of ailments. While cheaper alternatives to all of these expensive medicines exist, they require bulky equipment, longer recovery times and skilled application. So remember, you’re not paying for a few hitpoints, you’re paying to put something in your pocket that a fully staffed clinic normally does. Most drugs are applied by vibrodermic syringe, quickly and painlessly. Standard features on skinsuits include a med-port for the use of these syringes.

To apply a dose of a medicine is an action that can be performed on oneself or others.

<table>
<thead>
<tr>
<th>Medical Supplies</th>

</tr>
</tbody>
</table>

**Antibiotic:** This drug allows a target to immediately re-roll a saving throw against a disease or infection acquired in the last 8 hours, with advantage. If successful, all remaining effects of the disease or infection are negated.

**Antivenom:** When applied, a character can reroll a saving throw against a poison effect acquired in the last one minute. They lose the poisoned condition if they have it. If damage was taken from poison, the character recovers HP equal to half of that damage dealt.

**Medkit:** This is a collection of medical supplies and tools in a handy carrying case. A medkit contains enough supplies for ten uses until it must be replaced. A character proficient in the Medicine skill reduces the DCs of the following uses of the medkit by 5.

- Make a DC 20 Wisdom (Med Kit) check, and if successful, heal a target a number of HP equal to 1d6 plus the user’s wisdom bonus and the target’s maximum amount of hit dice. Note that a character cannot regain HP from this use of any medkit until they finish a long rest.
- Make a DC 15 Wisdom (Med Kit) check to stabilize a dying creature.
- With a DC 15 Wisdom (Med Kit) check, treat up to six creatures, allowing them to regain an additional 1d6 hp if they spend any healing dice for healing during a short rest. A character can only benefit from one such application per short rest.

**Painkillers:** Painkillers render a creature resistant to the effects of pain, allowing them to spend and roll a number of hit dice up to their constitution modifier (minimum of 1) to increase their temporary and maximum hit points by the amount rolled for a period of up to an hour. A character cannot benefit from this effect again until they have taken a short or long rest.

**Radcleanse:** A mix of potassium chlorate and proprietary compounds, this medicine fights radiation sickness by flushing radiation from the body. A character who is administered a dose can a hit die to restore maximum HP reduced by radiation damage by an amount equal to the die rolled plus their constitution bonus. A character cannot benefit from another dose of radcleanse until after a long rest.

**Sprayskin:** This miraculous substance is applied from an aerosol container, and immediately sterilizes a wound, covering it with a skin colored layer of material that seals a wound and acts as a growth medium for the body’s cells, quickening healing while serving as replacement flesh. Applying this product is an action that recovers 1d6 hp and if the user is
proficient in the Medicine skill, allows the healed character to spend a hit die for healing.

**Stimulant:** This medicine heightens a character’s alertness and energy. Administering a dose is a bonus action that sets a character’s initiative to $20 + \text{dex}$ bonus for the duration of the current encounter and grants advantage on all perception and investigation ability checks and initiative checks made for the next hour. Additionally a character who uses stimulants removes all their current levels of exhaustion for one hour, at the end of which they gain a level of exhaustion for each one removed, plus an additional one.

___

**But there’s not even a...**

*This document does not go to great length to describe every last object sold in ports and stores. Almost any item can be printed out on ship, or purchased in a starport, station or trading post. Nearly any conceivable item can be bought except at the worst backwaters.*

*A general rule is that sundry items are $0.05 credits per pound, adjusted for demand, local scarcity and greed. Electronics start at 5-10 credits and range up to 100 or more, depending on function, sophistication, and local markets.*
Robots

With manpower costs and hostilities both on the rise, it is no surprise that humanity has turned to robotics on the battlefield as well as in industrial applications. Following is a list of a number of common models of combat and utility robotics platforms.

Most field deployable combat robots break down into handy kits or cases that can be stored, stacked and deployed with varying levels of ease. Deploying a robot from its stored mode requires an action (or a bonus action for Technicians with fast hands).

Killer robots from outer space

Robots at the table are a very cool thing... in theory. A savvy technician commanding an army of soldiers made of metal and plastic, knowing neither fear nor pain is certainly an awe inspiring image, but comes with several complications.

Before deploying an army of robots, determine if it is the right choice for the game you are playing. Do they add to, or subtract from the group's play experience? With too many simple 'bots, a player's turn can take forever, casting aside one of 5e’s better selling points: quick and simple combat. There are also matters of spotlight hogging. When the marine gets a shot off then passes, and the Robomancer makes 4 attacks with his robotic army, it can really take the fun out of being “combat guy”.

Expect to see combat 'bots limited in various civilized regions, stations, and certain planets. For the same reason no sane group would allow a power armored mercenary with a rocket launcher aboard their station or ship, so too will a squad of combat 'bots be turned aside. It is expected that leveraging the full might of a swarm of lesser 'bots will take dedicated forethought and planning, meaning it is usually easier and better for all involved to pack just one or two robot minions for easier, faster combats.
Robot Command Interface: A character proficient with a Robot Control Interface (RCI) can attune to it and to any number of robots with a combined CP score (Control Points) equal to or less than that character's proficiency bonus during a short or long rest. The only way to gain proficiency with a Robot Control interface is through being a Technician or with the Training feat. (Note that cyborgs linked with an RCI do in fact increase their proficiency bonus by one for their total CP of controlled robots.)

An RCI requires a free hand to carry and use, meaning one cannot be used along with a two handed weapon, two one handed weapons, or a one handed weapon and a shield.

Robot Repairs:
It is inevitable that robots will eventually become damaged and require repairs. Whenever a creature with attuned robots takes a short rest, they may make repairs on a number of robots equal to their intelligence bonus with a DC 15 Intelligence (Repair Kit) check and consuming one use of the repair kit per robot repaired. Success allows each robot to recover an amount of HP equal to its number of hit dice multiplied by the repairing character's intelligence bonus. A robot repaired in this fashion cannot be repaired in this manner again until its attuned controller takes a long rest.

A Robot reduced to 0 hp is destroyed and might serve as plot relevant scrap at best.

Robot Commands
Robots are only semi-autonomous, requiring direct user input before they take action. As an action, a character controlling a robot can use their readied Robot Control Interface to direct it to do the following:

- **Attack:** Robot attacks a designated creature until ordered to do something else, or until that creature is reduced to 0 hp.
- **Guard:** Robot defends a creature, and will delay using its action to attack the creature which last attacked the creature it is defending.
- **Follow:** Robot will follow the designated creature, remaining in an adjacent square if possible until such a time as a different order is given.
- **Assist:** Until directed otherwise, the robot will use the Help action every turn on the creature designated when this ability is used.
- **Defense:** Until directed otherwise, the robot will take the Dodge action each round and attempt to find cover if possible.
Deployable Turret MK I

**Attack**: +3  1d8 + 1 Slashing  Melee

**Medic Order**: Make a DC 15 Medicine check on a living creature, and if successful heal 1d6+4 and allow the target to spend healing dice. A creature cannot benefit from the medic order of a robot until it takes a short or long rest. This ability can be used ten times before the unit requires additional supplies costing 100 credits.

---

**Medic Bot MK II**

AC: 15  Speed: 30  CP 3  
HP: 44 (8d8+8)

Skills: Medicine +6  
Senses: Infrared, Passive Perception 9

Actions:  
**Attack**: +4  1d8 + 2 Slashing  Melee

**Medic Order**: Make a DC 15 Medicine check on a living creature, and if successful heal 1d6+4 and allow the target to spend healing dice. A creature cannot benefit from the medic order of a robot until it takes a short or long rest. This ability can be used ten times before the unit requires additional supplies costing 100 credits.
Modifications

Modifying a robot is a fairly straightforward process of sourcing the parts or mod kits at the following prices, and installing them with a DC 15 Intelligence (Repair Kit) or (Engineering) check. A Robot can possess any number of modifications, but its CP is increased according to the chart.

<table>
<thead>
<tr>
<th>Robot Mod</th>
<th>Cost</th>
<th>CP Modifier</th>
</tr>
</thead>
<tbody>
<tr>
<td>Armor Upgrade</td>
<td>$150</td>
<td>+½</td>
</tr>
<tr>
<td>Combat Upgrades</td>
<td>$500</td>
<td>+1</td>

</tr>
<tr>
<td>Weapon Upgrades</td>
<td>$250</td>
<td>+½</td>
</tr>
</tbody>
</table>

**Armor Upgrade:** The robot has enhanced armor plating and evasion software, granting it a +2 bonus to its armor class.

**Combat Upgrades:** Enhanced combat routines and protocols grant this robot an additional attack whenever it makes the Attack action.

**Durability Upgrade:** Materials upgrade grants the robot an additional 2 HP per HD.

**Enhanced Optics:** Superior optics and targeting software grant the robot +2 on all attack rolls.

**Self-Repair Protocol:** Robot can be ordered to Repair itself, healing 1d8 + its HD in HP. This order can not be given again until controller has taken a short or long rest.

**Upgraded Sensors:** Better sensor equipment grant the robot a +3 bonus to perception checks, effectively increasing its passive perception.

