This book is dedicated to
the authors by the authors,
Steve “Starfire” Peterson
and George “The Golden
Swordsman” Mac Donald

Begin Transmission: "UNTIL command, UNTIL
command, this is Agent Zed reporting. I’ve
penetrated Dr. Destroyer’s island base. It’s
incredible. He’s got missiles, guns, hovercraft —
there must be two hundred mercenaries here
armed with automatic weapons. There’s
supervillains on the island, too. I’ve seen at least
three. Those stolen rocket parts I traced — he’s
built an enormous nuclear rocket, and he’s
planning to launch any time. The hypno-ray
satellite he’s got in it will enable him to rule the
world! We’ve got to stop him! Send in a full
assault team. The entrance is — wait a minute,
I hear a noise." Static. End Transmission.

The Island of Dr. Destroyer is an adventure
designed for use with Champions. The
adventure may be used for up to six superheroes at
a time. The adventure consists of full maps of
the island, and thorough descriptions of the
defenses of the island. Included is the supervil-
lain Dr. Destroyer and recommendations for the
choice of his assistant villains. Also in this
volume are suggestions on altering the adven-
ture to fit your personal taste.

The players should read no further than this paragraph;
it is best, in fact, if the game-master only reads them the
“transmission” paragraph above. If they read further, they
will discover information about the island which would make
the adventure much easier and thus less fun.

HOW THE HEROES GET INVOLVED

Most appropriate to a comic-book campaign would be if the superheroes found out about the Dr. Destroyer situation on their own — such as by being the only ones to intercept Zed’s message and trace it back to the island in the South Pacific, or by stumbling across a warehouse filled with munitions and discovering from their records the existence and defenses of the island, etc. An experienced game-master will have no problem figuring out how to inject them in the adventure.

For the inexperienced GM, here’s a far easier method: The heroes are contacted by UNTIL, who can’t handle the situation on its own (yes, the super-agent group knows its limitations). If the heroes already constitute a hero-team, then it’s very easy. If not, UNTIL will contact the heroes individually. In either case, they’ll be brought to the regional HQ of UNTIL, be introduced to Major Martinez himself, and be briefed on the situation.

THE BRIEFING

“All right, listen up,” Martinez will say. “I only got time to say this once. My name is Major Martinez. We got you here to help us out.” A slide of the island appears on the wall (the GM will either have to describe the island or do up a rough map of the island as described later). “On this island, the international criminal known as Dr. Destroyer is about to launch a satellite that could control every human being on this planet.”

“His island is a fortress, armed with surface-to-air missiles, antiaircraft gun emplacements and armored hovercraft. Dr. Destroyer has a private army of hundreds of mercenaries, plus several superpowered criminals. A full UNTIL assault force is steaming toward the island, located in the South Pacific, but sending my boys into that place would be like marching them into a meatgrinder. We need you superheroes for this little vacation; my boys can’t stop that launch.”

“The launch complex is located underground somewhere on the island. We know that there is an entrance through Dr. Destroyer’s villa. There might be more.

“The rocket itself is nuclear powered, and you damn well better not blow it up, because you’ll vaporize the island and contaminate international waters besides vaporizing yourselves.

“Your objective, then, is to penetrate the launch complex and destroy the satellite before Dr. Destroyer can use his Hypno-ray to destroy the free will of every person on Earth.

“We will provide you with a hypersonic transport aircraft to the area near the island. From then on, you’re on your own. Good luck.”

WHAT UNTIL CAN SUPPLY

UNTIL will not volunteer to provide the characters with any gear, but, if the heroes are beginners and the UNTIL liaison is pressed, they will provide some equipment out of their stock. They can provide:

1. A rubber raft with an outboard motor.
2. A parachute for each hero.
3. Climbing gear for each hero (acts as +3 to the Climbing skill, OAF claws and suction cups).
4. A radio for each hero (Radio Hearing, OAF)
5. One medikit (provides standard bonuses to characters with Paramedic skill).
6. A flashlight for each character.
7. Maps of the Island (the crude map that the GM can draw).
8. A bulletproof vest for each character (+6 PD and ED, 11 – activation). (The heroes will have to press them for such a concession; after all, superheroes are supposed to have all their own combat equipment.)
9. A blaster carbine for each character (5D6 EB, 20 shots, select fire). (Asking for or demanding this will raise some brows among the UNTIL boys, too — what are honest superheroes doing asking for standard UNTIL hardware?)

As you can well imagine, these last two items should only be provided if you feel that the heroes are a bit underpowered for this adventure.
THE ISLAND OF
DR. DESTROYER
(Strat Map)

See page 7 for map key.
THE MAP

On page 3 is the GM’s map of the Island of Dr. Destroyer. Note that this map is laid out in Strat Hexes — that is, strategic hexes constituting 50 meters across (25" in the normal tactical Champions scale). A later section of this rulebook details the meaning of the different map elements.

THE ISLAND’S DEFENSES

The Island of Dr. Destroyer is covered by myriad automatic and manned sensors and weapons. The island also contains over 200 troops and eight supervillains to ward off intruders. The final defense of the island includes the supremely powerful Dr. Destroyer himself. The defenses are presented here in the order that the players will probably encounter them. First, radar and ground-sensing devices will be detailed. Second, the mercenary soldiers and their equipment will be listed. Next, recommendations for the eight supervillains will be given. Finally, Dr. Destroyer will be described. The actual combat statistics of the troops and Dr. Destroyer is given at the end of the adventure.