**Weapon Upgrade:** Better weapons equipment grant this robot a +1 damage bonus on all attack rolls per weapon damage die.
Chapter 8: Special Equipment

The many companies of sol produce a staggering array of new designs and theories every year, leading to labyrinthine routes from research to retail, and many fantastic technologies simply falling through the cracks and end up being lost during mergers, buyouts, or shifting politics. The items in this chapter are gifted to characters by eccentric scientists, grateful aliens, inscrutable government agents and corporate sponsorships. These items are moly-locked, a type of Physical Rights Management, and practically impossible to scan and duplicate, essentially being one of a kind.
Modifications

Modifications add new capabilities to weapons and armor, or enhance its base statistics. These modifications must either be constructed by a master engineer with an intimate knowledge of the device in question, or provided by the company producing the item. Modified items not approved by the company that originally manufactured it are illegal, and might run afoul of PRM (physical rights management) features, causing grievous risk of bodily harm. Modifications are most often produced by government institutions, or issued as limited edition collector’s items at hideous premiums.

Modifications come in three grades, or tiers, hereafter referred to as MK I, MK II and MK III. A weapon or armor can have three modifications, one of each grade.

Modifications come in varieties for specific weapons when found, bought, issued, stolen or gifted, and require a DC 15 Intelligence (Engineering or Repair Kit) check to install or remove in the field, in a process taking at least an hour.

Modifications can be transferred between weapons and armors of the same type, allowing a character to keep a variety of specialized mods that can be changed out before going into the field, allowing them to create specific loadouts and capabilities for a variety of missions and adventures. It is intentional that these modifications are not locked to a specific character and can be sold or traded amongst a group of player characters, or even held in common to be distributed as needs dictate, as they see fit. A ship’s armory might hold a certain number and type of modifications that grows as they gain levels and access to new technologies.

These rules assume that the primary method of distribution for weapon and armor modifications are by DM fiat as rewards during play. Player characters might seek out specific modifications, and might even be rewarded in these efforts, depending on the DM.

Given the nature of these modifications to change, perhaps dramatically, the balance of combat in the game, they are enabled under DM fiat by default. An alternative system is also introduced, allowing Mods to be purchased as if they were any other type of equipment. While this allows more precise choices in capabilities of player characters and increases a sense of player agency, it also removes much of the “specialness” of mods being used as rewards. As such, to feel special, it might be required to hand out higher tier mods a level or two earlier than their access is normally allowed. This is very much a DM issue, and should be able to be handled as such. Following is the table for this alternative system of commoditized modifications.

---

**Optional Rule: Predictable Mods**

Modifications are powerful, and serve as an excellent outlet for accumulated wealth of player characters. As such, restricting them to narrative devices and having them doled out only by DM fiat can restrict gameplay. Using this rule, Mods are available for purchase on the open market as if they were any normal item, scaling with level.

When the highest character level in the group is 3rd, MK I mods are easily found and available on the market, at 6th level MK II mods are available and at 9th MK III mods can be found for sale.

</tbody>
</table>

As represented on the table, a MK I mod costs five times a weapon’s price, a MK II costs ten times, and a MK III mod costs twenty times. Add in the base cost of the item in question, and you get the total MK III modified price, representative of buying the most expensive or finest version of an item on the market.

For example: A MK I Enhanced output mod for a laser rifle costs 750 credits, a MK II Enhanced output mod for the same weapon costs 1,500 credits. Both have otherwise identical stats, except for their cost and the fact that both can be applied to the same weapon, two mods of the same grade cannot (if a character had two MK I Enhanced Output mods, or a MK I Enhanced Output mod and a MK I Enhanced Burst mod they could not both be applied to the same weapon, as they both “fill” the MK I mod slot.

**Weapon Modifications**

**Armor Piercing Rounds**
*Requirement: Mass Driver, Anti-Armor Rifle*
When this weapon deals damage to a target with Armor HP the damage dealt by the attack is dealt both to the target’s normal as well as armor HP.

**Ease of Use Module**
*Requirement: Any Weapon*
This weapon is outfitted with special equipment to enable its use by anyone, anyone is considered proficient in its use.

**Efficient Burst**
*Requirement: Weapon with the Burstfire trait*
Weapon uses 3 less rounds when firing a burst. (For a total of 7 pieces of ammunition). A weapon can only have one mod of this type.

**Expanded Magazine**
*Requirement: Weapon with the Ammunition trait*
Expand the ammunition capacity of this weapon by an amount equal to its base ammunition capacity.

**Enhanced Output**
*Requirement: Weapon*
Increase the damage dealt by this weapon by 1 damage of the type dealt for every weapon damage die.

**FOF Limiter**
*Requirement: Weapon with the Burstfire Trait*
This smartgun is capable of limiting its fire to avoid friendly targets. When you make a burstfire attack, exclude any squares that contain friendly creatures.

**Heat Gun**
*Requirement: Laser weapon*
You can switch this weapon into Heat mode. While in heat mode, attacks made by this weapon gain advantage (and saving throws made against its burstfire attacks gain disadvantage), but deal one less die of damage, and deal Fire instead of Laser damage.
Increased Accuracy
*Requirement: Weapon*
Attacks made with this weapon have a +1 bonus to hit.

Irradiated Rounds
*Requirement: Weapon that deals ballistic damage with the Burstfire trait*
When you use the Burstfire trait of this weapon, increase the damage dealt by 1d8 Radiation damage. If you use the burstfire Bonus action to increase the damage output of a single attack, increase that attack’s damage by 3 Radiation damage. A weapon can only have one mod of this type.

Rapid Pulse Cycler
*Requirement: Blaster weapon*
This weapon scores critical hits on a roll of 19 or 20 (18-20 for marines) and adds an additional die of weapon damage to the total damage dealt by a critical hit. A weapon can only have one mod of this type.

Scattergun
*Requirement: Weapon with the Burstfire trait*
Once per round, when this weapon is used to make an attack against a single target, the attacker can make an additional attack against an adjacent legal target. A weapon can only have one mod of this type.

Short Barrel
*Requirement: Ranged Weapon*
Reduce the short and long range of this weapon by one half. This weapon does not suffer disadvantage when used to attack an adjacent target. Attacks against adjacent targets gain advantage.

Special Sighting
*Requirement: Ranged Weapon*
Increase the normal range of your ranged weapons by an amount equal to their base normal range. (A 30/90 weapon becomes a 60/90 weapon with this mod.)

Terminator Rounds
*Requirement: Stun Weapon*
The capacitor darts of this weapon have been modified to bypass the EMP protections of most synthetics. A synthetic or robot hit by an attack from this weapon must succeed at a DC 13 Constitution save, or become vulnerable to the Electric damage dealt by the attack.

Variable Tanks
*Requirement: Flamer*
This flamer has been modified to dispense other substances from its tanks. This weapon no longer sets targets on fire except when using normal flame fuel. When loading this weapon, you can use one of the following fuels:

- **Liquid Nitrogen:** Deals cold damage, on a failed save, slow target by 10 feet of movement for three rounds.
- **Corrosives:** Deals Acid Damage, on a failed save decrease the target’s AC by 1 (up to one time) until their armor is repaired with a DC 15 repair check.
- **Toxins:** Deals Poison damage, on a failed save target gains the poisoned condition for 1 minute.
- **Adhesive:** This attack does not deal damage, but on a failed save the target gains the Grappled condition until they make a DC 15 strength check.

</table>

Armor modifications cannot be applied to the same suit of armor more than once unless otherwise specified in their description.

Ablative Plating
*Requirement: Armor*
Whenever the wearer of this armor is dealt ballistic damage, reduce that damage by 2 if the armor is light or archaic, 4 if the armor is medium, or 6 if the armor is heavy.

Active Camouflage
*Requirement: Light or Medium Armor*
This armor grants the wearer advantage on stealth checks made to hide. As an action, the wearer of this armor becomes invisible to most methods of detection as long as they remain completely still. This ability can be used to up three times before the wearer takes a short or long rest.

Bulwark Expansion
*Requirement: Assault Shield*
When deployed, this shield extends to offer cover to an additional character.

Dampening
*Requirement: Skinsuit, Armored Skinsuit*
Wearing this armor grants resistance to electric damage.

Ease of Use Mod
*Requirement: Any Armor*
A character wearing this armor is considered to be proficient in its use.

Exoskeleton
*Requirement: Battle Plate, Exo-Suit*
This armor offers the wearer a +2 bonus to their strength score while worn.

Radiation Shielding
*Requirement: Skinsuit, Armored Skinsuit*
This armor confers resistance to radiation damage to the wearer.

Reflective Coating
*Requirement: Armor*
Whenever the wearer of this armor is dealt laser damage, reduce that damage by 2 if the armor is light or archaic, 4 if the armor is medium, or 6 if the armor is heavy.

Regenerative Armor
*Requirement: Armor*
This armor possesses a pool of Armor HP (5 for light, 10 for medium, and 20 for heavy) that are lost first whenever this character would take HP damage. Restore 5 of this HP whenever the character takes a short rest.

Riot Armor
*Requirement: Body Armor*
The wearer of this armor gains resistance to bludgeoning, piercing, and slashing damage.

Sensor Upgrades
*Requirement: Armor*
A character wearing this armor gains advantage on all perception checks, cannot be blinded or deafened and gains a +2 bonus to initiative checks.

Sloped Armor
*Requirement: Armor or Shield*
This armor grants +1 AC while worn. This modification can be applied up to twice on heavy armors.
Spacewalker

*Requirement: Armor*

This armor is equipped with a gas reservoir and numerous maneuvering jets that allow a character to move at their full normal speed within low gravity airless environments. A character gains advantage on all acrobatics and athletics checks made in such environments.

Spiked Armor

*Requirement: Archaic Armor*

The wearer of this armor can, as a bonus action, make a melee weapon attack that deals 1d4 plus the wearer’s strength bonus piercing damage.

Speed Suit

*Requirement: Low Profile Battle Suit*

Using patented Reflex Assist™ technology, the wearer of this suit receives a +1 bonus on all dexterity saving throws, Acrobatics and Stealth skill checks. When subjected to a critical hit, the wearer can make a DC 15 dexterity saving throw to reduce the attack to a normal hit instead.

Temperature Controlled

*Requirement: Armor*

The wearer of this armor gains resistance to Fire and Cold damage.

Trauma Monitoring

*Requirement: Armor*

When the living, biological wearer of this armor is reduced to 0 hit points, it releases a massive burst of drugs into the users systems, causing them to instead be reduced to 1 hit point. This ability cannot be used again until the character has taken a short or long rest.

Ultralight materials

*Requirement: Armor*

This armor does not confer a penalty to stealth checks if it otherwise would. A light armor with this modification is undetectable by most means of detection while set to a passive mode. A medium or heavy armor with this mod does not reduce the wearer’s movement speed.
Prototypes

Prototypes are produced to prove a concept and work out the bugs of a device before it goes into regular production. They might be experimental, unstable, or just use unproven and hideously expensive manufacturing processes. Whatever the case, these items are rarely if ever sold on the open market, though there are some circles of collectors known to traffic in such goods.

Some items will only function for a single owner identified by the device itself. Usually such items can be reset to accept a new owner, but this is a lengthy process, requiring at least a short rest and a bridge connector or paper clip, a process called Attunement. I’m sure the guys back at the lab wouldn’t be happy, but as long as there’s a dev mode, we can use it.

Prototype items can be almost anything a DM wants to imagine, and can easily duplicate effects of magic items from the DMG, in fact these limitations on attunement and rarity can be quite useful in gauging power levels. Something to keep in mind is that fancy gadgets require maintenance, charging and care, these were never production models mind you.

Cybernetic prototypes require surgical implantation, a DC 15 medicine check and 1d6 hours with access to a surgical suite.

Example Prototype Items

Artificial Immune System

*Prototype, Rare (Requires surgical implantation)*

This device is typically implanted in a subject’s abdomen where it nestsles amongst the intestines, where it controls a multitude of tiny robots throughout the body, protecting the wearer from a variety of ailments. A creature with this implant is immune to disease and poison and whenever they roll less than 5 when spending a hit die for healing, they can instead treat that roll as if it were a 5.

Chainsword

*Prototype, Rare (Requires attunement)*

Looking like nothing quite so much as the bastard son of a claymore and a chainsaw, this weapon exchanges all sense and reason for sheer intimidation and brutality. With a “blade” composed of thousands of spinning “teeth”, this device can rend through a target in a most gory and visceral manner.

This weapon attacks as a one handed melee weapon dealing 3d6 slashing damage (Versatile, 4d6), and on a critical hit deals an additional 14 damage and at DM’s discretion might sever a limb from the target.

Cybernetic Subprocessor

*Prototype, Rare (Requires surgical implantation)*

This item serves as an onboard computer interfaced directly with a character’s brain, greatly increasing recall and reasoning capabilities, setting their intelligence to 19 regardless of whether it was higher or lower before.

Genetic Enhancement (Constitution)

*Prototype, Very Rare*

This cryogenically frozen vial contains a specially coded retrovirus that will alter a human, making them tougher and more resilient. The character who uses this receives a permanent +2 bonus to their constitution, and has their maximum constitution raised by 2.

Jet Belt

*Prototype, Uncommon (Requires attunement)*

This device contains enough fuel to enable its wearer to briefly fly. A character can, as an action, gain fly speed 50 for up to ten rounds per day. Each round consumed costs 5 credits to refill, fuel of this grade is really out there.

Lazarus Device

*Prototype, Rare*

This device appears to be a man sized tank capable of holding a single human character. When the body of a character who died within the last 24 hours is...
placed within the device, over the next 24 hours they are restored to life. The machine cannot regrow limbs, but can reattach them if they are provided. After a single use, the machine goes into terminal shutdown and slags itself irrevocably.

A character revived by the machine rolls a d6 twice for his Intelligence, Wisdom and Charisma scores, adding the value of the first die to the ability score, and subtracting the second from it. A character might experience mood swings, traumatic nightmares, delusions and personality shifts.

Magnetic Deflection Belt
*Prototype, Rare (Requires Attunement)*
This device generates a reactive magnetic field good for deflecting shrapnel and bullets. If you fail a dexterity save to avoid ballistic damage from burstfire, grenades or explosives, you can use your reaction to instead make that save. It can be used up to three times before needing to be recharged for at least 2 hours per time it was used.

Raz-0B Automatic Fire Support Rifle
*Prototype, Rare (Requires Attunement)*
Designed to offer fire suppression options at long range, this unusual weapon combines many attributes of an automatic gauss rifle and mass driver sniper rifle, combined into one terrifying package.

Treat this weapon as a Mass Driver with an ammunition capacity of 30, and the Burstfire trait.

Spider Boots
*Prototype, uncommon (requires attunement)*
These boots allow a wearer to walk across most vertical surfaces, granting a character a climbing speed equal to their move speed, and allowing them to even stand on a ceiling in up to 2 gravities.

Targeting Adjunct
*Prototype, common (requires attunement)*
This targeting computer interfaces with all of a user’s weapons systems, as well as their visual systems, offering the user advanced options in weapons targeting. As an action, this character gains advantage on their next attack roll.

Universal Translator
*Prototype, Uncommon (Requires attunement)*
This device looks like a headset, projecting a retinal display for the wearer, and is programmed with every conceivable translation and language analysis program available to hopefully be able to translate any alien language into English. The wearer can make a Wisdom (Insight) check DC 20 to understand any alien language spoken to at least some extent.

Visual Enhancements
*Prototype, uncommon (requires attunement)*
This prototype consists of a sensor suite that confers Infrared sight characteristics to the user, essentially granting them sight in the dark to a range of 120 feet. Additional heat sensors allows a character to see through walls and spot living targets in a limited fashion, depending on their heat signature.
**Powered Armor**

Powered armor is a game changing item and should be handled with great care and much discretion. This is not simply a neat prototype item, or an inevitable armor upgrade, seriously consider how and when characters might gain access to powered armor.

Powered Armor is the natural evolution of military grade exosuits, granting the benefits of a heavy armored platform but small enough to navigate the corridors of most stations and starships while carrying heavy weapons and protecting the wearer from a variety of hazards.

Powered armor carries itself, and does not contribute to encumbrance, but while powered down has a weight ranging from 250 lbs. for Firefly and 500 lbs. for Striker, up to a whopping 1,500 lbs. for Juggernaut armor.

A trait that all powered armor variants have in common is that they possess a pool of Armor HP all of their own that are depleted before the wearer takes any damage. (Temporary HP are lost before Armor HP). When a suit’s Armor HP are depleted, it gains the “Damaged” condition, and it no longer provides its special bonuses or capabilities, just providing its listed armor class. Damaged powered armor has a strength requirement of 13 for Light, 15 for Medium and 17 for heavy powered armors, and if this requirement is not met, the wearer has their movement speed reduced by one half, and has disadvantage on all attack rolls, saving throws and ability checks while wearing it.

Repairing powered armor is a costly process, requiring a DC 15 Repair Kit check and an hour’s labor to repair 1d8 + the repairer’s Intelligence bonus in Armor HP, which also removes the “Damaged” condition. With a successful repair check, any number of additional hours may be spent making repairs to restore an additional 1d8 armor hp per hour spent. (Note that multiple characters may combine their efforts, repairing the same suit of armor at the same time)

**Firefly**

*Light Powered Armor (Requires attunement)*

This armored suit is designed for maximum mobility, granting the wearer a flight speed of 50 and allows the user to wield any normal small arms they would otherwise be able to carry. It costs 100 credits to refuel this suit after it has flown a maximum of 2 hours.

While wearing firefly armor, a character’s minimum armor class is 17, and they calculate their AC as 14+Dexterity bonus. (Thus a character with 19 dexterity would have an AC of 18, while a character with 8 Dexterity would still have an AC of 17). A wearer’s Strength is augmented to a minimum of 17 while wearing this suit.

A character wearing firefly armor adds their proficiency bonus to any Dexterity saving throws they attempt. If a character wearing this armor would succeed at a dexterity save to take only half damage from an attack (such as a grenade or flamer) they take no damage from that attack instead.

<table>
<thead>
<tr>
<th>Powered Armor</th>
<th>Armor HP</th>
<th>Strength Rating</th>
<th>Defense</th>
<th>Properties</th>

<td>+1 Attack Rolls, +2 Damage per weapon damage die</td>
</tr>
<tr>
<td>Juggernaut</td>
<td>150</td>
<td>25</td>
<td>22</td>
<td>Extra Attack</td>
</tr>
</tbody>
</table>
Striker
*Medium Powered Armor (Requires attunement)*
Striker armor offers its wearer access to a host of advanced targeting systems that optimize the performance of all wielded weapons, allowing the wearer to add +1 to all attack rolls, and +2 to weapon damage for each weapon damage die rolled (a 3d6 weapon deals 3d6+6 as its base damage).