RADAR

The island’s first defense against assault consists of heavy Surface-to-Air Missiles (SAMs) for shooting down flying targets. These missiles are guided by radar. Each missile launch site (see map) has its own radar.

The base chance to spot a man-sized target is 18 — on 3D6. Targets must either be carrying some metal, have a Force Field up, or have 20 or more points of Density Increase to be spotted by radar at this roll. All other characters are spotted at -3. Radar has a Rang!=) Modifier of -1 per 2 Strat Hexes. Normal airplanes have a modifier of +5 to spotting due to size. Large airplanes (like the UNTIL hypersonic transport) can have up to a +7 due to size.

Radar has a minimum altitude at which it can track targets. Any target that is below the radar’s Minimum Sighting Altitude can not be seen. It is flying in the “grass.” The Minimum Sighting Altitude for radar is given in the chart below:

<table>
<thead>
<tr>
<th>Terrain</th>
<th>Range to Target in Strat Hexes</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sighted Over</td>
<td>1</td>
</tr>
<tr>
<td>Clear or Water</td>
<td>1”</td>
</tr>
<tr>
<td>Mountain</td>
<td>2”</td>
</tr>
<tr>
<td>Forest</td>
<td>3”</td>
</tr>
</tbody>
</table>

The SAMs are the same as those listed in Champions. They fly 550” or 22 Strat Hexes a segment. They take no range modifiers against any target spotted for them on radar. They do 4D6 Killing Explosions when they hit. The gunners for the missiles are considered OCV of 5 and speed 3. Each missile site has eight missiles.

THE ISLAND’S SENSORS

The island’s second defense consists of large numbers of hidden sensors. The edge of the island is ringed with sensors, as are points of special interest (see map). Each sensor mark consists of a combination TV, Ultraviolet, and an Ultrasound Motion Sensor. Each sensor may be fooled by a combination of powers, skills, and player strategy. The sensor types are listed below, along with the powers or actions that will circumvent them.

<table>
<thead>
<tr>
<th>Sensor</th>
<th>Action to Negate Sensor</th>
</tr>
</thead>
<tbody>
<tr>
<td>TV</td>
<td>Invisibility</td>
</tr>
<tr>
<td></td>
<td>Darkness</td>
</tr>
<tr>
<td>Ultraviolet</td>
<td>Invisibility to Ultraviolet</td>
</tr>
<tr>
<td></td>
<td>Darkness that includes UV*</td>
</tr>
<tr>
<td>Ultrasound</td>
<td>Place Force Wall around sensor*</td>
</tr>
<tr>
<td>Motion</td>
<td>Move a maximum of 1” per full turn</td>
</tr>
<tr>
<td>Detector</td>
<td>Have 3+ levels in Shrinking</td>
</tr>
<tr>
<td></td>
<td>Be Desolid</td>
</tr>
</tbody>
</table>

* This causes the sensor to report a malfunction

Chance for computer to spot target:

13 – on 3d6
-2 if only one sensor is operational
-2 per clear Strat Hex away from sensor
-4 per mountain or Forest Strat hex away
-2 if target is partially concealed
-5 if target made Stealth Roll and only TV or UV sensor is operative

The maximum range of the sensor system is three Strat Hexes. The computer evaluates data from the best possible sources each turn, so it will only make one spotting roll per character. The computer will attempt to spot a character each time he moves.
THE COMPUTER'S REACTIONS

The Defensive Computer that runs most of the defenses on the island has several possible reactions to signals of intruders. The computer analyzes each threat by the total number of "events" it causes. Any time there is a malfunction, sighting, or problem in the complex, the computer registers an Event. The possible events are listed below:

<table>
<thead>
<tr>
<th>Possible Situations</th>
<th># Events Logged</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sighting of 1 person</td>
<td>1</td>
</tr>
<tr>
<td>Sighting of 2-5 people</td>
<td>2</td>
</tr>
<tr>
<td>Sighting of 6+ people</td>
<td>3</td>
</tr>
<tr>
<td>Sighting of 1 vehicle (flying characters count as vehicles)</td>
<td>2</td>
</tr>
<tr>
<td>Sighting of 2+ vehicles</td>
<td>4</td>
</tr>
<tr>
<td>Sensor Destruction</td>
<td>2</td>
</tr>
<tr>
<td>Patrol that does not report in on time</td>
<td>1</td>
</tr>
<tr>
<td>Weapons point that does not respond to call</td>
<td>1</td>
</tr>
</tbody>
</table>

Computer's Reaction:
- 1 Event: Alerts next foot patrol to check out Event.
- 2 Events: Sends foot patrol to investigate immediately.
- 3-4 Events: Sends Complex to possible intruders and sends scout vehicles and foot patrol.
- 5-6 Events: Sends Intruder Alert, sends supervillain patrol to investigate Event, and scrambles all squads to vehicles.
- 7+ Events: Sends Red Alert, seals all underground bulkhead doors, positions guards at all important doors, positions Supervillains at Missile Launch Site and Aircraft Hangar, activates automatic interior defenses.

The Security Officer in the Missile Launch Site can examine the computer's sensors at any time and override the computer's decision. Dr. Destroyer also has full control of the computer and autodefenses from his console at the Launch Site.

THE TROOPS

Dr. Destroyer has hired 200 mercenary troops to help guard his island fortress. These troops are all SPD 3, CV 4, and have +1 Level with all rifles. The exact characteristics for the average trooper are listed at the back of this book.