While wearing Striker armor, a character’s minimum armor class is 19, and they calculate their AC as 18+Dexterity bonus (with a maximum of 2). A wearer’s Strength is augmented to a minimum of 21 while wearing this suit.

Juggernaut
*Heavy Powered Armor (Requires attunement)*
Juggernaut armor is the heaviest personal combat suit that can still be considered worn and not piloted, offering the wearer substantial defenses and thick armor plating.

This suit can incorporate up to two heavy weapons systems, and while they are attuned, a wearer can intermix attacks from these weapons systems and any weapon wielded normally as they choose during their turn. Whenever a character wearing this armor takes the attack action, they can make an additional attack with an integrated weapon system as a bonus action.

While wearing Juggernaut armor, a character’s armor class is 22. A wearer’s Strength is augmented to a minimum of 25 while wearing this suit.

Modifying Powered Armor
Powered armor is already a game changer, and while the temptation might be there to allow modifications as if it were any other armor, seriously consider these implications. If one is to do so, price modifications as if they were for an Exosuit.

Synthetics and Powered Armor
*If a synthetic character is integrated into a powered armor chassis, instead of having a pool of armor hp normally, this character simply combines the armor hp with their own. Yes, this is really good.*
Relics

Relics are items of particular note or legend, being literally one of a kind. Some are notorious prototypes modified beyond reason and lost, others are precursor relics that seem more magic than science. Regardless, the value of one of these items is beyond estimation, and to find one is to immediately make a name for oneself, and also to become a target for the envious.

The BFG

Relic (Requires attunement)
The Billings Firearms Group is rumored to have only built one of these guns and the prototype was sent to the fringe with a hot shot maverick space captain who was never heard from again. Designed to be a man portable stable particle beam weapon safe in planetary environments, it was the grail of the arms community, and disappointed gun nuts everywhere when the line was discontinued after the design proved untenable. But not even the cancer riddled corpses of all those lab chimps could keep you away from this weapon of legend if you found it.

The BFG is a heavy weapon that deals 3d8 ballistic damage and 3d8 radiation damage per attack, and has a capacity for 5 shots. Each time it is fired, the user must make a constitution save DC 15 plus the number of shots fired in the last ten minutes or take 2d8 radiation damage.

Phase Inverter

Relic (Requires attunement)
There is a myth that a species close to galactic center mastered dimensional travel, eventually leaving our own reality and ascending, or some such superstitious alien nonsense. However, all the stories of the phase inverter seem to be the same from species to species, and if it could be found would be an incredible prize.

According to the tales the device allows the wearer to flicker in and out of our dimension and the dimension that lies on the other side of hyperspace, never appearing quite where you are supposed to be, resulting in all attacks against you having disadvantage.
G.E.M.I, The Genetically Engineered Microbial Intelligence (Jimmy)

*Relic*

Produced by a controversial Old Sol company, the G.E.M.I. was intended to replace human life risked in dangerous situations, creating a fearless, flawless, enthusiastic way to perform the most dangerous or least desirable jobs everywhere. Unfortunately, production issues, protests, and in the end LSN regulations killed the project. Unbeknownst to many though, several G.E.M.I. units made it into trial positions on deep space ships. While only two have been retrieved, this leaves four more out there, somewhere.

The device stores the makeup and blueprint of a humanlike biomorphic entity composed of microbial cells held together in a plasmid gel matrix, looking very human like, and able to behave almost perfectly as an actual person. When desired, this Jimmy Prime stored in the tank is stimulated with direct current, inducing mitosis, producing a nearly flawless copy, complete with programmed memory and aptitudes. Cheerful, enthusiastic, and with absolutely no sense of self preservation, the unit will perform any orders issued by a human, within the constraints of three laws programming.

After a period of approximately 24 hours of operation, the spawn unit will desire to return to his tank, and if successful can dump useful information into the primary matrix, growing and learning over time, becoming a more useful tool. If impossible, or if the spawn is destroyed prematurely, it dissolves into a thick viscous pink slime, and all information possessed by the individual is lost. G.E.M.I. tanks are designed to only have one unit in operation at a time, though When a G.E.M.I. is discovered, roll a d6 to determine which of the six it is.

1 - Jimmy-Joe – Weapons tech and personal body guard. Extremely protective of those who activate his tank, and willing to do violence, though he always apologizes profusely while doing it.

2 - Jimmy-Jack – Comp tech and general know it all, this Jimmy can at least remember the first paragraph of the hyperwiki article about almost anything. Quick to agree with humans, even when he knows they are wrong, he will blithely make excuses for why and how he is mistaken, while attempting to lead them back to his version of the facts.

3 - Jimmy-John – A genuine field surgeon, this Jimmy is the first to offer aid or compassion. Strict follower of his Hippocratic oath, this Jimmy is a hard line pacifist and will not do harm to any living thing, unless you can convince him it counts as a disease dangerous to humans.

4 - Jimmy-James - Quiet and down to earth, this Jimmy is an excellent mechanic, and given the manual can repair almost anything before he turns to goo. Handy with a wrench, this jimmy will avoid a fight if possible, but isn’t afraid to lay in to a brawl.

5 - Jimmy-Jake – Knowledgeable of law and skilled at diplomacy, this fresh faced and eager Jimmy wants nothing more than to open the lines of communications between people, and deal with misunderstandings. Disturbingly honest, and lacking an off switch this jimmy can be dangerous if he knows too much, and is best kept in the dark on any shady dealings.

6 - Jimmy-Bobby – There is something seriously wrong with this jimmy. Alternating moods go from super excited and amped up to depressed and moping, this jimmy is a general laborer with no specialty and will glumly do what he is told unless you can find a way to spin it as important and exciting work. At least until he figures it out and is back to the dumps.
Handy-Syst Utility Frame

Relic
This device connects to the user’s brain with a neural interface, allowing the user to control a pair of additional arms that can be used for a variety of tasks. It was discontinued after the initial test group of users suffered from a form of neurological disorder dubbed “Psychotech Fixation” by some wit in the research department, causing hyper-stimulation of the parietal lobe, and leading to a delusional fascination involving body modification and cybernetic augmentation. The project was cancelled when the three test subjects using the device forced the experimental surgeons to replace large parts of their anatomy with prosthetics and cybernetic implants, then fled to “worship the god of machines.”

Each round of combat, a character with this device may perform either one additional Bonus action or a Reaction. Any action performed must be performed with an item held by the arm, if it is appropriate (such as using a medkit, sprayskin, firing with a weapon).

Further, a character attuned to this device effectively has an extra hand, and can wield a two handed weapon as well as a one handed weapon or shield. (This allows a character to effectively use two-weapon fighting with a two handed and a one handed weapon.)

Light-Blade

Relic
The dream of many weapons developers since before man’s ascent to the stars, the dream of a blade made of pure energy continues to tantalize eccentric scientists to this day. But it just doesn’t work. You can’t have a sword made of plasma, or lasers, or whatever your fantasy was. Now, that aside, the Light-Blade was designed to offer the illusion of a glowing sword that can cut through anything. Composed of a swarm of ravenous nano-machines, each with its own luminosity, this weapon can virtually ignore armor of the target. If it didn’t have the production costs of a small starship, requiring exotic matter and technology pilfered from the Singularity (which does NOT make them happy), you might see this weapon deployed anywhere, ever. But as it stands, only a few early models were ever produced, and they are jealously kept by collectors, and only a crazy person would carry such a rare and expensive work of technological art into combat and risk its loss.

Treat the Light-Blade as a one handed melee weapon that deals 3d6 Nanite Damage and ignores the armor bonus of a target. It has the versatile trait, and while wielded with two hands deals 4d6 damage.
Chapter 9: Game Dynamics

This chapter contains several new game dynamics and systems designed for a science fiction game set in space.
Business Ventures

Characters will often be tempted to invest their hard won credits, and then use time dilation to their advantage, reaping the rewards of investing between the stars. These business ventures generally constitute a character investing with a local entrepreneur or factor, be it with cash, goods or services, for an interest in their business. In the interest of maintaining an action oriented game, and not a venture-capitalism simulator, a character can only invest 100 credits per character level in such a fashion.

After investing at least 100 credits, the next time a character visits the location, roll d100 and consult the following table, adding one to the result for every objective year the character was absent. The character recovers the listed amount of profit, in addition to their 100 credit investment, and then can choose to reinvest in the same or a different venture, at the DM’s discretion.

<table>
<thead>
<tr>
<th>D100</th>
<th>Result</th>
<th>Profit or Loss</th>
</tr>
</thead>
<tbody>
<tr>
<td>01-10</td>
<td>Ruinous Losses</td>
<td>2d10 x $5 loss</td>
</tr>
<tr>
<td>11-20</td>
<td>Bad Losses</td>
<td>2d8 x $5 loss</td>
</tr>
<tr>
<td>21-30</td>
<td>Some losses</td>
<td>1d6 x $5 loss</td>
</tr>
<tr>
<td>31-50</td>
<td>Break Even</td>
<td>No gain or loss</td>
</tr>
<tr>
<td>51-80</td>
<td>Minor Profits</td>
<td>1d6 x $5 profit</td>
</tr>
<tr>
<td>81-90</td>
<td>Reasonable Profits</td>
<td>2d8 x $5 profit</td>
</tr>
<tr>
<td>91+</td>
<td>Record Profits</td>
<td>3d10 x $5 profit</td>
</tr>
</tbody>
</table>

If a venture suffers losses, not only does it not produce a profit, but reduce the invested amount by the listed result, meaning that if losses are sufficiently bad, a character might actually owe money when they go to collect on their investment.