Each trooper is equipped with a 7D6 Blaster Rifle, with selective fire and a 20-second clip. Each trooper carries two extra clips. Each trooper also carries a 1/3D6 knife (which does 1D6+1 HKA with their STR additions), a lightly armored bulletproof vest, a flashlight and a radio.

Hidden in each trooper’s belt buckle is a special Ultrasonic Response Transmitter. This small gadget allows the troopers to be identified by the island’s computer. The transmitter works by listening for the signal sent out by the Ultrasonic Motion Sensor. When the transmitter identifies the signal, it sends a coded ultrasonic response that identifies the guard to the computer. The computer keeps a general record of the position of all the guards on the island in this manner. If any guard (or character who happens to steal a belt) is found to be far from his normal position, the computer will attempt to call that guard on the radio. If the guard does not give a proper response the computer will act as if two Events have taken place.

The troopers are organized into five-man fire teams. Squads have two fire teams. Platoons consist of three Squads and two leaders. Companies consist of three Platoons and four leaders. No formal organization above company level exists. All company commanders report directly to the Defensive Operations Computer and Dr. Destroyer.

THE VEHICLES

Dr. Destroyer keeps five different kinds of vehicles on his island. For pleasure travel the Doctor has a 60-foot yacht. For movement inside the underground complex, there are two "golf carts." For general scouting duty, the three squads of troopers are equipped with lightly armored hovercraft. For emergency escape duties there is a small supersonic transport aircraft. For heavy scouting or attack work the island is protected by an attack helicopter.

Actual (abbreviated) stats on the vehicles are given in the chart below. For those of you who don’t have Champions II, here are the meanings of the vehicle stats:

PASS: How many passengers and crew the vehicle can normally hold.
MAX: The maximum speed — in inches per segment — the vehicle can move. Vehicles move every segment, not every active phase of the pilot.
ACC: Acceleration — how fast the vehicle can accelerate. If it has an ACC of 3, it can start out at 3”/segment, accelerate to 6” the next segment, 9” the next segment, and so on until it reaches its MAX.
DCC: Deceleration — how fast the vehicle slows down. If it has a DCC of 3, and is moving at 24”, it can slow down to 21” the first segment, 18” the second, and so on.
TURN: How tight a turn the vehicle can manage. Take the vehicle’s current speed in inches per segment (for instance, 15”) and divide by its TURN (for example, 3) to find out how many segments between turns the vehicle must take (in this instance, 5). Each turn may not exceed 60° — one hex-facing.
DEF: Defenses. Armor.
BODY: BODY, as usual — except that a vehicle, when it takes its BODY score, is not "dying." It is wrecked and may not operate any longer.
DCV: Defensive Combat Value Modifier. In general, a vehicle has the DCV of its pilot — minus the vehicle’s DCVM. If the pilot has a DCV of 5 and the vehicle a DCVM of -7, the vehicle’s normal DCV is -2.
DMG: How much normal damage — plus the velocity/3 — the vehicle does when it rams something.
Weapons: What weapons systems the vehicle carries.

On the next page are the Champions II-style stats for the vehicles. Space constraints keep us from presenting full sheets on the vehicles.

The hovercraft carry 11 troops, a gunner, and a driver. The attack helicopter has an exceptionally experienced crew — stats for normal guards, except SPD 4, DEX 17.
THE SUPERVILLAINS

Dr. Destroyer's heaviest firepower is concentrated in the eight supervillains that he has hired to help guard his island. All of the sensors, troops, missiles, and vehicles are simply designed to keep the invaders busy. Once the invaders are engaged, the supervillains can swoop in and destroy them.

Each of the supervillains is a proud individual, so the Doctor keeps them separated into small groups of 1-3 to discourage argument. The supervillain groups are normally engaged in patrolling, guarding the Doctor, practicing their skills, or relaxing by the beach near the docks or in the fields by the villa.

If you don't have Enemies, use villains from the basic Champions set: Armadillo, Dragonfly, Green Dragon, Howler, Icicle, Pulsar, Shrinker, and Brick (from VPER'S Nest).

If you have Enemies, the group becomes Armadillo (from Champions), Panda, Raccoon, Lazer, Hideous, Vibron, Sledge, and Wyvern. (This is the proper crew defending the island.)

WHERE EVERYONE IS

There are four different wandering encounters that the players may have to contend with. Trooper patrols, scouting vehicles, supervillain patrols, and Dr. Destroyer may all be in any of several places.

TROOPER PATROLS: Patrols of one squad (ten men) walk the island continuously to watch out for intruders. These patrols contact the Defensive Operations Computer by radio and report back at five-minute intervals. Between one to three patrols will be out at any one time. Once the players have penetrated the island, roll 1D6 on the chart below to find out how far away the patrols are:

<table>
<thead>
<tr>
<th>DEF BODY DCVM DMG</th>
<th>Weapons</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 15 -10 +8d6</td>
<td>1-3 Supers, 4 Guards</td>
</tr>
<tr>
<td>2 4 -2 +2d6</td>
<td>None</td>
</tr>
<tr>
<td>8 8 -4 +4d6</td>
<td>10d6 EB selective fire</td>
</tr>
<tr>
<td>4 10 -5 +6d6</td>
<td>None</td>
</tr>
<tr>
<td>6 4 -3 +4d6</td>
<td>8d6 EB EX autofire</td>
</tr>
</tbody>
</table>

1d6 Roll

<table>
<thead>
<tr>
<th>Distance (in Strat Hexes)</th>
<th>1</th>
<th>2</th>
<th>3</th>
<th>4</th>
<th>5</th>
<th>6</th>
</tr>
</thead>
</table>

SCOUTING VEHICLES: One scouting vehicle is kept on patrol at all times. The vehicle can be either a hovercraft (1-4 on 1D6) or the attack helicopter (5-6 on the 1D6 roll). The numbers 1-6 are shown on the island map; roll 1D6 against those numbers to determine whichhex the vehicle is in.

SUPERVILLAIN PATROLS: Normally, the supervillains do not have to lower themselves to patrolling. But as the launch nears, a patrol of 1-3 supervillains may be outside. Use the procedure outlined for finding where trooper patrols are to locate the supervillains.

DR. DESTROYER: Dr. Destroyer will probably be in the Launch Control Complex if the heroes invade very soon before launch time. If the heroes get to the island some time before launch (GM's choice), there are several places the Doctor might be (roll 1D6):

1 The Villa
2 The Yacht
3 Outside the Silo
4 Inside his Laboratory
5 With one of the Supervillain Patrols
6 In the Launch Control complex

DEFENSIVE WEAPONRY

QUAD AUTOBLASTERS: These heavy blasters are mounted in turrets around the island. Each is manned by a gunner who is SPD 3 and OCV 5. The guns themselves are Autofire only, +6 to Hit, and -2 to hit per Strat Hex (or -1/12") when Autofiring. They do 10D6 per hit. These guns are tied directly to the island's own nuclear power plant, so they may fire as often as their gunners like. Each turret is armored in the front, and is DEF 8 and BODY 6. As these guns were originally designed for anti-aircraft work, they may be tied into any radar sensors on the island and shoot at any target spotted by the radar that is within the gun's line of sight.

SINGLE AUTOBLASTERS: All four of the hovercraft on the island, along with the interior defensive sites, are equipped with Single Autoblasters. The guns are Autofire only, +4 to Hit, and are -4 per Strat Hex (or -1/12") when Autofiring. They do 10D6 when they hit. The guns on the hovercraft are manned by gunners who are SPD 3 and OCV 5. The defensive sites inside the island are computer controlled, OCV 6, and may fire whenever triggered by the computer. All of these weapons are exposed when firing and have DEF 4 and a BODY of 4. Defensive sites inside the complex are normally hidden until they fire. They may be spotted with X-Ray Vision or Microscopic Vision with a normal visual Perception Roll or by making a Security Systems Roll.
LASER CAGES: At several points inside the complex the computer may trigger Laser Cages. These cages consist of a large number of overlapping laser beams that form a grid to all sides and on top of a character. Any character attempting to break out of a Laser Cage will take 1D6 separate 1D6 Killing Energy Attacks.

The individual laser projectors that produce the net are very fragile, and have only a DEF of 2 and 1 BODY apiece. The laser projectors are all outside of the laser net, so the character must have a ranged attack, stretching, telekinesis, or some other means of getting through the holes in the net to break a projector without being zapped.

Due to the spacing of the net, a character with Shrinking may subtract 1 from the number of times he is hit for each level of Shrinking. The Laser Cages act as any other computer controlled weapon, OCV 6, and are able to fire any time they are triggered by the computer.

COMPUTER FIRE CONTROL: The Defensive Operations Computer on the island has control of a large number of different weapons and devices. The computer is SPD 12 and may do one thing every segment. The computer is considered DEX 0 when you’re figuring out when it executes in a phase. Any time the computer is in a situation where it must move by phases it may activate one piece of equipment every time it executes. Therefore the computer may only fire one of its guns, sound one alarm, close one bulkhead, give instructions to one supervillain, or any other single action every phase. All computer controlled weapons have a base OCV of 6.

MAP KEY

Again, space considerations prohibit us from including a Champions II-style Headquarters cost sheet for this island. Consider that Dr. Destroyer has 50 more points than he’s shown as having at the end of this adventure, and that 50 points (naturally) have gone into the Mastermind option for this headquarters.

Six maps are listed in the following pages. The symbols of the maps have been standardized for easy reference. Below are listed the different symbols, their real names, and their basic effect:

<table>
<thead>

</table>
THE ISLAND

The Island of Dr. Destroyer is shown on the GM's Strat Map. Each Strat Hex is 50 meters or 25 tactical hexes across. The key gives a basic description of the terrain on the island. A more complete description is given below.

If the players ask for it, the GM should hand-draw them a crude version of the map, showing the coast outlines, the various types of terrain, and the locations of the villa, runways, and dock. Naturally, the hidden features of the island should not appear on the players' map.

Here are the various effects of different types of terrain:

**CLEAR**: All blank hexes on the island are considered to be clear terrain. Clear terrain hexes are mostly covered with grass and small bushes that provide little or no cover. Movement over clear terrain is normal.

**FOREST**: All hexes on the island that are covered with the tree symbols are considered to be forest hexes. Forest hexes are thickly grown with tall (4" to 6") trees and some high (1") brush. Forest hexes have considerable available cover but may impair ground movement and low-level flying.

**MOUNTAIN**: All hexes on the island covered with the regular dot pattern are considered to be mountain hexes. Mountain hexes are covered with large (2" tall) boulders and deep (3" to 5") clefts. Mountain hexes have no ground cover and uneven rocky surfaces that may impair ground movement.

**ROAD**: The road hexes running out of the Doctor's villa act as transport lines and runway for Dr. Destroyer's aircraft. The hexes containing road are open, with a 10-hex-wide paved road running through them. All underbrush has been cut away around all roads and movement and visibility in road hexes are normal.