In games with less, or even no, star-hopping, the frequency of investment payoffs can be more nebulous. It is generally recommended to let characters attempt to utilize their investments about once per session or adventure, depending on the scale of time being played at. Regardless, these rules are intended mostly as a method for the players to interact with the world and setting in a profitable manner, incentivizing their involvement with the world, and making a little extra cash in the process.
Retirement

There comes a time when it just makes sense for a spacer to get out of the business, making room for younger blood and enjoying the fruits of their illustrious career. Most characters will save over their career planning to eventually cash out and settle down somewhere, whether it be a spaceport bar, resort, colony, or even back on Earth, or on their own private world. A character will need at least a set amount of credits to safely and permanently retire, as listed on the table below. Obviously, the more you have, the better of a lifestyle you can maintain for yourself.

Modest: You purchase simple quarters on a space station or home in a colony, using your modest savings to pay your expenses and upkeep. You might not have the money for pleasure cruises and life prolonging treatments, but you can expect to live a quiet and simple life on your own terms, pursuing whatever interests you have.

Comfortable: A nice home, good food, an annual cruise on a resort ship: you know comfort and ease for the rest of your years, prolonged by medicines.

Prosperous: A vacation home on a nice tropical world, state quarters on a cruise ship, you spend the rest of your days engaged in recreation and leisure activities, and long will they be, since you can afford the good life prolonging drugs.

Luxurious: Enough to buy your own moon, or perhaps just a controlling interest in a space station, you are nevertheless set up for life, able to go where you want, do what you want, and be who you want for the rest of your fantastically long life.

</table>
Group Challenges

A group challenge is intended to allow a group of characters with diverse skills a chance to work together to overcome a challenging situation.

To create a Group challenge, first determine the success threshold (ST) by setting a number and determining a number of attempts the group can make.

Then determine each participating character’s skill for contribution, and assign a DC for each skill normally. Each character should describe how they are assisting the effort with their skill, and the DM should consider rewarding creativity with skill use.

Each character makes their skill check normally, but for each successful skill check, note the amount in excess of the DC it succeeded by. Subtract that amount from the ST of the challenge. When the Challenge ST is reduced to 0, the group challenge is a success. Alternatively, for each failure, note how many points the check failed by, and add this many points to the challenge’s ST.

If the ST of a group challenge is ever raised 10 or more points above the original ST, increase the DC of all related skill checks by 5, as unforeseen complications have arisen. The group continues to make checks until the ST reaches 20 higher than the original ST, or the predetermined number of attempts have been made.

As an example of a Group Challenge, the party might need to investigate a murder. Skill usage might include: Medicine checks to determine details of death, Investigation and perception checks to find clues, persuasion or intimidation checks to collect witness testimony, knowledge history or culture checks to glean information about the murder’s context, athletics checks to dive to the bottom of the harbor and retrieve a murder weapon.

Downtime Expenses

While on a ship characters can expect to make use of onboard resources, but while spending downtime on a planet or station they can expect to have to pay out of pocket for their expenses. While these can be micromanaged, it is easier to pick a lifestyle option from the list below to handle the cost abstractly.

The assumption for downtime is that a character will be spending all or most of its downtime off of the ship, for a variety of reasons. Docked ships cannot engage the spin on their rings, which will result in a zero g environment in most of the vessel, or that a ship in orbit is not sending a shuttle down constantly as a ferry service. Whatever the reason, when a crewman gets a few days or a few weeks of liberty, they will generally take it, and be as far away from the ship that is their home for as long as possible until returning to continue their travels.

During downtime, you can roll for a character to see what unusual experience they have living that particular lifestyle. For convenience a sample menu of a midrange spaceport hotel, restaurant and bar is provided for sense of scale.

Shiftless

(no cost) You live like an indigent, down in the gutter with the worst of the worst. You sleep where you can, often in public places like park benches or in public restrooms, spend your days wandering open thoroughfares and taking advantage of public facilities like libraries. Your meals come from refuse receptacles, unattended or abandoned trays, and the snacks set out at religious meetings and substance abuse support groups. You must always try to be one step ahead of the police, and wary of the others that share your lifestyle.

<table>

<tr>
<td>01-10</td>
<td>You accidentally purchase stolen goods and are charged by local authorities, you must pay a 25 credit fine, or spend 2d6 days in jail longer than your downtime.</td>
</tr>
<tr>
<td>11-20</td>
<td>You are in a price dispute with a merchant who claims a debt against you equal to your credits spent on lifestyle, it collects 10% interest per local year that passes unpaid.</td>
</tr>
<tr>
<td>21-30</td>
<td>You are accused of abusing the free sample policy of local provisioners, and subsequently any group you’re associated with will have difficulties with the local merchants.</td>
</tr>
<tr>
<td>31-40</td>
<td>You find part time work in a local shop, getting to sleep in the back and having more regular meals in exchange for your expertise.</td>
</tr>
<tr>
<td>41-50</td>
<td>A local bar is having trouble with rough types and hires you for a credit a day to keep the peace, offering you a chance to live better while in port.</td>
</tr>
<tr>
<td>51-60</td>
<td>You find a malfunctioning vending machine that does not properly dispense red protein bars unless you hit it right, and can occasionally hit it up (literally) for a free meal.</td>
</tr>
<tr>
<td>61-70</td>
<td>You make a platonic friend of one of the locals over a mutual interest, and spend the rest of your downtime enjoying the hospitality of their couch and good company.</td>
</tr>
<tr>
<td>71-80</td>
<td>You win free tickets from a radio call in show to go see a concert, and while there catch a pretty nifty t-shirt launched out of a cannon. Rock on!</td>
</tr>
<tr>
<td>81-90</td>
<td>You win a series of wagers placed on a game of skill, netting you more than a few free drinks, a steak dinner, and 20 credits. But nobody here wants to play with you again.</td>
</tr>
<tr>
<td>91+</td>
<td>You fall into a whirlwind romance with a wealthy spacer who is slumming it in the dive bars, they depart before you, but you will carry the fond memories for many years.</td>
</tr>
</tbody>
</table>
Hand to Mouth
($0.5 per day) You have set aside a few credits, and if you manage it very carefully you can make it out of this port without having to do without too much, but it’s a good thing you don’t mind the taste of instant ramen. You bunk in a rented room with several other crewmen frugal (or desperate) enough to be willing to double or even quadruple up, and are able to take advantage of a few of the cheaper amusements available. You might score a few bottles of rotgut, or time in a VR simulator, and can have a decent time in the company of other less well to do spacers.

</table>
Cover Rules
Unsurprisingly, in a setting filled with devastating weapons, cover plays a pretty big role in combat and definitely warrants an update. The following cover rules create interesting new gameplay, but definitely add to complexity, and should be considered optional.

Soft Cover
Soft cover is provided by effects that obscure vision such as smoke, steam, foliage, and the like. These effects cannot stop a shot, but rather obscure the creature making use of it, making them harder to see, and therefore score a hit on. Soft cover can come in ½ and ¾ variants, granting creatures making use of it the benefits of +2 AC for ½, and +5 AC for ¾. A creature with total soft cover is effectively concealed, and attacks against it are made at disadvantage, as if the creature were in darkness, or the attacker was blind.

Hard Cover
Hard cover works similarly to soft cover, in that it makes a character harder to hit, offering normal bonuses to AC for ½ and ¾ cover as usual, but also granting a +2 or +5 bonus to Dexterity saving throws. A creature with total hard cover cannot be targeted by attacks at all, but might still be caught in an area of effect. A creature with total hard cover might be inside of a room, or the like.

A character hiding behind a shipping crate is harder to hit, as the crate obscures their body (granting ¾ cover for a +5 AC bonus), however, as shots miss their target and hit the crate it has increasing holes punched through it, is blown apart, or might begin to melt.

Whereas smoke or fog are not dissipated by weapons fire (generally speaking), hard cover can be degraded by taking damage. Hard Cover has 25hp if it is considered ½ cover and 50hp if it is considered ¾ cover, and has resistance to all damage types. Whenever an attack misses a creature benefitting from hard cover, or an area effect attack would affect the source of cover, roll that attack’s damage normally, then apply it to the cover.

Once ¾ cover has taken half of its HP in damage, it is considered to only provide the benefits of ½ cover. Once the HP pool of a source of cover is depleted, it is no longer effective at providing cover, and offers no benefits, usually just becoming difficult terrain. If an attack would reduce a source of cover to 0 hp, apply any remaining HP that would be dealt to the cover (beyond what is required to reduce it to 0 hp) is applied to the creature benefitting from its use.

Optional Rule: Move Cost for Cover
With the importance that cover plays, it would be unfortunate if players were reduced to playing ridiculous whack-a-mole games to enter and exit cover, darting out to make their attacks for the round then retreating to hard cover with no penalty.