**BEACHES**: The irregular dot patterns in three places around the edge of the island represent beaches. The beaches are unpacked sand and a great impairment to ground movement. Little vegetation or cover exists on the beaches.

**CLIFFS**: The island is ringed on nearly every side by high (4" to 9") cliffs. The cliffs on the perimeter of the island empty into bubbling surf. The cliffs on the interior of the island are normally shorter (3" to 5") and could be scaled at 1" per turn by anyone. The cliffs ringing the island can only be climbed by characters with Climbing or Clinging, at the normal movement rates for Climbing or Clinging.

**OCEAN**: All open hexes surrounding the island are ocean hexes. The ocean around the island is usually calm and deep. Sharks have been known to inhabit the waters on the mountain side of the island. The water is always clear and warm; characters may swim normally.

**VILLA**: Hex Z-21 contains the Doctor's villa. The villa consists of a ten-room house and an attached garage. The villa is fully described in the Tactical Map descriptions.

**THE DOCKS**: Hexes Q-28, R-29, and S-30 contain the docks and the Doctor's yacht. The docks are six tactical (two-meter) hexes wide, and a total of 50 tactical hexes long. The docks are strong enough to support one hovercraft loaded with people and cargo. Dr. Destroyer's yacht is described under the Vehicles section.

**DR. DESTROYER'S VILLA**

Hex Z-21 on the Strat Map contains the Doctor's villa. His villa is a ten-room house with a massive attached garage. On the outside, the villa is Spanish in style, with stucco walls and a tiled roof. The Spanish styling is only camouflage for a neo-gothic interior. The inside of the villa is decorated in dark woods and antiques. Each room of the Villa on the tactical map is numbered and each room is described below.

1) **KITCHEN**: The kitchen is a clean, white, modern facility. It contains long counters and cupboards along the walls. The counters are interrupted by a large refrigerator, a large freezer, and a dishwasher. In the northwest corner of the kitchen there is a massive stove. This stove is actually a cover for one of Dr. Destroyer's secret escape elevators. The elevator leads to the complex below. The stove is actually counterbalanced and on tracks so that it swings up easily and out of the way.

2) **DINING ROOM**: The dining room is furnished with oak panels and ancient tapestries. The room is dominated by a massive oak dining table and 12 chairs. A crystal chandelier hangs in the center of the room. The chandelier is secretly also a projector for a Laser Cage.

3) **LIVING ROOM**: The living room is a comfortable area with warm paneling and dark golden carpeting. The room is furnished with two couches, three easy chairs, and assorted tables and bookcases.

4) **THE MISTRESS' BEDROOM**: This bedroom is where the Doctor entertains his very special guests. If Option #2 is used, this is the bedroom of Natasha Alexandrovna. The room includes a four-poster king-sized bed, night stands, dressers, and a full-length mirror.

5) **SMALL BEDROOM**: This is a guest room where a guest can stay. It contains a bed, dresser, and bookshelf.

6) **THE ENTRY HALL**: The entry hall is a lavish, formal room with paneled walls and glass cases filled with crystal works of art. Dual coat closets flank the front door. The massive crystal chandelier in the center of the room hides a Laser Cage Projector.

7) **THE MASTER BEDROOM**: This is Dr. Destroyer's own bedroom. It is all paneled in oak, with burnt-orange carpets and accessories. A king-size bed and large dresser fill one
half of the room. A large bookcase dominates the other side of the room. This room has no overhead light, is only dimly lit when it's not completely dark, and contains no mirrors.

(8) SMALL BEDROOM: Same as (5).

(9) THE POWDER ROOM.

(10) THE STUDY: This is the Doctor's favorite room. It is paneled in dark oak and has thick golden carpeting. A giant desk is near the back wall, with a grand piano nearby. For normal access to the underground complex, the entire study can act as an elevator to a similar spot 10" below. For emergencies the chair behind the desk sits on a special escape elevator to the lower complex. The walls are covered with bookcases, and the piano sits in the corner of the room. Two separate autoblasters are hidden in the walls in the corner of the room. Music is almost always on in this room, either through the sound system or from the Doctor's own hand.

(11) GARAGE: The garage is a large area that is dedicated to the storage and repair of Dr. Destroyer's combat vehicles.

The garage includes hoists, tool benches, and engine stands attached to all of the walls. The center of the garage is a large elevator for raising the Doctor's supersonic aircraft up to the runway level. The floor of the garage lifts up to make room for the plane from below. The roof of the garage can swing open to allow the attack helicopter to take off, or to make room for raising the airplane. Four separate autoblasters are mounted near the corners of the garage.

THE UNDERGROUND COMPLEX

Dr. Destroyer has dug out a massive underground complex to secretly house his operations. The complex is dug 10" deep out of solid rock (20 BODY, 4 DEF per inch) and is totally sealed against chemical or biological attacks. The outer walls of the complex have all been coated with a special radioactive alloy that keeps desolidified people from getting into the complex (in essence, a Force Field that affects Desolid). Everything possible has been done to proof the complex against conventional and unconventional attack.
THE HANGAR

This hex is also Z-21 on the Strat Map. It is the underground hangar and entrance to Dr. Destroyer's complex. This hex is 10" under the Doctor's villa. The aircraft hangar is under the garage. Each room in this hex is numbered and is described below.

(1) CORRIDOR: The beginning of the corridor that runs for ten Strat Hexes to the Launch Control complex. The corridor is 5" tall and has specially hardened walls and floor (i.e., BODY 8, Def 8 hardened against armor-piercing or Find Weakness attacks).