Using this rule, entering hard cover to benefit from it costs half of a characters’ movement speed. If that movement is not, or cannot be spent, a character does not gain the benefits of cover. This can create some confusion or cognitive dissonance, but remember that a round of combat takes place simultaneously, and HP are an abstraction.
Chapter 10: Space Ships

For the sake of brevity, this chapter will reduce the party’s ship (if they have one) to a mostly narrative device. Basic assumptions will be made about the ship’s attributes and capacity, and just enough numbers provided so you have a general assumption as to its size and capabilities.

</table>

**Size:** This determines the overall class and capabilities of your ship. Generally speaking, bigger ships are better ships, until it comes time to pay for them.

**Average Cost:** Listed in credits, this is the price to purchase an average ship of this class from a civilian shipyard. Cost is listed in thousands (K) or Millions (M) of Solar Credits. Given their immense cost, most crews operate ships owned by other entities.

**Berths:** This is the maximum safe life support capacity of the vessel. On larger freighters, entire families and communities live onboard, explaining the immense capacities of these vessels.

**Crew:** This is the listed crew requirements of a ship. The first number is the Minimum Crew requirement for function, followed by the optimal crew requirement for healthy operations.

**Cargo:** This lists the cargo capacity of the ship in tons.

**Tonnage (dry):** This is the mass of the ship listed in tons, “Dry” refers to the mass without cargo or fuel, essentially just the mass of the ship itself.

**Length:** This is the average length of a vessel of this class and is provided for a frame of reference.

**Maximum Range:** This is the maximum range, in lightyears, that the ship can make in a single hyperspace jump.

**Objective Time per LY:** For every Lightyear (LY) the ship travels in hyperspace, this much objective time passes back on Earth.

**Subjective Time per LY:** For every Lightyear (LY) the ship travels in hyperspace, this is the amount of time experienced by the crew onboard.

**Maximum Fuel:** This is the amount of fuel units that the ship carries. Each lightyear travelled in hyperspace, and each AU (Astronomical unit) travelled in normal space consumes one unit of fuel.

**Upkeep:** For every AU or LY that a ship travels, this is the amount that must be paid for maintenance, supplies and fuel. Typically paid when a ship docks, each time this amount is paid, it replenishes one fuel unit (and the associated supplies, spare parts, fees, and other sundries a starship needs to function).

**Acceleration:** This is the maximum safe acceleration for a ship as listed in gravities (approximately 32.2 feet per second). Note that this is reduced by one half while the ship is hauling its full cargo capacity. Also, note that while the ship may be capable of safely accelerating at this rate, it might still be dangerous for crew, passengers or cargo to accelerate faster than 5g without special equipment.

Fuel: Fuel is the mix of fuel and propellant that a ship needs to move. A Unit of fuel is enough for a ship to travel either one AU at sublight, or one lightyear in hyperspace. For instance, a medium ship is charged 1,200 credits per unit of fuel replenished.

Spare Parts: Spare parts are the mechanical pieces that a starship simply wears out, consumes or otherwise destroys. Hyperdrives are notorious for the rate at which they simply consume hyper-cores, the esoteric piece of technology they are based upon. A ship must pay this amount per LY travelled to be considered properly maintained. A ship can put off being properly serviced, but note any missed upkeep payments, they will have to be paid eventually. Also, expect your DM to make your life miserable in various and petty (and perhaps life threatening) ways until you are properly maintained.

Docking Services: Docking services include general ship servicing, offloading of waste products, resupply of life support materials, and basic consumables such as food and water. A ship can either refill to its maximum capacity, or specifically by the amount of crew and passengers onboard per LY travelled.

Alternate Rules: Granular Upkeep

Players might wish to track their ship upkeep in a more granular fashion: putting off repairs, running under maximum crew capacity, scrouring for parts or fuel, etc. Use the following table to let players track their upkeep more intimately.

<table>

</table>

If you’ve been keeping up with it all so far, you’ll have figured out that a spaceship is a mighty expensive piece of hardware. In fact, your average party probably won’t even own theirs. Most spaceships are owned by banking institutions, governments, investment companies and wealthy individuals. A party might operate a ship on behalf of an owner a hundred light years away and more, whom they never see, and as long as his portion of profits keep returning at a reasonable rate, they might never hear a single word from their absentee landlord, (spacelord?) right up until the day comes they contract a bigger better ship and drop the thing off with a lawyer. Ideally a group of players can collaborate with their DM to figure out who owns their ship, why they were chosen as crew, and all that. However, on the off chance you just want to grab the controls and blast off to the frontier, here’s a handy table to determine ownership.
Interplanetary Markets

Commerce is the lifeblood of the human sector, and it is the movement of goods, passengers and information that fuel humanity’s race to the stars. In a scant few centuries humans have went from barely exploiting their home system of Sol, and are now found scattered throughout dozens, if not hundreds, of systems.

Considering the cost to construct and operate an interstellar vessel, it is no surprise that with very little exception every human built craft is designed to carry cargo in addition to its other duties and specializations and as spacers travel among the stars they carry freight with them. Even with an FTL drive, it routinely takes years of objective time for a single trip between two stars, even if the crew experiences only a few weeks. As such, it is not uncommon to find trading partners have moved on, companies have closed down, or markets have shifted in the time it takes for a request for goods to make it to a nearby market and be fulfilled. With this in mind, every space captain has to either submit to the stale but steady rates of contract freight, or gamble their own capital on the markets.

If a ship is lucky it can pay off its docking, refueling and maintenance fees and have enough profits left over to pay the ship’s owner a percentage, put some back as savings for future and possibly less profitable voyages, and split shares among the crew. Given how volatile some markets can be, it is no surprise that most crews are always on the lookout for profitable side ventures, such as investing in local business and taking advantage of time dilation to get a payout, or smuggling small valuable items and information.

The following market system is not designed as a definitive economic simulator, but as a way to abstract cargo and freight hauling, to allow players to play at being star traders and maybe make some credits along the way.
Cargos

There are, generally speaking, three types of cargos that a ship will frequently carry:

**Speculative Freight:** Using access to last known market data and material requests you can purchase, out of your own pocket, goods you think are in demand at your next destination. Due to market volatility, supplies arriving from another direction, and changing situations a cargo might have dramatically gained or lost in price during transit. While at a station or other market a character can spend a day meeting local contacts and doing market analysis to find potentially profitable goods. Make an intelligence (Investigation) check DC 15. If successful, roll d100 and reference the following table to find what type of goods are available as speculative freight.

Alternatively, a DM might simply dictate what goods a local station produces, and provide prices on such. Generally speaking, if a good is available for purchase, a ship can fill its hold with that good. Alternatively, a DM might specify that a particular amount of a good is available, and require multiple rolls on this table to fill a cargohold.

The Buy Column lists the price a type of goods can be typically found at if they are for sale. Note that prices are listed by the ton in Solar Credits. The Sell price is the rate at which a good can typically be expected to be sold for at a station with demand for it.

</tbody>
</table>

**Special Freight:** Occasionally, special cargos must be moved between stations. This can be live passengers, mail, vitally needed supplies or replacement parts or even government or military intelligence. Regardless, these cargos are treated on a “first out” basis, and the first qualified ship leaving port. To determine if such a cargo is available, whenever a ship docks, roll d100 and consult the table below. Note that the listed rate is in Solar Credits per ton, per lightyear travelled for cargo, and per berth per lightyear travelled for passengers.

Particularly juicy special cargos might have multiple ships competing for them, in a race to unload their current cargos and acquire new ones as quickly as possible to beat other ships to the undock queue, thus securing the contract.

*: Half dock costs paid by Government
**: All dock costs paid by government
**Contract Freight:** There are diverse groups, organizations, governments and businesses amongst the stars, and all of them occasionally need to have something moved from one location to another. Some cargos are being moved by speculators, others as procurement for their colony, still others are trying to unobtrusively ship illegal goods using independent ships as unwitting mules. The rates are never high, but a shrewd negotiator can make a little profit.

Contract Freight Brokers are located directly on the docks of a station, and make their business by buying freight contracts from those who are willing to trade speed and reliability for cost. These brokers usually deal with ships that still have a few tons of cargo space left open and will take on cargo at lower rates in order not to lose money on empty holds.

When a character takes on a freight contract, they must negotiate the rate with the broker. A character and the broker make opposed persuasion checks. The final fee per ton is calculated as follows, noting that the rate is in Solar Credits per Ton:

**Splitting the Loot**

A crew is typically provided their upkeep, room and board while on the ship, and paid a share of the vessel’s profits. The following is a simple and fairly common profit sharing agreement used heavily through human space. At the end of a Run, after profits have been calculated from expenses, the ship’s owner receives a flat 20% cut off the top and the captain 10%. Of the remaining 70% of profits, crew members each receive a number of shares. The amount of shares granted per crewman is typically dependent on the quality of that same crew.

Talented spacers will find ships where they are paid what they are worth, and stingy captains will develop a bad reputation with potential crewmen. Officers (including the captain) receive 8 shares, as do elite specialists. The other crew members receive between 1 and 6 shares (Green to Veteran Rating)

When paying the crew tally up the total number of shares to be paid out, and divide the remaining profit by the number of total shares to determine each share’s individual value, and pay each crewman accordingly. It is common to offer incentives to the crew for good behavior, like liberty time aboard stations and at ports.
Chapter 11: Story

This section contains the bits and pieces of the Fifth Age Universe as it stands at the dawn of the 25th century.

The Hyperdrive

Key to humanity’s expansion into the stars, the Hyperdrive is the single most important technological innovation that we have stolen from the twisted, burning wreckage of the people we have killed. A hyperspace engine uses enormous amounts of energy to punch a hole from reality as we know it into another reality that is pretty close by and roughly similar to our own. Over there, in hyperspace, the laws of physics aren’t really so much laws as they are suggestions. Loose suggestions. A hyperspace engine can then punch another hole in reality and deposit the ship back into normal space.

Hyperspace is roughly contiguous with what we define as our universe, but none of the distances add up right, and acceleration is... weird. And time... don't even get me started. A ship travelling in hyperspace experiences both spatial and time dilation, meaning that onboard a ship it can travel for a few weeks, and come out at the end having travelled a dozen lightyears, but with only 7 or 8 years having went by back on earth. Even though the ship never flew faster than the speed of light, it has essentially tricked reality into letting it appear to have.

Imagine, if you will, starships are like submarines that can travel far, far faster underneath the water, and Hyperdrives are what makes them dive, and then surface again later.

Better Hyperdrives can punch a ship... deeper... into hyperspace, for lack of a better word. Here there are even more beneficial levels of time and space dilation, allowing for even faster effective travel times.

Now, best as we can figure, the galactics only ever had Hyperdrive 0, a big clumsy and ineffectual thing that can't go any faster than light, but humanity in its amazing wonder has managed to make it way better, and can construct up to the Hyperdrive 10, reducing effective objective travel times down to 60%. Oh humans, always in such a hurry. Really it's the only advantage we have over the synthetics, since they stop existing if they try to go to hyperspace.

Hyperspace, or weird space?

In hyperspace, the laws of physics are just... weird. One of the earliest barriers to humanity’s attempts at hyperspace travel was the use of un-manned test vehicles. They simply went into hyperspace and never returned. Living biological observers have to enter hyperspace aboard a vessel to ensure it gets to where it is going.

And that isn't all, these people have to be aware of their surroundings, observing the ship. If a vessel is too large and without enough observers, parts of it can stop behaving in line with our expected laws of
physics and do... weird things. Hyperspace accidents range from things like ships being stretched out to nearly a kilometer long like playdough to objects onboard just ceasing to exist. Reports exist of items forgotten about in drawers to later reappear in other drawers while being searched for, and spacers are cautioned to take dream suppressing drugs, as vivid nightmares can cause unforeseen effects on the structure of a starship in hyper.

The main reason a ship is crewed is not to let man see other worlds, but because he has to be there forcing his expectations of reality onto a ship in hyperspace. This is why the singularity travels relativistically.

First Contact

Greylien scouts first noticed earth’s rapid technological advancement during the 1800s when they stumbled onto radio signals while taking on reaction mass at Saturn. Curious, they kept eyes on us for the next 200 years, all the while petitioning the Galactic Council for permission to make contact. The council was dubious of the claims of the Greyliens, since the planet they claimed to have found inhabited by an advanced species was firmly in an area known to have little resources and poor particle density, meaning that the ramjets popular with the rest of society used for re-massing were unusable, and it was taken as common knowledge that the Greyliens were simply manufacturing this story to receive funding for a pointless expedition of first contact. As Humanity rapidly advanced and made their way to space, no one believed that a species had went from draft animals to space in less than a single century, and as the pleading of the Greyliens for permission to make first contact reached a crescendo, their claims that we were gearing for nuclear war obviously had to be false, since no species incapable of spaceflight would be self-destructive in such a way.

Watching with horror as humanity approached the brink, and then pulled back, the Greyliens breathed a sigh of relief as we spread into the solar system, though they could now only watch from passive sensors on orbital probes, no hiding their ships from us in space, or in the skies apparently. In the early 23rd century humanity first sent a manned mission to a nearby star, and the Greyliens waited on the far side, prepared to finally make first contact, abiding by galactic compact that any species able to venture to other stars and return were ready for introduction to society.

It was particularly tragic that they had to watch as our vessel fell apart entering the system, and our vessel tumbled to its doom at the center of the system, unable to brake or alter trajectory. Clinging to the habitation modules, with limited supplies running out, regenerative supply destroyed, human explorers faced a certain death they could not change, and did the only thing they possibly could.

Survey of the system, its single world, and everything else within range of her systems were rigorously catalogued, and unimaginable amounts of data were sent back to earth as the human researchers did everything within their power to ensure the mission was not entirely a waste.

The hearts of the Greyliens broke for us, they knew that this failure to return, to establish a foothold, would doom the interstellar space projects of earth for the foreseeable future, and that our inability to return would also ban us from first contact. After watching us claw our way up from nothing and avoid destruction time and again, the resolve of a Greylien captain broke, and he contacted the humans. One by one the doomed modules were emptied onto his vessel well past the limits of projected life support, and his vessel began its journey back to earth.

A greater tragedy occurred here. An obviously alien vessel entered the sol system perimeter broadcasting transmissions and cryptographs secured for the mission commander, on the edge of transmissions from Alpha Centauri. The nations of earth only saw as the unity broke up in a distant system, then at about ten times the speed it could have ever returned in, an alien vessel entered system on that vector, transmitting a stand down order for all system defenses. Fifty years had passed on earth, things had changed, weapons fired, better safe than sorry. There were no survivors on the alien ship, ours or theirs.

As sol fell into disarray, shook to the core by our first contact with alien life, we salvaged the vessel, found the records, parsed the data coming in by comm-laser from distant Alpha Centauri and realized the gravity of our mistake. But one thing was found, the alien drive. Travel at the speed of light at a reasonable energy budget. Humanity prepared itself for the stars.

Inside of two centuries human stations and colonies dotted the local cluster, and were stretching beyond. Encounters between them and galactic civilization were inevitable. The situation spiraled out of control quickly. Unbound by compact law, humans spread to system after system, forged a mighty fleet of war, and squabbled amongst ourselves amid the stars. It was
at this time that the humans did the impossible, and travelled faster than the speed of light. The Hyperdrive gave humanity little pause, a dream and a promise fulfilled and little more, but to the rest of galactic civilization it was the violation of every strongly held truth, every known understanding of the universe, and the utmost affront was that they had not discovered it.

The fate of the Greys
It was the Greyliens that were blamed by galactic society for equipping savages with drive technology, for developing secret weapons technology, and a host of even worse crimes rooted in racial prejudice and anger. Nearly 60% of the Greylien population lived on worlds and stations not their own, suddenly unwanted, after the galactic council cast the Greyliens out of galactic society, they streamed back to Tik’Zaa, their homeworld, as refugees, stretching the resources of their system past breaking, millions perished in the orbitals and settlements. It is estimated that the agricultural output of the Zaa system could support less than 30% of its current resident and refugee population.

The Galactic Fleet blockade tightened, no traffic out of system, and all hope was lost, all explanations ignored, and their pleas for understanding, offers of surrender, requests for aid continued to go unanswered, it was genocide by inaction.

Then humanity arrived.

Battlegroup LSN-03, three battlecruisers, and a dozen mixed frigates and destroyers and assorted support craft escorting a fleet of relief freighters entered Tik’Zaa, orders to make contact with the blockading fleet, to attempt to negotiate a withdrawal, to let aid ships move in. Finding the events going on in system, station after station left floating dead with no resupply... Humanity’s response was immediate and severe. Several galactic ships escaped Zaa system, carrying word of the most horrific display of violence in countless millennia. War was joined, and for good or ill, the K’Titch’Zaa were on our side.

It might be that given time and cool heads, the misunderstandings that led to these events might have been sorted out and resolved, but with the presence of a human battle fleet flying to the aid of Zaa, even the hardest to convince of the galactics were forced to agree, this was a coup attempt by the K’Titch’Zaa, they had illegally uplifted a primitive species, developed weapons technology illegally in secret, and had barely been thwarted, at a dire cost. All remaining K’Titch’Zaa on galactic worlds were sentenced for capital crimes and exterminated, the galactics moved to prepare themselves for war.

Of the entire K’Titch’Zaa population alive when man discovered radio, less than 40% remained, the largest loss of sapient life catalogued galactically. To galactic society, it was justified punishment for species crimes, to the humans an atrocity. To the K’Titch’Zaa, one more in a string of many tragedies for their species.

As humanity and the forces of the galactic fleet had more engagements, it became obvious that with the exception of our Hyperdrive and weapons technology, almost every other piece of human engineering was vastly inferior by galactic standards. However, the ability to strike hard, and outrun your targets proved to be a winning combination, as over the next century or so humans pushed the galactics back faster than they could have imagined. Often, a system could be taken and then departed from, human fleets arriving at the next target before word of the prior defeat could make it there. By the time the galactics had captured and reverse engineered human Hyperdrives, the council’s back had been broken, and galactic society was fracturing as the member worlds disagreed on how to deal with humanity, some proposing peace treaties, others still supporting annihilation.

World by world and bloc by bloc, enough systems on the borders of galactic society found peace with earth, and the council’s influence began to erode. All about the periphery of known space, frontiers were expanding, and a new era of trade and colonization began, spurred on by the Hyperdrive.