(2) SECRET ACCESS: This corridor runs from the bottom of the kitchen's escape elevator to the main corridor. The bulkhead at the end of the access is easily openable from the inside.

(3) LABORATORIES: These rooms are Dr. Destroyer's personal laboratories. They contain racks of different chemicals, electrical components, and lab equipment. The rooms are sparkling white, very clean, and are air-conditioned with a slight overpressure to keep out contamination.

(4) LOWER STUDY: This is the room that Dr. Destroyer's study occupies when it is down on the complex level.

(5) WORKSHOPS: These rooms are the Doctor's personal workshops. Here is where he builds the prototypes of his newest inventions. These rooms have gray walls and floor. They are untidy, with parts scattered on two main tables. The walls are covered with bins full of computer chips, metal strips, and particle emission units. Several unfinished inventions lie on the tables.

(6) HANGAR: This is the room where Dr. Destroyer's small supersonic transport aircraft is housed and serviced. A small ground truck is also kept with the aircraft to assist in parking. The hangar is messy, with a half-rebuilt engine attached to the engine stand against the back wall. The other walls are covered with special equipment and tools for servicing the aircraft. Four autoblasters are secretly mounted on the walls near the corners. The plane has a door on the right side near the forward canard. The personal elevator for the troops and technicians is directly behind the elevator.
THE MAIN CORRIDOR

The main corridor runs through the Strat hexes marked 1–9 on the GM’s map. It runs from the aircraft hangar to the Launch Control complex. All of the Strat Hexes of the main corridor are generally similar in layout. The hexes do differ in what is housed in each room. Each room of the Main Corridor map is numbered, and the different rooms are described below. Therefore, a number designation that looks like this: "ROOM 1 -" indicates the room, while a designation that looks like this: "Hex 4, Cafeteria" indicates the Strat Hex. For example:

ROOM 1 —
Hexes 1-3, Storage.
This means that Room 1 on the corridor map is a storage facility in Strat Hexes 1 to 3 on the Strat Map.

ROOM 1 —
Hexes 1 – 3, Storage: These rooms are 3" tall and filled with boxes. The boxes contain computer parts, rocket components, food, video games, and the other things necessary to run a large complex. There are lift trucks near the doors of the rooms, and the lights are normally kept off.

Hex 4, Recreation Room: This room is 2" tall and contains cable TV, ping pong tables, video games, and other recreational devices. There are couches and tables scattered around the room. This room is painted a cheery combination of yellows and oranges.

Hexes 5 – 9, Assembly Areas: These rooms contain large tables, hoists, and welding rigs for assembling the missile. Hex 9 has special facilities for assembling the missile’s nuclear engines.

ROOM 2 —
Hexes 1 – 3, Fabrication Areas: These rooms are where missile parts are made. They contain metal lathes, drill presses, shapers, and other machine tools. These rooms are dirty, with metal filings on the floor and dirt on the walls.
Hex 4, Cafeteria: These rooms are filled with circular tables, steel chairs, vending machines, and microwave ovens. The walls are white and light green. Posters cover one wall.

Hex 5, Electronic Testing: These rooms contain scopes and digital testers for checking and repairing electrical equipment.

Hex 6, Computer Testing: These rooms contain large numbers of disk drives, computer terminals, and readout screens for checking out computer software.

Hex 7, Missile Testing: These rooms contain stands for supporting the full missile so that the rocket body, fuel systems, and guidance systems can be tested.

Hex 8, Hypnoray Satellite Testing: This room contains lab animals and electrical equipment for testing the Hypnoray satellite.

Hex 9, Nuclear Engine Testing: This room contains engine stands, radiation suits, and fuel tanks for testing nuclear engines.

ROOM 3 —

Corridor: The main corridor that runs from the Hangar all the way to the Launch Control complex. The corridor is 5" tall and has two autoblasters in the walls and three laser cages hidden in the ceiling. At the beginning of each corridor hex there is a massive sliding bulkhead designed to seal the complex in the event of a Red Alert. The bulkheads may only be opened from the Launch Control Complex and have Def 10, BODY 12.

ROOM 4 —

Hexes 1–5, Trooper Dormitories: These rooms house Dr. Destroyer's 200 mercenaries. The mercenary troopers bunk 12 to a room and the mercenary officers are housed three to a room. The rooms are furnished with steel tube chairs, bunk beds, and desks. The rooms are 2" tall and painted a dull gray.

Hexes 6–8, Technicians' Dormitories: These rooms house the 70 technicians at six to a room. The rooms are furnished like the trooper's rooms and include a computer terminal and drafting boards.

Hex 9, Supervillain Dormitories: These rooms house the supervillains Dr. Destroyer employs, two to a room. Each supervillain has a cedar bedroom set and a common couch, one wall.

ROOM 5 —

Hex 1, Detention Center: This room is where the Doctor keeps all of his prisoners. Only the supervillains and Dr. Destroyer can open the computer-operated voice lock on the Detention Center bulkhead. Prisoners are kept in one-hex cells with Force Field walls; the Force Field can take 16 BODY, but more will make it collapse. A collapsing field will cause the alarm to sound and the Computer will register four Events. No prisoners start the adventure in the detention center, but captured characters will certainly be brought here.

Hexes 2–5, Weapon Lockers: These rooms have all of the weapons for the troops. Only officers and Dr. Destroyer can open the bulkhead doors to the Weapon Lockers.

Hexes 6–8, Tool Lockers: These rooms contain the tools and equipment that the technicians use. The doors to the main corridor are not full bulkheads, just normal doors (Def 3, BODY 3) and have only a simple lock.

Hex 9, Robot Sanitation: This room contains sanitation, mopping, and vacuuming robots. The robots are small, clean the entire complex, and have access to every room. They have Def 2 and BODY 1.

THE LAUNCH CONTROL COMPLEX

The Launch Control complex is the brain of the Island of Dr. Destroyer. The controls for the Defensive Operations Computer, the nuclear reactor, the missile fueling, and the missile launch are all in this room. Each separate piece of equipment is numbered on the Launch Control Map and is described below.

(1) THE MISSILE SILO: The missile, with its hypno-ray satellite, is set up in this silo. The silo has a lead glass viewing window into the control complex. The silo has a pair of vents on each side of the satellite. The exit of these vents is camouflaged on the surface (except, of course, during launch). Starting six segments before launch, the vents will open to let the missile exhaust escape. Any character in the silo during launch will take 25D6 damage per segment and be exposed to massive amounts of radiation.

The missile itself is divided into two sections. The upper thin section contains the hypno-ray satellite. The satellite has Def 6 and BODY 4. The lower, fatter section of the missile houses the nuclear reactor and its monatomic hydrogen fuel; this lower section also has Def 6 and BODY 4.

If the lower section is destroyed, the missile and its nuclear engine will explode — and we’re talking about a low-yield nuclear blast destroying all facilities, characters, etc. within 20 Strat Hexes. Naturally, in grand comic-book style, if the missile is destroyed even Dr. Destroyer will pale and try to escape, red lights will flash, an alarm that sounds like a banshee will sound, and every mercenary, supervillain, and technician will beat a path out of the complex. This should give the characters some clue that something is wrong.
To determine how long it takes for the missile to explode, roll the Luck of every character in the room (including villains and unconscious folks). The characters will have at least 12 seconds (one turn); for every 6 that comes up on the Luck roll, the characters have an additional full turn (12 seconds) to get away. Outside the 20-Strat-Hex radius, damage done is 10D6 killing damage, minus 1D6K for every extra Strat Hex away. There is no way to stop the explosion, but successful Computer Programming or Nuclear Physics rolls made by a character at a working console or at the missile will reveal the time until explosion, and a successful Nuclear Physics roll at the missile might actually slow the process (Difficulty is -5 to the normal roll, and then every 1 by which the roll is made will delay the explosion another full turn). And if the characters don’t get away — well, either you, as GM, can skew things so they survive, or you can let them die. GM’s choice. They were warned.

When the missile is launched it will be stationary for one segment. From each segment on, it will accelerate upwards at 10" per segment. While underway the full rocket has a DCV of 8. The upper section has a DCV of 10. While stationary the full rocket has a DCV of -3 and the upper section has a DCV of -1.

(2) MISSILE CONTROL CONSOLE: This console is used to direct the launch of the missile. The console has a Def of 4 and BODY 8. If the console is destroyed, the missile may still be launched from Dr. Destroyer’s Master Console (5). Starting six segments before launch, the missile goes on internal control and will complete the launch itself.

(3) NUCLEAR REACTOR: This small reactor provides power for the station and a nuclear charge for the missile’s engines. This reactor may be directly viewed from the two-meter thick lead glass viewport. The reactor is normally controlled by the reactor control console (4). If the console is destroyed, the reactor will melt down in 1D6 full Turns. A meltdown will flood the complex with radioactive fuel, acting as a 20D6 normal attack with no defense (characters with Force Fields or 25 pts. in Life Support are not affected).

The reactor may be controlled by the manual control rods to the right of the view window. The reactor must charge the missile’s nuclear engine 20 segments before the launch. The missile will be fully charged six segments before launch.
(4) REACTOR CONTROL CONSOLE: This is the main operations control for the nuclear reactor. The console has a Def of 4 and BODY 8.

(5) DR. DESTROYER’S MASTER CONSOLE: This console can monitor the entire launch procedure. If any console is made inoperative, the launch may be continued from the master console. This console has a Def of 10 and BODY 8. The console may also view or override the sensors and the Defensive Operations Computer. The Doctor may fire any computer-controlled weaponry at his own SPD and OCV.

(6) MISSILE FUELING CONSOLE: This console controls the fueling for the rocket from the Monatomic Hydrogen Tank (8). The missile must be fueled shortly before launch because the fuel is very unstable. Fuel will be directed into the missile starting 30 segments before the launch. The missile will be fully fueled by six segments before the launch.

This console has a Def of 4 and 8 BODY. If it is destroyed during fueling, the monatomic hydrogen flow will not be controlled and will begin to heat. After 4D6 segments, the fuel tank will explode as a 25D6 energy area-effect attack to the entire control room. Anyone behind a console will be able to subtract the console’s BODY and Def as a defense. As with the destruction of the lower part of the missile, fuel overheating will tend to cause villains in the know to panic and get to safety, perhaps tipping the heroes off that all is not as it should be.

(7) THE DEFENSIVE OPERATIONS CONSOLE: This console provides operator control for the Defensive Operations Computer. The console also acts as the communications center for the complex. A large screen on the wall can display an overview of the island, or the view from any sensor. This console has a DEF of 4 and 8 BODY. If the console is destroyed, the Defensive Operations Computer will shut down until restarted from the master console.

(8) MONATOMIC HYDROGEN TANK: This supercooled tank contains the fuel for the missile. If the tank (or any of the fuel feeder lines) is breached, the tank will explode as described in (6).

THE LAUNCH

Dr. Destroyer has been waiting for a proper launch window to fire his missile. Naturally, the exact timing of the launch is up to the GM.