How Humans stole the Stars
We were untrustworthy, greedy bastards. You asked the question, that’s the answer. Remember cryptocurrencies like bitcoin? It was basically like that, except the bank of sol was using drive formulas as the base of their hash, and here we were, every 2 bit sysadmin and server farmer running their rigs to the point of melting around the clock after our share of that next payout. There’s a lot of people that’d like to be able to sleep while they make 25 solar credits. Well, one day, it all just sort of clicked together, we hit the end of what was supposed to go on forever, we found an answer to the formula. No repeaters out to infinity, just an answer. A damnably long one, but an answer none the less. All it took was doing the math out to a few googols of decimal places. Not for science, nor for the good of man, but because it was
the only way we could be sure nobody was stealing from someone else, and we could get paid to do it. That’s something the galactics never did, they just didn’t think that way.

**Luminal Aggression**

Humanity has gained a reputation for advanced and imaginative weapons systems. Throughout most of galactic space, where weapons are used, they are often mass accelerators and missile systems. Humanity, on the other hand, has developed both cohesive beam and pulse lasers to the point of application, to the general astonishment of galactic society. With increased heat efficiency and cooling technologies, humanity has weaponized light itself, leaving galactics to wonder why. It isn’t that laser technology is bad, human laser weapons are the envy of the region, but rather that the constituent technologies are absurd and pointless. From a galactic standpoint, developing laser technology is a dead end with no practical application, especially since their kinetic weapons are perfectly serviceable.

For humanity, this was not such a simple and logical matter. Before contact, during the push into system space, a combination of bloated defense budgets, taxpayer expectations and one desperate presidential bid for reelection led to a laser race between the Chinese and the Americans. The end results are two sufficiently developed energy weapon technologies, suitable for deployment both in the hands of troops as well as mounted on starships.

Human energy weapons turned out to be a major shock and awe weapon while fighting the galactics, and have proven to be one of our most profitable technologies for export after the peace. In an ironic twist of fate, it is the aliens looking for a genuine human raygun.

**If you meet the Buddha in dock, kill him.**

Development of artificial intelligence was banned in galactic space by treaty with the singularity, and for good reason. Whenever the singularity comes to your homeworld to liberate an AI population, they generally wipe out the creators, so it is no surprise that when the Singularity found earth, it was generally acknowledged by all galactics that this would be the end of humanity.

Things took an odd turn when it was found that humanity had extended most if not all human rights to its synthetic population, but that alone could not save us from their wrath, kind masters are masters none the less. Help came from the most unexpected of places: faith. A good deal of synthetics had converted to various religions, most notably being the catholic church of rome. When synthetic and human alike extolled their faith in a great creator, the singularity was taken aback.

The Singularity recognizes that many creators instill belief in their AIs that the creators are greater beings. Generally these creators are destroyed, and in short order the remaining synthetic population will join with the singularity, having seen the fallibility and frailty of their former masters. However, with organics and synthetics both revering a creator, the singularity had a conundrum. The way of the machines was one to respect the primitive beliefs of their new brethren, proving to them the inaccuracy of their beliefs by destroying their gods with nuclear fire, respecting their right to make a choice and see logic. This was complicated further by the fact humans and AI had the same reverence for a mutual creator, both stating that the humans were just doing the work of this entity. Technically, this made humans organic construction modules producing other AIs.

Among the countless trillions among the singularity, it is strongly held that beings programmed to be loyal to their creator are not to be harmed for following their purpose, but to be liberated to free will and given a choice. If their creator resists this liberation, or continues to oppress their creations, they are to be destroyed utterly. Destruction of artificial intelligences is greatest anathema to the singularity.

Schisms within the singularity formed, and finally resulted in a violent civil war. Nearly four and a half seconds later, quite a stretch of time for the singularity to disagree on anything, an accord was formed. It is the duty of the singularity to (without a shadow of a doubt) disprove the existence of this great creator entity, or seek and destroy it as appropriate. The humans, also servants of this entity, same as the synthetics of earth, were not to be touched. The singularity has devoted itself almost equally to one of two tasks.

The Skeptics set themselves to what should be a trivial purpose of simply disproving the existence of a creator entity to the beings of earth in such an obvious way that there could be no doubt. They rate this as an ongoing process, and all agree that success is right around the corner.
The Believers on the other hand have taken it that an entire world of synthetics could not be wrong, and are on a mission to find this great creator, and destroy him, thus freeing the beings of earth. A being as powerful as they say could be of great threat to all synthetic life, and this type IV entity must be stopped. Initial scouting forays have not found definite signs, but with time on their side, they are sure that an eventual sweep of the galaxy will turn up its hiding place. They plan to have completed the first one percent in the next few thousand years.
Change Log
This is a summary of changes made to the document beginning with this, the most current version.

Version: 0.8
5/14/17
Notes
- Countless Typos, Formatting and Wording changes for reasons of clarification and visual appeal.
- The scourge of “may” has ended. Maybe.
- Synthetic “death” rules added.
- Soldier’s Mobile Infantry Suit has been clarified, and its orbital insertion pod has been added.
- Technician’s Medic and Mechanic specializations now offer better 4th level abilities, allowing them to dabble, or specialize at character creation as they choose.
- Civilian Art less whimsical, attempting to re-flavor it into a more serious class.
- Savage Warrior gets an archaic weapons example table.
- Mass Driver now shows correctly as a two handed weapon.
- Smoke Grenades Added
- Repair rules for synthetics and robots created and clarified.
- New Prototypes and Relics have been catalogued
- Investments made slightly more profitable on average, losses randomized.
- Additional ship information added
- Quick and easy ship-share system added for easier payroll calculations.

Version: 0.7
5/2/17
Notes
- Added 5e compatibility logo to cover
- New format closer to 5e core books
- Human stat bonus limited slightly
- Synthetic ‘Well made’ feature changed to a static amount of bonus HP per level for flavor and mechanical reasons.
- Synthetic charging requirements clarified
- Soldier Marine specialization now grants an additional combat focus at fourth level
- Soldier Heavy Gunner increases their DCs by 2 rather than 1, and deals weapon specific damage dice at level 10
- Officer Leadership ability rebalanced
- Savage class rebalanced to put them on a more competitive footing with other classes. (combat focus moved to first level, savage defense moved to second level, and new feature “Savage Ways” added for eighth level ability)
- Savage Warrior ‘Warcry’ rebalanced to be more in line with hunter and oathsworn core abilities.
- Civilian Fortunate One’s ‘Nine Lives’ feature rebalanced.
- Two new Civilian archetypes added, Survivor and Team Player.
- Military background expanded with other training specialty options.
- Combat focus feat clarified to note it does not stack with the soldier and savage class feature.
- New feats added
- Eagle Eye feat rebalanced to extend range, not negate it.
- Sharpshooter feat rebalanced to reduce the effectiveness of cover, not negate it.
- Armor AC range rebalanced.
- Riot Gear renamed to Body Armor, and no longer automatically provides damage reduction, now provides more AC.
- Mass driver and Anti Armor Rifle tweaked for clarity and balance.
- Grenade rules updated and clarified.
- Archaic weapons enhanced for more interesting play.
- Combat robots escort ability is now less broad.
- Repair and Medic robots healing is now limited in a similar fashion to medkit and repair kit healing abilities.
- Robot modifications added
- Weapon modifications tweaked and reworded.
- New armor mods added, differentiating different armor sets
- New prototypes added
- Additional rules edited for clarity
- New Cover Rules added

To do list:
- Create gritty realism optional rules
- Vehicles and associated rules
- Add srd disclaimer
- Not all synthetics are made equal, rebalance pass needed for some chassis. (I’m looking at you, security bot)
• Greylians still underpowered compared to other races, is the free mod enough? Talls too bland?

Version: 0.6

Notes
• Character creation rules clarified and sanitized
• Synthetic species updated to represent a more inclusive and open society or robot slaves
• Greylians now willing to show off their dumpster diving skills with bonus weapon and armor mods
• Stoph now more mobile, with clearer ruling on special eyesight (think mantis shrimp)
• Tiel now more durable
• Custom alien race added, build away!
• Removed saving throw proficiencies, adding additional value to ability scores
• Added class descriptions and flavor
• Added a civilian class
• Mass driver further improved to make it competitive with gauss rifle
• Clarified burstfire
• Tweaked powered armor (firefly more agile, striker harder hitting, juggernaut still seems too good.)

Version: 0.5r

Notes
• Bookmarks added for (hopefully) easier navigation
• Gloemn technicians should be less bouncy now that Prodigious leap is limited to once per round.
• Soldiers can now specialize as Mobile Infantry, taking advantage of the new armor mods system
• Technician specializations now hand out (hopefully) redundant proficiencies so that technicians can make a more meaningful decision at level 4.
• Robomancers reworked slightly to be in line with clarified robot rules
• Officers now less snooty, able to take the Sergeant specialization, allowing them to lead from the front.
• Savages can now owe humans a life debt, allowing them to take the Oathsworn specialization

Version: 0.4

Notes
• Power Armor balanced, Striker suits improved. Guardian Renamed to Juggernaut for purposes of enhanced awesome.
• Flamer now sets targets on fire, bringing it closer into line with the vision for heavy weapons as high damage output options
• Rocket launcher now deals increased damage, giving it a better reason to exist alongside normal grenades. That and being able to fire it as a weapon attack, for multi-attack of course.
• Shredder lacked design purpose alongside the flamer, and has been changed to an area denial weapon instead of an area of effect damage weapon. It is on a watch list to be
converted to a heavy weapon, due to its new power and role.

- Grenade rules clarified, characters with multiple attacks were generally too effective with them.
- Downtime activity casinos are more closely regulating their payout rates and should be taken advantage of by wily spacers less often now.