If it looks like the adventure is going to be a long one, the launch might be several hours after the characters land. An example of this sort of adventure is when the heroes stealthily infiltrate, running around subverting supervillains and the Doctor’s mistress, get captured, escape, etc.

If a fast adventure is in store, the launch will probably be soon after the players land. This sort is usually characterized by a fast, efficient player-character penetration of the island defenses; the player-characters tend to find the underground complex fast, zoom through the defenses, and hurl toward the climactic battle with the Doctor.

To determine which it’s going to be, simply don’t decide at what stage the launch-plan is until you see how the players are doing.

Most of the time, you should subtly manipulating things so that the launch will be ready to happen just as the players get to the Launch Control complex. You should use the imminent launch of the missile as a tool to build tension.

OPTIONS

This section gives you some options to add to or subtract from the difficulty of this adventure, or otherwise alter it to your taste.

(1) THE SPY: UNTIL’s Agent Zed was captured, not killed by Dr. Destroyer’s men. He is being kept in the Detention Center. If the heroes rescue him, he can tell them the code for getting past all the bulkheads and exactly which supervillains are on the island. He can give them a general idea of each villain’s capabilities, and he is also capable of flying the Doctor’s plane. His real name is Ralph Baxter.

(2) THE DOCTOR’S MISTRESS: The Doctor has a mistress who is devoted to him, but who does not want to see him conquer the world. She can reprogram the computer from a terminal in the Doctor’s study so that it will ignore the heroes on its sensors. The reprogramming will take her ten turns. The mistress, whose name is Natasha Alexandrovna, will not help the heroes to harm the Doctor in any way, and may betray them if she thinks they will harm her beloved.

(3) THE SUPERVILLAIN TRAITOR: One of the supervillains has found out that the Doctor’s hypnoray will control him, too. If asked, he will help the superheroes stop the Doctor. The other supervillains might even help the superheroes, if they could prove to them that the Doctor’s hypnoray will control them too. The proof is buried in the Doctor’s computer files, and could be extracted with a successful Computer Programming roll at -2, and ten turns of computer time.

(4) NO SENSORS OR COMPUTER-CONTROLLED WEAPONS: If you’re running underpowered or inexperienced characters, you can make things easier for the heroes by assuming that the Doctor never installed either his sensors or his computer-controlled weaponry.
(5) MORE VILLAINS: On the other hand, if you're gamemastering really experienced or rugged heroes you can simply toss in more supervillains to help the good Doctor.

WHAT TO DO IF THE HEROES LOSE

What happens if Doctor Destroyer wins and the hypnoray satellite is successfully launched? The world becomes his stomping-ground — or does it?

(1) RESISTANT HEROES: Instead of assuming that the hypnoray satellite is just a deus ex machina all-powerful device, define it in game terms: For instance, Mind Control (worldwide area effect), 23D6. Whew! This means that any character with up to a 20 EGO (assuming no EGO Defense) will be under the total mental domination of Dr. Destroyer. However, some characters have higher EGOS or 20 EGOS with EGO Defense. In other words, they'll be partially or fully resistant to the effects of the satellite, and may constitute the next party of heroes to go in to the island.

Dr. Destroyer was originally Dr. Albert Zerstoiten. Zerstoiten was the secret mastermind behind the Nazi nuclear weapons program. Months before his secret unit was ready to test its device, Hitler, in one of his more paranoid moments, had the entire unit shot. Zerstoiten escaped with the help of the French underground. The doctor betrayed the underground unit to the SS in exchange for passage to Argentina. He boarded his passport to freedom just weeks before the armistice was signed.

While he was en route from Germany to Argentina, a British Light Aircraft Carrier found the ship and ordered it to surrender. The ship made a run for it and was torpedoed by British torpedo bombers. Zerstoiten was caught in a massive fire and had a large percentage of his body burned. He was rescued by the crew of the carrier and taken to Britain. Months later, he was released from his medical care and was sent to the US.

In the United States he was reunited with many of his former colleagues, German rocket and nuclear scientists. However, he was never fully accepted because of his bizarre theories, arrogant manner, and grotesque looks. In a rage, he stormed away from the US and attempted to set up a personal research station in Central America.

In Central America, Zerstoiten found a niche of sorts. He set up a laboratory and began selling explosives to revolutionaries. Here he gained the name Dr. Destroyer. While in Central America, he made a massive fortune by investing in companies that would profit from the revolutions he supported. Finally, in the late '60s, he was kicked out of Central America by a revolutionary committee who thought he was too dangerous to stay around.

From Central America the doctor moved around the world, establishing contacts and selling his expertise to underground and criminal laboratories. Several times, he worked with an underground laboratory, stole all its original research, killed the scientists and burned the laboratory to the ground. This ruthless manner earned him no friends but gained him a fortune which grew exponentially until he had nearly unlimited wealth.

By the late 70s, Dr. Destroyer had access to unlimited funds, unknown technical secrets, international criminal contacts, and his own brilliant mind. He purchased a small island in the South Pacific to act as his headquarters. He utilized technical secrets he'd uncovered and stolen to build a suit of armor to hide his still-hideous features and augment his aging body. He used his criminal contacts to recruit a mercenary army. And he utilized his own incredible intelligence to create the ultimate mind control device, the hypnoray satellite.

Now Dr. Destroyer sits in his island fortress, preparing for the missile launch that will make him ruler of the world. He plans his revenge on the system that rejected him, the people who shunned him, and the world that hunts him still.
